2469. SBE Engineering....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-05 00:00:00 UTC
From: jerryk@best.com
Message-ID: <71t38a$p43$1@shell13.ba.best.com>
Source record: 95449

Hello,

Back in the 70's, I had an SB-33 transceiver as my main ham rig. That
was long ago....

Last week, I was fortunate enough to acquire an SB-34 with its companion
SB2-LA linear for the low price of one hundred bucks. Whee! Of course,
when I got it home, it didn't work :-(. The problem was quickly traced to
a couple of open transistors, and I was on the air. :-) It's so nice to
work on stuff that I can actually _fix_, as opposed to running diagnostics
and replacing boards.

Anyway, I was reviewing the manual, and was struck by the quality of
engineering in that little radio. I would guess that it bears the mark
of a single gifted engineer. Circuit tricks within include:

* The signal chain is "bi-directional". Transmit sigs go THIS way,
and receive ones THAT way, through the same coils, by virtue of
appropriate transistors being turned on and off.

* There are no relays in the set. Not one. Receive RF is gotten off
the tube side of the PI network through a 2PF cap, and the RF input
transistor is turned off by the "12V on Transmit" bus.

* They managed to get both USB and LSB with _ONE_ mechanical filter and
ONE carrier crystal! It was done by mixing the 455kHz SSB output
with the output of the carrier crystal - either doubled or tripled.
If tripled, the mixing was subtractive - so the LSB became USB. Wow.

* Bandswitching is done by an amazing, elegant, "Geneva dial" mechanism
that tunes a multiple section cap AND pulls cores in and out of a bank
of coils - the "switch" part of the bandswitch is only three wafers,
two in the final cabinet, and one for secondary oscillator crystals.

* The radio can be run either off 110VAC or 12VDC. For 12VDC, there are
a pair of doorknob transistors that form a pushpull oscillator, driving
a low-voltage primary on the power transformer. That's not too
unusual. The interesting thing is that for 110VAC, the same winding is
used... as a 12V secondary! And the same two transistors are used...
as rectifier diodes!

So, I was wondering - does anybody know anything about the history of
this company, and the person (or people) who designed the radio?

- Jerry Kaidor (jerry@tr2.com)

SBE was the "brainchild" of Faust Gonset. The company produced what had to be the most advanced ham radio transceivers of their time, including the SBE SB-33, followed by the SB-34 transceivers. They were proably the first truly "portable" SSB transceivers, using hybrid design techniques and high-quality components. The company was sold several times, owned for a period of time by Raytheon. After the SB-34, they produced an extremely limited edition transceiver known as the SB-35 (few reported to exist or even seen). Their final ham product was the SB-36 transceiver, again somewhat limited production, with several still around today (used "Nixie-tubes" for displaying frequency).

Tho the SBE rigs were known for "drifting", that problem could be solved with some modification and improved heat distribution from the driver and final amplifier tubes ("sweep" tubes). The Geneva movement used for tuning, and the bandswitching arrangement, was both quite practical and revolutionary.

Truly the SBE SB-series transceivers were far "ahead of their time". The company ultimately became a part of Robyn, a manufacturer of CB radio equipment (Japanese, I believe). SBE disappeared entirely from the ham radio scene, unfortunately, unable to survive the arrival and popularity of the Japanese-made ham rigs which flooded the shores of the U.S.

Source record: 95454

Greetings:
Amateur Radio doesn not suffer from insentive licensing. It suffers from people who lack the strength to aquireand achieve something with significant effort. It does not attract many these days because the computer age has made it posssible to contact people via e-mail and video without doing anymore than giving some provider their VISA card.

We must encourage the youth of today to venture beyone what just anyone can achieve and strive for excellence. Our schools have made a mess of this requirement. They say now " Everyone is a winner if they try". Excuse me only the first very few across the finish line are winners, all others are participants.

Sitting on our Ass complaining about Amateur Radio's decline is no way to prevent it from happening. We must teach out Children to strive for the difficult to achieve because it is worth much more than what is given out freely. We need to fix the fundimintaly problem in Society today, the Dumming down to allow underachievers to get the medals they do not deserve.

The Baseball, Baskenball, and Football players that are not up to snuff sit on the bench. They do not get what the real ' Kick Ass" winners get. If you want something great out of life you have to put something in.

Regards
Don W6PJJ

Source record: 95497
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors

I got my novice in 1974 at the age of 15 and my first rig was a Johnson Adventurer 50 watt CW transmitter with a Johnson VFO with a Heath HR10 receiver. I got the transmitter and VFO from the local ham who administered my novice test (in those days novice tests were given by another ham at his house) and I bought the Heathkit new. I used a 40 meter coaxial fed dipole on 40 and 15 and my first QSO was with a station in Maryland.

Shortly after that I picked up a Hallicrafters HT-40 tx, SX-140 rx, and HA-5 VFO (I think that is the correct numbers). It was Hallicrafters novice rig. The receiver was much better than the Heathkit and, besides, it was a matched set and looked cool.

So, although that wasn't the rig I started out with, that is what I think of as my novice station. I wouldn't mind picking up another one of those sets.

Thanks for letting me replay some memories.

Tom

A friend of mine is currently looking for any old tube type 10 meter transmitter from the forties, fifties, or sixties. He prefers an AM transmitter with medium to high power. Any brand of amateur or military radio would be fine. He likes working on this type of equipment, so it does not have to work. It should be complete, and free of damage or significant corrosion. Amateur 80-10 transmitters are fine also.

Thanks Jim ferguson@telerama.com

But Rich, what about all those technically handicapped extras who have
done nothing worthy of recognition except for their paper licenses and
paper certificates? Have a little mercy on and pity for the technically
handicapped extra hams, will you? They apparently can't help it. :-)

Actually millions of years longer than that. :-)

> Personally, I think part of the problem is that homebrewing is dead.
> It's hard to build a serious rig when every component in it is micron
> sized and microprocessor based.

Actually homebrewing is easier now than then. Integrated circuits
have taken much of the toil out of homebrewing and microprocessors
are easier to program than electronic circuits were to design and
build. Digital radios are just down the road. Digital is easy.
If it's not a 'one' or 'zero', it's broke.

> Part of the allure for me as a ham in
> the 60s was building my own gear. That was an incentive for figuring

Get after it. Change with the times. It's easy. I do it all the time.
I just bought a DSP evaluation board.

> It's also hard to work on modern rigs, and generally the fix is to find
> out which black box in the set needs replacing and replace it. Big fun.

So it's a challenge. Get after it. If it's worth repairing, I fix all
my own electronics stuff. The only time I ever sent anything back for
repair was when my IC-745 lost its program memory which was in RAM.

Let's hope so.

For now, remember the obvious benefit of the shill--
running an item's price up by hundreds of dollars.

The downside -- the shill is high bidder and his
partner, the seller, has to eat the auction fee.
And this is the worst-case scenario.

And the shill can still offer the next highest bidder
the item at their last bid price, saying his wife
didn't want it in the house. The seller still comes
out hundreds ahead, but just not hundreds plus the
auction fee and the last bid increment.

From where I sit, the risk of a shill blowing a sale
completely is very low compared to the benefits, as
long as ethics don't play into the picture.

Ebay -- where ethics are on sale every day for 95% off.

As I stated in an earlier post, evidence of bogus bidding is at best circumstantial. The seller advises me that he was paid for the item, and I take him at his word. He's happy. The buyer is happy. I'm happy.

It sounds like what you're looking for here is a device called
an "L-Pad"... maintains a constant 8 ohms on the input side, but
you can variably tap off volume to the speaker. Looks like a
big wirewound potentioneter (units are rated according to power
output).

Yeah, but when you've seen one 'one', you've seen them all, and heck it is the same thing with one 'zero'.

What about if it is a 'one' and spose' be a 'zero' I guess your, going to say it is broke too.

And I spose someone is going to come along and remind us this has nothing what so ever to do with boatanchors (Unless you've seen a T-2 Airforce computer [processor]) hi hi

My first rig was a used Heathkit AT-1 transmitter and a little National SW-54 receiver. Put up a big 40-meter groundplane antenna, about 30 feet of 1-inch thick aluminum tubing straight into the air, with radials dug into the ground, half-way around the neighborhood. This was about '57 or '58; my call was KN5QWG. And I used to spend hours, every Saturday morning, going up to Crabtree's Electronics over on Ross Avenue (this was in Dallas) to look at the dream Hallicrafters and Collins and National rigs.

Later on I moved up to one of the little surplus ARC-5 receivers, a BC-45-something that tuned from 7 to 10 megacycles; along with an Ameco 6-meter transverter, and a homemade 5-watt 6-meter phone rig, made from instructions in a W6SAI article. The late-1950s 6-meter openings were a thing to behold; one minute nothing, the next, dang, there was Kansas City and points North, all over the receiver.

Them was the days...

[== NEED HELP for HP 8553B RF unit for HP 141 Spectrum Analyzer ==]

I recently bought an HP 141 spectrum analyzer with a 8553B 110 MHz
RF module. I was cleaned the face of the units with rubbing alcohol
(which apparently was a mistake). Then next day I found the left
half of the frequency display window ruined :-(. Apparently the
alcohol caused the ink on the plastic window to run.

I need to know if a new set of the frequency display "windows" can
be obtained. I do not have any manuals for the 8553B, so wouldn't
know where to start trying to talk to HP. If any one can provide
assistance, I would very much appreciate it. I would like to
know what the part numbers are and how to obtain them and if they
are available...

>> there is little hope of reversing it.

>Just remember that eventually the tide turns the other way.

Real tides are periodic, and always turn the other way.

"The tide turns" as a metaphor for changes over time often does
not change direction. When the tide turns in a military battle,
the side that just went from winning to losing often goes to
eventual defeat.

It seems to me that there are two problems with retaining the
experimental side of the hobby: One is that commercial gear is
so much more sophisticated than it used to be that it's essentially
impossible to built competitive equipment at home. Thus, experimentation
is now something people do because they like experimenting, or because
they want to explore a mode or a technique not available in commercial
radios. People no longer build radios just to use them to communicate -
they buy a radio instead. So the set of experimenters is much smaller.

The other problem is that the rules seem to be set up to discourage
experimentation. Imagine if 1/3 of the bandwidth of every ham bad
was set aside for "non-traditional" modulation schemes. CW, AM and
SSB voice, and FM voice could be forbidden, along with any data
transmission using standard 1200 and 9600 bps modulation. There
would be an additional incentive to try something new - that's the
sort of incentive that would make a useful contribution to the hobby.

Great answer. It should be kept and posted as a standard reply to those hams who say amateur radio is going down the tubes and we are all now appliance operators. I maintain that homebrewing is no more difficult now than it was in the 50s or 60s. It is just *different*.

We can't build 'cuz it's too hard. Whine, Whine, Whine. Woe is
us. Actually, building and experimenting is easier than it
ever has been because the tools are so much better than they were
in the past. A PC can do for us in seconds what took many hours of
manual/mental/trial&error effort in the past.

What keeps people from simply duplicating designs from 40 years ago?
All the parts are still available.

> The other problem is that the rules seem to be set up to discourage
> experimentation.

Yes they are. The Morse code requirement is a good example. The time
spent learning Morse code would be much better spent learning
electronic theory and how to experiment. As a Return On Investment,
for the average ham, the Morse code requirement has proven to be next
to worthless for the past 30 years. If I had a stock which promised
salvation during emergencies and didn't deliver, I'd sell it, give
it away, or burn it.

2515. I-177 Tube Tester Info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-06 00:00:00 UTC
From: Chris Clotworthy <chris@clotworthy.freeserve.co.uk>
Message-ID: <71vjn4$7o7$1@newsreader2.core.theplanet.net>
Source record: 95274

Hi -

I recently obtained an I-177 tube tester here in the UK, along with the valve data book in the lid, but without an operation manual. Could somebody kindly email me a short summary of the operating instructions, particularly in regard to the mode switch, marked 1,2,3,4,5 and Tube Test, and the other push-buttons, in testing normal valves.

Thanks in anticipation,

Chris Clotworthy GI7TEU

Marv OM,

We are living, now, in a Golden Age for ham radio homebrewing. Yes, that's right. I for have been building CW and FSK transmitters, receivers, and most recently a phasing type DC receiver, which works beautifully. Much easier than the Old Days, which I remember well (at least back to the early 50's). No chassis work, no high voltage, no metal work, etc. Integrated circuits take much of the drudgery and detail out of building rigs. The reason there is less homebrewing now is LACK OF INTEREST AND MOTIVATION, that's all. Most of the folks who claim you cannot build anything today are the ones who do not do it, so they know not whereof they speak at all. I have found parts to be plentiful and cheap. I am well into the bifocal age myself and find that I can handle SMT components fairly well. Just use good light and a magnifier if needed; it is done every day by those that you seldom hear from. We are currently in a resurgence of homebrewing activity.
Like every other activity in life, when it comes to ham radio, one is either technically interested, or not. One's daily activity reveals what their interests really are.

K0MB,

Personally I find ham radio just as interesting and rewarding today as when I started 43 years ago. I spend about 1-2 hours operating every day, mostly on 40 CW, and the variety and quality of operators there, is very similar to what I found back then, although the bands are often a bit more crowded of course. I still enjoy tinkering with rigs and circuits and do a bit of homebrew on receivers and transmitters, just as I did when I was 15 years old and a novice. In fact, I have recently found that 're-discovering' old designs and building them afresh brings back much of the original excitement I had when I did it the first time. Ham radio: ain't it the greatest? You betcha.

>
>Them was the days...

Yeah. That's where I started, with an ARC-5 from "Surplus Sam's" in Los Angeles, and a homemade transmitter using a single 6V6. You picked your ARC-5 from a pile about 6ft. high, hoping you got a good 'un. Spent many hours with a J-38 on 40 meters. My antenna was a vertical with buried radials. W6LX showed me how to build it, and gave me my ham exams. Suspect W6LX is long gone by now, he gave me the exams in 1954. Later I ran a CD net on 6 meters, using a homemade transmitter and a converter into a Hallicrafters SX-28A.

Just recently got my license again after an absence of 40 years. Am now building a vacuum-tube transmitter, and restoring an SX-28. Looking forward to pounding brass again.

My feelings are that radio was more fun (when I was young) because it was new and different. I still remember the excitement of merely tuning in WWV on each new receiver I could get my hands on. The thought of signals, traveling thousands of miles without wire, was just fascinating in it's own right.

Later, after getting into the 2 way business, radio communication became old hat and just plain work at times. I don't spend nearly the amount of time I used to, in front of a shortwave set, because I listen to "noise" all day long at the office.

That faint remaining glow is still there, so I have one or two older sets that I turn on from time to time, hoping to revive something deep inside. Of course, I can do the same with my "appliance" rigs but my childhood comes back when I do it with an old tube set and I can actually "enjoy" myself.

In answer to your question, no, the radios don't make or break your love for the hobby, changing interests and acquired knowledge and experience do. When's the last time you snuck out of the house to take a dip in that secret swimming hole your mother always told you to stay away from???

I nervously took my novice in late '61 from my Elmer and
sometime employer at the tv shop, Don W8FBX.

In December 61, conveniently just before Christmas, my
ticket arrived with call WN8BRS. Took my xmas money to
downtown Detroit's Reno Radio, where the beautiful, used
Eico 720 I pined for became mine. Used the 720 on novice CW
along with a Heathkit AR-3, which was hopped up with a
Q-multiplier. Like some other posters to this discussion,
I also used my 2 meter Novice phone privilege with a borrowed
2-er lunchbox and Cushcraft halo. After passing General (WA8BRS)
in fall 62, I got the Eico Plate Modulator (722?), and the companion
Eico 753 VFO. I also was able to join fellow East Siders on
160 AM with a converted ARC-5 from Silversteins surplus.
Later got a Heath SSB Generator and ticked off the locals on 160
by being (along with other teenage radio hooligans) one of the
earliest "donald ducks" on 160 SSB in my area.
Upped the receiver capability with an RME 4350/SSB adaptor/
preselector combo.
Had lots of fun checking out the used equipment shelves at
the various ham dealers that used to exist here, and going
to club meetings to swap equipment and find parts.
It's still fun to realize that a shoebox-sized piece of gear, using
less power than a toaster, and without assistance of international
communications cartels, provides a "natural," earth-assisted means
of sending my signal around the planet.

Robert,

This is a very nice base radio. It has many of the feature of the
FT1000
or the FT1, It was manufactured in the late 80's. It will work with
the FTV901R transverter.

I have been using one now of several years with many DX countries work.
Along with over 500 grids on 6 mtrs.

DON'T SELL THIS RADIO SHORT.

Bill, WA0KBZ

Thor,
Sorry about your dial. I doubt very much if hp will still supply these parts, but they do have this neat computerized service that will tell you that they are not available, if you call 1 800 227 8164. If they are available, be prepared for serious amounts of money. I priced a knob once for a laugh, it was $14.....

They have a parts ID service at 916 783 0804

As far as I can tell the fixed window is 08553-40105, the sliding window is 08553-40103.

Ed Matsuda (619 479 0225), does very good legible copies of the manuals for this stuff.

Good luck, and take it easy with the cleaning fluids :-)

Hey, I'm one of the people who would rather build something than talk
to other people on the radio. But just how many hams have you met that
have the technical resources to build something on par with a current-
day commercial transceiver? Particularly on their own? Very few.
Could they do it for the same cost (assuming that their labour was free)?
Probably not.

>What keeps people from simply duplicating designs from 40 years ago?
>All the parts are still available.

But the designs from years ago are not competitive with current
designs, at least in operating and display features. So people who
just want to talk to other people, and are fundamentally uninterested
in building things, just buy something. 40 years ago, they might have
built instead, because building was cheaper or better.

>> The other problem is that the rules seem to be set up to discourage
>> experimentation.

>Yes they are. The Morse code requirement is a good example. The time
>spent learning Morse code would be much better spent learning
>electronic theory and how to experiment.

Agreed. The other thing I had in mind when I wrote this was
how the old guard seemed intent on preventing the use of spread
spectrum if it might, just possibly, maybe, increase the noise floor
a little for their DX paper chasing. That's why I suggested setting
aside some bandwidth where traditional modes are banned and experimentation
is welcome. I can imagine the howl if it was ever formally proposed,
though.

Heath station (SB-104A) available for trade for 75A4 or 51J4 w/filters. Unit should have cabinet, original manual and be in excellent condition. Heath station has full output all bands. Transceiver and supply show little if any use. With accessory clock console, matching heath microphone, keyer, full manual pack. Heath package shipped to continental US location worth $750.

Actually I'd almost bet they do. Before I sold my 141T outfit earlier
this year, I ordered a couple of replacement parts for an 8554B from HP,
including the precision potentiometer that controls the tuning section.
They will charge an arm and a leg, but they seem to be much better than,
say, Tektronix, when it comes to stocking replacement parts for the
older products.

I do remember cleaning my 855x modules with stuff a heck of a lot
stronger than iso alcohol, and never saw any sign of trouble.

It doesn't have to be on a par with an IC-775.

> But the designs from years ago are not competitive with current
> designs, at least in operating and display features.

The easiest part of the radio is the operating and display features.
It is is a digital microcontroller. It can be done from a PC
using the parallel port. A good starting exercise would be to put
a standard transceiver under PC control. My ICOMs have a serial
protocol built in for that purpose. A DSP eval board will do serious
filtering and the PC development software comes with the board. That's
an excellent way to get started experimenting. TAPR has SIGs dedicated
to such.

There's absolutely nothing to keep hams from experimenting except
the hams themselves.

Source record: 95305

I have a nonworking Hallicrafter SX-100 for sale or trade. Cosmetically it is a nine on the one thru ten scale, electrically it looks good, nothing moded or chopped, arced over, etc. I don't have the time nowdays to begin to troubleshoot it, and can't find anyone in my area who will touch any type of radio (they only want big screen TVs and VCRs). I've checked out some of the experts online and don't want to go $38 per hr labor. Anybody interested I'm selling - best offer or am open to a trade.

"Frank N Beenz" <bigbadwolf1@earthlink.com> writes:
>Digital is easy. The theory behind making those one's and zero's do neat
>things like DSP isn't so easy. If hams whine about having to learn simple
>things like Morse Code, just think about the carnage that would result in
>trying to educate them in something as evil as math...

The thing is, DSP programming and math *is* interesting to some
people. Much much more interesting than learning Morse code. These
are the people we should be encouraging to become new hams.

Forget about educating people who don't want to learn new stuff - it's
a lost cause. Let them have their current licence priviledges until
they die.

But for the future, we should be trying to attract people who like to
experiment, not chase them away. If it's necessary to us an "incentive"
of extra subbands to encourage something, use it to encourage technical
proficiency and experimentation, not near-dead communication modes.

Radio was certainly fun in those days. That was mostly because we were clueless and everything was an "Ah Ha!" experience. As we learned more, those "Ah Ha!" moments became somewhat less frequent. For me, there was a period of a few years that I liken to the sophomore experience. That is to say, I thought I knew it all, and there were no "Ah Ha!" moments. Amateur radio didn't seem very interesting then. But now as I've grown older and gained a greater appreciation of just how much I still *don't* know, those "Ah Ha!" moments have grown more frequent again.

There is so much to explore, so much to learn and do, there's no way one can become bored or blase. Thanks mainly to modern technology, we can now attempt things that were unthinkable in the old days. That stretches the mental muscles and lets us experience again those "Ah Ha!" moments when we finally figure out how to do something new and different.

When we were starting out, that something might have been a simple oscillator or antenna. Today it might be the logic behind forward error correction, the nature of improved modulation design, or the electromagnetics underlying antenna behavior. But in any case, the fun has always been that moment when the light bulb goes on and you suddenly have an insight into how it all works. That's the best high in the world. For me it is the heart and soul of what amateur radio is about.

I've never been more excited about amateur radio than I am today. I bubble over with new ideas and new things to try. And today I actually can try them because technology has advanced so much that I can prototype an idea using functional blocks in a matter of hours instead of becoming mired at the mundane discrete component level and giving a project up as too complex as I often did in earlier times.

In 1966 it was a huge thrill to watch the sun noise rise and fall on the chart recorder from my first UHF tube receiver (WE416B preamp) and homemade yagi antenna array. That was the payoff of months of work. Today, I get a kick out of throwing together a

setup in a few hours to measure the doppler as Lunar Prospector
orbits the Moon, or when my little QPSK DSP setups make an
error free contact on 30 meters when I can't even hear the signal
in the noise. I know I'm doing something that even the professionals
considered a dream in the days when I started out. VLSI and
computer power have opened entire new realms of radio for us
to explore and conquer.

When I studied vacuum tube theory years ago--and when I had some practical experience with them not too much later--I don't recall the subject coming up about whether-or-not they could float in water.

Can they?

Want To Buy a Drake T4XB, AC-4, and a MS-4 Speaker. Would consider w/o speaker and maybe w/o power supply. I am looking for a VERY clean looking radio. It does not necessarily have to work. I can maybe fix that. BUT, the radio has to look original and be in great physical shape. That means very little chassis rust, original knobs with a good looking spinner knob disk. It means NO holes in cabinet, original paint with few scratches and a scratchless or near scratchless front panel. Do you have an original manual? What shape are the finals in? Does the radio have full output on all bands? As I said I can fix a broke radio but I'd like to know what I am in for if I buy your radio. If you have such an animal, please contact me. Joe,

I think I have one of those things. I got it about three years ago from
an FAA maintenance facility which had been downsized and the eqpt was in excess.
It had been recently calibrated and according to the tech's there it was working
and "on line" the day before I picked it up. It is 2 units, a scope unit and a
receiver/tuner unit, as I remember. It is set up to be rack mounted. I put it
in a hermetically sealed metal (ex-military) box and put it in one of my storage
sheds. Havn't looked at it since. If this sounds interesting let me know and I'll
go to the shed this weekend and get the numbers. I think it ran from 100KHz to
1.3GHz ?????? or something like that.

2571. KWM-2A LOADED COMMENTARY

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-06 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-981106014229Z-52@webmaster.eletrosys.com>
Source record: 95394

I am the seller, or was the seller of this really nice piece of equipment, along with a trailer load full of Collins that I am selling for an estate. I am amazed at the audacity of someone in this group that was declaring that I might have been bidding on my own stuff. Frankly I ought to be really angry about this, but I am only just amazed at how someone might come to such a conclusion. I have two email addresses in use, and only one of them on Ebay. My Ebay address is tsm@electrosys.com and this was a reserve auction so I am precluded from bidding on my own stuff and frankly would do so even in a non reserve auction. In my Radio Era Archives business, I use tsm@radioera.com. You will find neither of them on either this Ebay auction or any other as far as that is concerned where I am selling something except as referenced as the seller, certainly not the bidder. For persons to infer that I might have had a schill bid the price up is ridiculous. How could someone even come to such a conclusion privately, much less blurt that out on the web?? The fact that I even put it on Ebay was the result of several "really honest" hams that told me it was worth about $ 600 or so. So I felt that in deference to doing the best for the estate that I would Ebay this item to see what the market felt it was worth. Obviously there were many who felt that it was worth a lot more than I was told by the "honest" hams. Those who bash Ebay sales simply don't have a clue, in my humble opinion, as my direct experience has been very positive and it is the unique and highly valued items that really get a lot of play on Ebay. Obviously this KWM-2A loaded with all its goodies was one of those. And if there are those who think I bought it myself through a schill, I can tell you only that it went to a ham who will put it on the air in Illinois, certainly not me in Dallas, Texas. Now there are comments about a current auction for a SM-2 mike and its high price currently. The same applies to this bid and any others that I have made in the past and will make in the future. I would hope to those who read this will simply take this for what it is worth and restrict their inflammatory comments to things that they have real knowledge of.

Terry Muncey - W5OAS

Oh and by the way, there were thousands of KWM2's upgraded to KWM2A's, all sanctioned by Collins and either provided at the factory or by their authorized dealers. So other than the later KWM-2A's that had the different thickness of the markings, I know of no difference other than revision changes on circuitry. So the comments or suggested comments that there is something "Wrong" with an upgraded KWM-2 is pure bunk, plain and simple.

Did I misunderstand the comments that were made about these Ebay auctions?

I surely hope so.

Terry Muncey

Source record: 95397

Hi everyone. If you're anywhere near Feeding Hills, MA on November 6th, stop by the annual Hampden County Radio Association's auction. Come to buy, come to sell, all are welcome. Usually a good place to pick up old stuff at good prices.

Sellers donate 10% of selling price (up to $10 maximum) to the club. And of course, what does not sell must go back home!

Date: November 6th, 1998
Time: Auction Starts at 7:30 PM
Location:
Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030
Talk-in: 147.105 repeater.

You need not be an HCRA member to either buy or sell, but if you would like to join the fastest growing amateur radio club in the valley, you can do so at the auction for only $10!

Also, Tom Frenaye, K1KI and Bill Voedisch, W1UD from the ARRL will be giving a short presentation just before the auction

Thanks for taking the time to read this. Hope to see you at the auction!

Further information available from:

Jim Mullen - WA1ZUH
144 Tower Hill Road
Brimfield, MA 01010

There's been "chirping like insects" for as long as there has been the ARS... suddenly now it is responsible for all of the service's problems?

Personally, I think part of the problem is that homebrewing is dead. It's hard to build a serious rig when every component in it is micron sized and microprocessor based. Part of the allure for me as a ham in the 60s was building my own gear. That was an incentive for figuring out how things worked.

It's also hard to work on modern rigs, and generally the fix is to find out which black box in the set needs replacing and replace it. Big fun.

Source record: 95403

(forenote:
Let me say at the outset that
I do not support accusing someone
of bad faith without solid evidence,
and I haven't seen any-- just speculations.
How would you like it if I accused you
in public on one of my speculations?
Please think about it; your words are
seen buy thousands here so please
choose them carefully.)

All this shill-damning is just trying to set aside
one's personal responsibility for the price one bids.
YOU are responsible if you over-pay.
Not the seller and not some shill.
Shills are a non-problem.
They are a zero factor.
People either bid what they want to pay or they don't.
People either abide by common sense or let greed trap them.
Either way, the bidder is responsible.

If a "shill" runs a 75S-3 up to $1500
and one other person bids $1510 to get it,
who's fault is that??
The last bidder's fault, of course.
And the lower bidders can't complain--
there was someone else out there
who wanted it more then they.
That is the way the market is supposed to work.
If you wanted it less then the high bidder,
then complaining about the outcome
just makes you look ungracious.

Shillers will sooner or later start
shilling themselves right out of sales
and costing themselves listing/auction
fees in the process.
It's a stupid fool's game.
Those who use shills will get
what they deserve sooner or later.

A good product honestly described and
honestly, properly advertised will bring
a decent price. And you don't have

to lose your good name to get it.

Forget the "shill" strawman.
Bid with your head, not your gonads.

Source record: 95404

Loads of sour grapes, Terry.
Wild accusations made without a shred of real proof.
Some people had zero feedback.
Woop-dee... Happens to me all the time.
I suppose that I must be shilling my items
that sell for $12-$15 because some bidder had zero feedback??
Nonsense.

Lots of people browse Ebay without being registered to bid.
When they see something they really want badly, like
a KWM-2, they go register so they can bid.
They show-up with zero feedback.

All these people saying they are "in the know"
and spreading the word about "Ebay tricks" are
really spreading something else...
it's called B.S.

Unless a "shill" admits it or someone spends the time
to run-down the "shill" email account owner,
the accustion is the nothing more then wild speculation
bordering on slander.

See my reply to the other thread on this.
When a person, upset with an auction's outcome,
accuses another in public of bad faith,
it's more then sour grapes.. It's immoral.

2582. SB-102 Drift Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-06 00:00:00 UTC
From: Bruce E Stock <stockb@accessone.com>
Message-ID: <36432040.6D85@accessone.com>
Source record: 95405

The solid state LMO in my SB-102 transceiver drifts far more than it should. The Heath spec says "less than 100 hz after a 10 min warmup". Mine is doing about 1khz per hour. (or just about the same as the tube LMO in my SB-301!)

I was wondering if anyone has any thoughts on this problem, and is it worth trying to disassemble the LMO to try and find the culprit?

BTW, the Service Bulletins mention an "LMO instability" which is to be fixed by replacing the four mounting nuts with locknuts. My 102 has this mod, but it does not affect the problem.

Regards, Bruce AB7YD

There will be a Special Event Operation of the Three Rockwell Collins Radio Clubs - W0CXX, W4CRC, and W5ROK November 7 & 8, 1998. The purpose of this event is to commemorate the 40th Anniversary of the Collins S-Line Introduction. All three clubs will operate S-Line Stations and will have S-Line Engineers who live in their areas on hand at various times during the event who will operate along with club members. The times for this event are 0000 hrs. UTC Nov. 7, 1998 through 2359 hrs. Nov. 8, 1998. The clubs may not be on the air continuously, so check back if you do not hear one of the stations. The stations will also provide spotting information for the other club stations on the air. The approximate frequencies to find the stations are 7.220MHz, 14.240MHz, 21.300MHz, and 28.350MHz. Each club will QSL direct to those requesting a QSL and send a self addressed and stamped envelope. Those who work all three stations can request a Special Certificate from W0CXX .

I have a Philips PM 2421 Digital Multimeter, circa 1970? Nice instrument, beautifully built (in Switzerland!), works well, uses Nixie tube display. Although it's primarily a "collectible" I like to use it occasionally. BUT - it takes forever to zero after being switched on. Once it settles down, it's fine. If anyone has a schematic and/or parts list (my user manual doesn't have these) I'd like to hear from you.

Thanks,

John Mackesy VK3XAO

Well the first one I tried didn't... sank right to the bottom of the pool...

Second one did the same thing....

Third one... hey wait that wasn't a compactron... diving in after it!

Still dripping... but seriously, I seem to recall an article somewhere sometime
about making a one tube superhet using a compactron. Been awhile though, I'd
bet you can find uses for Compactrons on the net!

Source record: 95229

Hi Guys;
I have two Globe Scouts for sale in Various condition but I think are Priced to sell:
This First one> Front panel has some marks but I consider it very-good and really not all that bad, all original knobs, outer case is marked up but its easy to re-spray hammertone. Has good power output on 80 and then goes to about 5 watts on 10. 6 meters has been removed, new line cord, has mods but is very restorable.
Price is $60 plus shipping !

The Second one>> Front panel is very good to excellent but none of the knobs are original. They all match though! Cabinet has been re-sprayed Battleship grey, Many mods. Output test on 80 to be good, abt 30 watts out! Other bands have little or no output! new line cord. Price is $40 plus shipping!

Both off these transmitters have not been sitting around in a shed or other nasty enviroment, they were in shacks being used by their SK owners and were in-line!
Please look beyind this description at the very good components and restoration possible on a cold winter night. Only one transformer has a little rust but all rest are complete with all tubes and will not explode when plugged in!
Please give them a home!
Thanks es 73....Rich WA2RQY (1961)

> Don, W6JL

Don is exactly right. There has never been a better time for the
homebrewer and experimenter. A large part of that is due to
SMT and VLSI. SMT allows us to fabricate complex circuit
boards without having to resort to drilling and plating through
holes. It is now faster, easier, and cheaper to lay out, etch,

and load a board than it ever was with leaded parts. We don't need special CNC drills or nasty plating baths.

The techniques for working with SMT and VLSI aren't complex, and don't require very expensive and exotic equipment. The equipment required is actually cheaper and simpler than for working with thru-hole parts, but some new skills do have to be learned. 80 year old watchmakers 350 years ago, and jewelers going back to pre-history, mastered these skills, however, so age and lack of exotic tools aren't barriers preventing the amateur from working at this level.

VLSI has encapsulated entire functional subsystems into a single component. That's made complex circuit functions easy to design and build. PALs, GALs, and programmable DSP parts have made realizing virtually any transfer function simple.

More and more our radios use digital signal processing techniques to realize their transfer functions. This trend will continue to accelerate. In broadcast, even that traditional analog stronghold, the PA, has given way to high efficiency digital switch mode design. It is only a matter of time before amateur equipment also exploits the advantages of DSP for virtually the entire radio from end to end.

Many of these functions can be designed and tested on the PC before solder is ever laid to copper. Anyone with a PC and a few design tools is as well equipped as any corporate drone for doing this work. Amateurs willing to acquire the knowledge and skills required are on an equal footing with the professionals. Cost, and the need for specialized equipment to develop new systems, has virtually disappeared as a separator between the amateur and the professional. Most circuits translate directly from screen to copper and work first time. A lot of tinkering and fussing with prototypes isn't required.

This latter seems to put off some amateurs. They've always developed circuits by trial and error, and that isn't as easy to do today as in the past. Some knowledge and skill at design is now required from the start of a project. The builder has to think and plan a bit more than in the past. But on the flip side, his project is more apt to work correctly the first time too.

The knowledge and skill required is not difficult to obtain. Claims that an EE degree is required are false. If you need information force fed to you in a structured setting, then it may indeed be true that you might have to enroll in an EE program. But amateurs shouldn't need to be force fed. Our curiosity should be sufficient spur. The knowledge required is available in books and on the web, all it takes is the interest and initiative to go seek it out. We don't have to be well rounded products of university, we can focus as narrowly on our own objectives as we like.

Since much of the functionality of a radio is now software, and since software is the ultimate cottage industry, amateurs have a greater opportunity than ever to play at the same level as the corporate

giants. And since amateurs have no deadlines or quarterly profits to concern them, they are free to pursue ideas that might seem too exotic or long term for the corporate environment. Amateurs have the greatest freedom of all, the freedom to fail. If our idea doesn't work, no bottom line is impacted. This means that we can poke into any dark corner (which is where all the fundamental breakthroughs hide) without worrying about keeping our jobs. We don't have to stick to only sure things where schedules and deadlines can be maintained. This is a huge advantage.

The days when we looked to the great corporate laboratories for innovation are gone, victims of quarterly bottom line pressure and corporate downsizing. Real innovation today comes from small aggressive groups equipped little differently from the amateur. We don't have to take a backseat to them, unless we lack the interest and enthusiasm to work at their level.

We don't have to be consumers of the products of Japanese industry unless we want to be. We can build equipment which is comparable to, or exceeds, the capabilities of the factory rigs right on our home workbenches. (Our radios might not be as pretty, lacking stamped or injection molded cases, but they can work just as well, or better, than the consumer appliances many of us buy.) It is really up to us, there are no real barriers preventing us from doing it except our own self-imposed limitations.

Hello out there,

I am posting this for a buddy of mine.....here it goes.....

Collins 30 L-1 Linear amplifier with round label, needs tubes. $425.00
plus shipping....
Amplifier has been checked out with known good tubes, it works great!
How does it look.....Has 2 little dings in the trim ring (you can get them
at Nebraska surplus for under $25.00). No scratches etc.....

Well if you are interested email me at bierbier@bellsouth.net

Thanks,

Gary Caire

Also have Atlas Mobile rig, will post more in that later.....73's... :-)

2608. Halli. TO keyer

Date: 1998-11-07 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19981107000136.13046.00000419@ng109.aol.com>
Source record: 95234

I have a TO keyer which I have never used for want of knowing how to connect!

Can someone with the manual give me the connection by pin number to the octal plug? And am I correct in assuming that the keyed output comes from the jack in the front?

Tnx,
K&#65533;MB

This pretty close to my first station. I had an AR-3 but I never used it once I was licensed. While waiting for my ticket I obtained an HR-10 that served me well during my novice career, One of the transmitters was a 720. I also had several homebrew rigs built with parts salvaged from discarded television sets. All worked to varying degrees. A large knife switch did the t/r to various wire antennae thru a homebrew tuner.

DX was pretty good on 15 mtrs, I worked over thirty countries missing WAC by way of Asia. Ten mtrs didn't provide much DX but I could work anything I could hear. My most memorable novice QSO was with a Michigan ham working SSB portable ZF on the high end of the novice segment. He was calling novices and listening from 21.1 up.

I'll never forget my sole eight meter frequency, 3747 kcs. During my novice tenure I only met one other novice who had a crystal of the same frequency. Working split was a way of life, I was among the last novices restricted to crystal control.

>day commercial transceiver? Particularly on their own? Very few.
>Could they do it for the same cost (assuming that their labour was free)?
>Probably not.

I'd say most hams have the resources, or can easily acquire them,
to build a radio which can exceed the performance of a current day
transceiver. Few have the gumption to try. Cost can be a bit less too,
but again you have to be willing to try. The one area where hams
probably can't duplicate commercial equipment is appearance.
Without access to stamping machines or injection molders, our
efforts look a bit "amateurish".

>>What keeps people from simply duplicating designs from 40 years ago?
>>All the parts are still available.

Parts aren't always available. Lots of the 40 year old designs
used parts that are no longer used in electronic production. You'd
have to do some serious scrounging to locate some of them. Of
course hams have always been scroungers, but building with this
generation's parts makes more sense.

>But the designs from years ago are not competitive with current

Just bought a real nice TV-7D/U from GL Sales & Service. This one was as close to mint as I have ever seen for $100. However, the most I ever saw a TV-7D/U go for was $430 on eBay. You got to have good photos in order to get bids like that. Average news group price I have seen is about $150. Average eBay price has been going for around $200.

Just think, years ago these things were sold at hamfest for $25!!

I would offer you something for it but I have 4 TV-7s right now (two of them TV-7D/U). I love them, but my wife would question the need for a fifth :)

Hope that helps.

Gang!
I pick up any equipment that has tubes, the last being some audio amplifiers on the curb, a bunch of Tektronic scopes, at a garage sale and some Western Electric equipment that I still have to go through. The WE stuff has some gold glass capacitors.. gold?
Anyway, I use Quattro pro for my tube inventory, and I can then sort on any column. I keep myh tubes in the old 5inch hig file drawers, like the ones computer cards went in. The drawers are just high enough to put the tube boxes in with the numbers upright.

I've got an SX-117 which I tweaked up, and I don't recall the manual calling for those crystals. (but maybe I missed it) Where were they used? Were they plugged into the optional oscillator sockets and used as markers? If so, seems like a decent signal generator and counter would do ya.

>
>Too late. The majority of hams now are non-technical types.

Probably so ... at least as in "They're not technical professionals."
That doesn't mean that they can't/shouldn't learn about the technology
of electronics and radio communications. On the contrary ... one
of the main purposes of the existence of amateur radio is for self-training
and education in the technology.

> Aside from small weekend projects most don't build equipment.

That's sad, but true ... we should encourage more building ... but before
the procoders jump in with "That's why we must maintain Morse testing,
because it's so easy to build a CW rig ..." let me say "HORSEFEATHERS!"

It's no more difficult to build something FAR more effective and efficient
than an OOK Morse rig.

As has been outlined here MANY times, even simple BFSK has an
advantage of (at least) about 9 dB over OOK Morse ... the main gripe
of the procode faction is that it (usually) involves the use of a machine
(microcontroller) to perform the encoding/decoding function ... why they
must insist that manual methods must always be considered "superior"
is beyond many of us ... it flies in the face of the physical and technical
realities of the world we live in, but many insist on adherence to that dogma
with pseudo-religious fervor.

> Most can't work on the microscopic computer boards in modern radios,

Only because they have avoided accumulating the necessary basic
knowledge and simple tools necessary to do so. I routinely work with
moderately fine pitch ICs (SSOICs, TQFPs, etc.) and passives of 0603
size with simple tools and no problems.

>The tide has been turning for years and there is little hope of reversing it.

Why? Because you say so? When we place more value and emphasis on
technical abilities and knowledge than, as Cecil said, "chirping like insects,"

we'll see a turnaround.

> Ham radio is fast becoming a communicators hobby.

That is a course destined to self-imposed extinction ... there is no way
that we will be able to justify our allocations far into the future on the basis
of a communicator's hobby. The current demands for spectrum are too
great and they will only increase in coming years (yes, even into the HF
bands, I predict) ...

2624. Help needed with National NC-300

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-07 00:00:00 UTC
From: ezela57383@aol.com
Message-ID: <19981107093511.18228.00000528@ng42.aol.com>
Source record: 95250

I could use some advice for my National NC-300. I am quite familiar with the NC-300 operating procedure in the sideband mode....in the AM mode the audio level is quite sufficient, however on sideband, the audio level drops significantly (perhaps to 250-500mw out at best), even with the RF gain/AF gain at maximum. Before troubleshooting this, I want to make sure this poor audio gain level is not typical of the NC-300 design on sideband.

Can anyone be of assistance?

Thanks

>There's been "chirping like insects" for as long as there has been the
>ARS... suddenly now it is responsible for all of the service's problems?

The problems are the result of the refusal of many to "keep up with
the times" and accept the need to adapt to changing technology.

>Personally, I think part of the problem is that homebrewing is dead.

I agree that there is not nearly enough building going on ...

>It's hard to build a serious rig when every component in it is micron
>sized and microprocessor based.

That's where you're mistaken ... all that's happened is that functions
that used to take entire racks of tubes have been integrated into
ICs ... it's actually MUCH easier to design/build a "serious rig" today
than it's ever been in the past ... IF you understand how the modern
technology works ... there's that "nasty" requirement for having some
technical knowledge/skills and keeping them up-to-date.

Of course you can't design/build a "serious rig" today if all you know
is tubes ... perhaps this does not apply to you, personally, but it
DOES apply to a LOT of old-timers.

> Part of the allure for me as a ham in
>the 60s was building my own gear. That was an incentive for figuring
>out how things worked.

So why did that incentive disappear? It sounds like you just gave up
when confronted with changes in technology from what you were
already familiar with ... if that's not the case, you should/would/could
have adapted ... by learning ...

>It's also hard to work on modern rigs, and generally the fix is to find
>out which black box in the set needs replacing and replace it. Big fun.

It is NOT "hard" to work on modern rigs ... (I'm assuming you're referring
to surface-mount technology and the smaller part sizes and higher levels
of integration ...) it's just DIFFERENT. You need a slightly different set
of knowledge/skills and a few simple tools. As is said in my last post,
I routinely work with rather fine pitch ICs (SSOICs, TQFPs, etc.) and
passives (R, C, L) in 0603 chip form. It's different than using the old
"Black Beauty" or Weller soldering gun to solder wires and leaded

parts to octal tube sockets (I've done that, too), but it's not "harder."

The more I read of your post, the more it appears that the only thing
that stopped you from building was an unwillingness to learn and adapt
to the changes in technology that have happened around (and,
unfortunately, bypassed) ham radio in the past several decades ...
I don't mean to be personally offensive, but I think that that combination
of attitude and (in)action is THE worst cancer eating away at ham radio
and its ability to survive into the future.

>Digital is easy. The theory behind making those one's and zero's do neat
>things like DSP isn't so easy. If hams whine about having to learn simple
>things like Morse Code, just think about the carnage that would result in
>trying to educate them in something as evil as math...

However, there IS a significant distinction ... to the many of us are actually
interested in things like DSP, modern communications system design,
and the theory behind them. Those are skills which have actual, practical
value in today's world and into the future ... the ability to manually encode/
decode OOK Morse transmissions has NO such value to us ...

When I was a child, I thought math was "evil," "boring," etc. When I got older
I realized that it's a fundamental tool for understanding how the world and our
technologies work ... it seems to me that those who merely wish to play games
using radio as a playing field tend to dismiss the value of fundamental skills
and knowledge of the underlying technology ... for many of us it's the raison
d'etre for the ARS (and Part 97.1 seems to substantially agree) ... the funny
thing is that I don't see a damned thing in Part 97 (anywhere) about games,
contests, and the like being "part of the purpose" ...

Better reread S91.1 again; that section contains the reasons for
our existance and our goals. This time pay special attention to
its last paragraph.

Also, pay special attention to all the newsgroups this thread
appears. I've set the followup-line to just r.r.a.misc.

Enjoy the weekend!

I just acquired several very old, large air-variable capacitors - most operate freely but they're pretty grungy on the plates and frames.

What can I use to clean these? Do I need to lubricate them in any way after cleaning?

Thanks & 73,

-Marty KIï¿½LO

Well, I'll concede some merit to your assertions :-). I didn't give up so much as get sidetracked-- working on a math degree at M.I.T. left me with little time for ham radio, unfortunately-- and before I knew it 5 years had passed and the ticket was gone. Took me quite a few years to get back into it, and like most people I am stubborn and set in my ways :-)

73s,

Marv

Hi all,

I've been bitten by the bug to put together a 211 transmitter and participate in the AWA 1929 event. However, I can't justify the prices (!!!) these babies go for from the tube vendors. Anybody have a working one at non-audiophile prices that they'd like to see get on the air again? I'd also need a socket. Thanks.

73,
Mike, KK6GM

There is a swapmeet tomorrow but it is organized by the CHRS
California Historic Radio Society. Good news: There is no computer
junk. It starts at 8 AM. It is every 3 month on the first Saturday.
Don't mix it up with the Foothill swapmeet on the second Saturday
March thru October which starts at about 5AM

Wow, I'm glad you're not the ham God. Just plain ragchewing has always been a big part of the hobby. Nobody should be forced to become technical just to enjoy this part of the hobby. Perhaps it would be realistic to also eliminate the engineering part of the test for those that only wish to use plug and play radios. Making people memorize technical material that they don't understand to get HF privileges is just as much a weeder as the CW test.

W0CRC 14.256
W0ROK 14.220

This is the Collins S-Line special event station, other frequencies to watch are: 3.890 7.220MHz, 14.240MHz, 21.300MHz, and 28.350 should be easy to find, listen for the pile up.

2655. Re: Alignment:SX-117 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-07 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19981107160515.08578.00000589@ng110.aol.com>
Source record: 95331

To align the preselector you need both a freq gen. and these xtals. See page 17 of the manual:
"To align the PRESELECTOR, 9.5-MC and 18.0-MC type CR-18/U crystals will be required. Insert the 9.5-MC crystal in Auxiliary Oscillator socket No. 1 and the 18-MC crystal in Auxiliary Oscillator socket No. 2.

Step 1
a. Set generator frequency to 3.0 MC
b. Set the receiver TUNING dial to &#65533;.
c. Set the BAND SELECTOR to 3.5.
d. Set PRESELECTOR to &#65533; (Maximun capacity).
e. Set XTAL SELECTOR to 1.
f. Connect generator to antenna input.
Adjust L5 (antenna coil) and L6 (mixer coil) for maximum receiver output.

Step 2
a. Set the generator frequency to 11.5 MC.
b. Leave the receiver TUNING dial at &#65533;.
c. Set BAND SELECTOR to 7.0.
d. Set the PRESELECTOR to 10 (mimimum capacity).
e. Set XTAL SELECTOR to 2.

Adjust trimmers C3B and C3D for maximum receiver output."

etc.

I suspect that you, like me , had to skip over this part!

Cleaning up the shop, can't believe I've got 11 GDO's around!
Anyway--time to get rid of a few:

Millen model 90651A this is the later transistor version--Brand new in the gray plastic carry case, w/ A thru F coils, manual and data sheet. Not a mark or a scratch on this unit. $135

Military AN/PRM-10 very nice Heavy Duty GDO in a steel case w/ snap off cover [diagram in lid] covers 5-250MC modulator built in, exc condition works fine. Have 2 of these for sale $85/ea

Heath HM-10A Tunnel Dipper, like new in the Alu carry case,w/manual $35

All plus UPS. Thanks, Craig

Marv ... I'm glad you didn't take offense ... none was intended, despite
the fact that I may have been a bit harsh with you considering it was,
I believe, our first exchange.

You sort of hit one of my "hot buttons" though ... the misconception
that modern technology makes it "harder than it used to be to build
ham gear" ... as I hope I stated clearly, nothing could be further from
the truth. And it doesn't have to be an OOK Morse rig, either ...
excellent results can be had in FM, SSB, and digital modes with rigs
built from ICs which actually shield you from much of the complexity
by integrating it onto the chip. Add a few bypass caps, some resistors,
an inductor here and there, a crystal, etc. and you've got a complete,
functioning system.

Why not take a crack at it, if you're still intrigued with building?

>actually listen to our bands. We're lucky we have what we still have.
>

I agree that we're luck to still have what we have ... we need to keep
up public service (and keep our capabilities up to what the emergency
services folks want) as well as start showing some technical progress
or I'm afraid we're going to get hosed in a big way in the early part of
the coming century.

The EMS folks don't need/want CW ops any more ... they haven't
in many years ... they want VHF/UHF tactical voice and data and HF
voice and data ... not Morse code.

We need to do a LOT of modernizing if we have aspirations of
survival ... problem is, many of the folks who want to keep things
"like it was in 'the good old days'" will be dead in a few years and
really don't give a rat's ass what happens after that.

Truth is, anyone who wants to homebrew the old way can still do it.
Anyone who wants to homebrew the new way can do it. More opportunities
for homebrewing exist now than have ever existed. It's hams who have
changed, not the homebrewing opportunities. I personally would like
to see a ban on commercial amateur transmitters, akin to the ban
on 11m linear amps. 'Course the ARRL would never go for such.

Note that the very hams who want to force "outdated and irrelevant skills"
on all HF amateurs are the very ones who object to the learning of up-to-date
and relevant skills. Why am I not surprised?

2673. MORE ON KWM-2A LOADED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-07 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-981107183321Z-86@webmaster.eletrosys.com>
Source record: 95349

The more I read about this thread, the more I tend to be amazed by the absolute gall of some of the people's comments about this Ebay transaction!

I am the person that sold the KWM-2A for $ 2,025 + more for a crystal pack + shipping and I was paid in full the day after the sale. The estate is surely the beneficiary of this sale and thank God for something like Ebay because the sharks would have certainly gobbled this one up for the $ 600 that some would have liked for me to believe that it was worth.

Many of the people who keep commenting about this transceiver must be really frustrated out there because they must have wanted to grow up to be price cops and just didn't make the grade! There are some people who believe that only they know what radio stuff is worth because of all the gnawing and gnashing of their teeth because of this Ebay sale. By now with my previous several re-posts about this, they should know that there were no "schills" out there and that it would not resurface for sale again. This was sold to a ham in the northcentral part of the US who would have paid even more for it the way that it was outfitted, so for all the frustrated wannabe price cops - in your mind it might not be worth that much in your own minds or even dreams but you can't hide from the fact of what it sold for. So you were wrong - why can't you'all admit it? Let's face it - hams (generally) are known to be just plain cheap! (and I consider myself to be in this category as well) - but the difference is that I never wanted to grow up to be a price cop and I believe that an item is simply worth what someone will pay for it. As simple as that! I surely hope that sometime soon the price cops will bury this thread and get on with living in the present tense, not to dwell on things past.

Since you are all amazed at that price - try the Collins SM-2 on Ebay on for size - that should really get you to talking.

Wow. What ever happened to different strokes....live and let live..ect. This "if you ain't technical you should be banned" attitude is very similiar to "if you don't know the code you should be banned". One of the interesting parts of this hobby is chatting with people in other professions: teachers, cops, truck drivers ect. Most of them will learn how to make antennas, install radios, and even build kits, but probably unlikely to become an engineer that is up to your "technical ham" standards. If they *really had to know* what is on the engineering part of the ham test of course they wouldn't have passed anyway. But of course the test is a laugh as far as determining a persons technical ability. To reach your goal maybe you should get the ARRL to support a *real* engineering ham test.

I thnk that there are other very good reasons for avoiding the circuits and components of the past:

Those 40-year-old designs for transmitters were built largely around the use of Class C frequency multipliers, drivers and finals. Without extensive filtering and shielding, such architecture can result in overwhelming RFI, as witness the 50's when TV first came on the scene and most of us were still using the "old" circuits and equipment. True, the TV sets then were grossly inferior to present-day designs re RFI rejection, but the fact remains that our transmitters today are marked by an almost total absence of Class C stages and other circuitry that generates high levels of harmonics.

I always cringe a little, having lived through those early days, when folks advise new hams to start off with a "good used DX-100" or equivalent. We use SSB for phone and multiple IF transmitters these days for good reason . . .

Thats kinda of a curious stance. You seem to run mostly commercial gear.
IE:Icoms etc.
How often do you run homebrew gear? I'm talking a complete tranceiver,
or homebrew rcvr/xmtr. I built my first xmtr as a novice, but no rigs
since. I do homebrew other stuff though. All commercial gear here
now,but I can fix them if they break. One problem with the new age
homebrewing is info. Alot of the new modules ,componants,chips, etc are
not really advertised unless you subscribe to all the parts co. books.
Or are mentioned in a article. To build a rig I'm sure is not too hard,
to build a rig with all the fancy bells and whistles, I'm not so sure.
Just to dupe my small icom 730 would be quite a homebrew project.And
it's pretty old. I'm all for homebrewing, but everything I see
homebrewed is all qrp stuff. Small size, small features,etc. I don't
hear of too many modern homebrew BIG feature rigs. I don't see any in
the mags that would satisfy me as far as plans go. All I see is mickey
mouse looking qrp rigs. I'll stick with my Icom and kenwood, and drakes
for now I think. MK

2683. Re: SX-42 with weak FM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-08 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <724j6qetf1@supernews.com>
Source record: 95109
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

For what it's worth, I finally found the source of weakness. It was resistor R40 (on the Rider's schematic), which I guess is the plate decoupler for the 2nd IF stage. It is supposed to be a 1.2K resistor, but I had installed an 8.2K, which held down the gain in that stage.

With the right resistor in place, voila -- much louder FM. I had previously cured the low-voltage problem by resoldering the ground connection at one of the limiter tubes.

Either I or some previous guy must have replaced R40 by reading its value off the old resistor and mistaking gray for brown.

"Take nothing for granted" is a good motto. I could have saved a lot of time by doublechecking that resistor's value against the schematic instead of assuming that the existing unit was the right value, or that what looked like brown-red-red really *was* brown-red-red.

Now if I can just get the FM aligned right!

Cheers.

Source record: 95115

Looking for a copy of a 1968 to 1971 era magazine I believe was called Electronics Illustrated (or similar).

The specific issue I am looking for had an article and schematics for the design and construction of a "morse code transmitter" that had a power ouptut of about 100mw, generated MCW and operated on CB (27MHz) frequencies.

Any help finding a copy of this article or magazine would be appreciated.

I've got a KAAR TR222A SEALION RADIO TELEPHONE. KAAR was a division of Canadian Marconi. The unit is a ship to shore radio telephone operating just above 2MHZ. It has three 807's for the RF final and two 807's for the modulator. I'd like to get a schematic for it to see if I can get it working and modified to ham bands. It's fairly tightly packaged. Thanks for any help. Ted, busky@portone.com.

Jerry: Radio was manufactured by Raytheon. The design engineer was none other than Mr. Ray Morrow, from Salem, Oregon who originally manufactured some of the very finest mobile amateur equipment event made. Called, Morrow Radio, strangely enough! I bet if you have been a ham since the fifties you will be familiar with that name and drooled over that equipment. He finally wound up back in Salem and he and his son produced a series of Loran aircraft receivers (had one in my plane) but don't know if they are actually still in business or not as have not flown for about seven years now. The company was located in Salem and was probably the leading exponent of this type of equipment for several years. Hope that helps. Van, K7VS (formally W1ZLK and WA7FAB) Medford, Oregon

> Jerry: Radio was manufactured by Raytheon.

Hi Van,

Several fine articles were published in "Electric Radio" about the SBE SB-33 and SB-34 rigs, written by Walt Hutchens, KJ4KV (January, 1995). According to Walt, first mention of the SB-33 in QST was a two page ad in the Dec. 1962 issue, announcing the formation of a new company called Sideband Engineers, with Faust Gonset as president, located in Rancho Santa Fe, California. The SB-33 was to be available in February, 1963 at a price of $389.50. The December, 1963 ad lists the company as "An Operation of the Webster Company" and gives the address as 317 Roebling Rd., South San Francisco (the same as on Webster's ads for their mobile antennas). In January, 1964, the SB1-LA linear amp was announced, at $279.50. QST reviewed the SB-33 in April, 1964. The SB1-LA was reviewed by QST in September, 1964. The SB-34 was announced in December, 1964. The -34 was followed around 1970 by the SB-35 and then finally by the SB-36. Not long after the -36, SBE left the ham market in favor of CB equipment. During the late 1960's, SBE was owned by Raytheon Company. Around 1972, Linear Systems, Inc. became the fourth owner of SBE and turned the company's attention to the marine and CB markets. The SB-36's were relatively rare, with the SB-35's being even rarer. Both of these rigs were made in Japan.

The SBE rigs were definitely "trendsetters, ahead of their time" in both design and construction. Sadly, they "fell victim" to the Japanese ham rigs which were introduced to the U.S. market in the late 1960's, with cheaper parts and much lower assembly costs. Larger, well established companies such as Collins, National, and Hallicrafters got by with the help of military contracts, but none of them did well with the increased competition in the U.S. ham market from overseas manufacturers.

2695. FS: LOADED Drake TR-7 Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-08 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <19981108144606.14643.00000998@ng34.aol.com>
Source record: 95121

I am selling a LOADED Drake TR-7 station. It consists of the following equipment:
The Drake TR-7, with the AUX-7 board model 1536, PS-7 power supply, FA-7 fan on the TR-7, SL-500 CW filter, SL-1800 narrow SSB filter, NB-7 noise blanker, RV-7 remote VFO, MN-7 antenna matching unit, MS-7 speaker, 7077 microphone, all original manuals, plus the complete Drake service manual, dust covers.
Everythng is in excellent condition, and the TR-7 underwent a complete service and alignment at Drake on 11-6-96. Everything looks great, except the outer cabinet of the TR-7 and the MS-7 have a little sticky feel from where the plastic packing stuck to the cabinets.
I would prefer pick up at Greenville, SC, but will pack and ship if necessary.
Price for everything is $1200, or close offer. I will not sell separate pieces at this time, so please don't inquire.

Jon, K1VVC

Ebay Furor - Watch out for the Sharks
Date:
Mon, 26 Oct 1998 12:21:26 -0600
From:
Terry Muncey <tsm@ELECTROSYS.COM>

It seems that since I started this latest furor up about Collins pricing and then decided to offer it via Ebay, it also should be me that completes the circle. There have been multiple posts about how I have abused the good will of the respondents who gave pricing ranges on the pristine group of Collins Equipment that I am tasked with selling for an estate.

My original post and subsequent post resulted in 23 responses. 12 of the responses gave a range on prices based on their values. Many of the respondents were willing to purchase at what I gathered were prices lower than market value for this equipment. Further compounded by the fact that several people wanted the same items. Many price ranges were simply outrageously low. Obviously there are folks who are trying to squeeze the blood out of a turnip perhaps pick up a load of great stuff at low prices from a guy who freely admits that he is rusty on Collins prices! Those who did not low-ball the prices know who you are but as a case in point, I had a weighted average of about $ 600 on the loaded KWM-2A that was posted. It doesn't take a rocket scientist to figure out that this particular unit may be worth twice what was offered as a fair price! (GET A LOAD OF THIS COMMENT) I was highly incensed about the comment from one person that the condition of the equipment is probably not as advertised.

I am the proud possessor of a 75S-3C but this receiver has a 75S-1 face plate designator on it, yet the filter position markings are that of a 75S-3C with CW1 and CW2 positions. Does anyone have a 75S-3C face plate out there in Collins land?

* We are waiting for this one to show up on the auction block, another modified piece of gear.

Terry - W5OAS

Looking for the correct plug-in filters for S-Line as follows:

2.1
1.8
.8

.5
.2 understand this is a crystal, not mechanical filter
Do any exist for AM?

This would be for a 75S3-C. What have you'all out there? Price??
Trade?? Terry - W5OAS

HELP! MY FIRST POST TO THIS AUGUST GROUP OF COLLECTORS

I am somewhat rusty with values of Collins stuff - sold my collection
of goodies about 5 years ago - but have just come into a cache of new
goodies from a lifetime Collins collector/lover and can't use them all,
but need just a little help about today's prices, so if you haven't
fallen asleep yet, perhaps you can give me some input as to
price ranges for the following. All of this equipment is in PERFECT
operating condition, and was restored and aligned by a real expert on
Collins having done it for 20+ years for the military. Has been
setting on a shelf with covers to keep the dust off the like new
chassis of these units:

Item Description Condition

1 - 32S3B Round Exc - like new
1 - 75S3B Round Exc - like new
516F2 Round Exc - like new
2 - Xtal pack Exc - like new
SM-3 microphone Exc - like new
30L-1 Round Exc - like new
3 - Collins Suitcase Exc - like new
KWM-2A Round - vy late Exc - like new
516F2 Wing Exc - like new
SM-2 microphone Exc - like new
32S1 w/32S3 Wing faceplate Exc - like new
75S??C w/75S1 Wing faceplate Exc - like new
KWM-2A Wing w/waters rejection,
Speech processor & noise blanker Exc - like new
PM-2 power supply Exc - like new
Spectronics digital display for S-line Exc - like new
Multiple plug-in mechanical filters

Also several mobile power supplies for S-Line, Collins auto-tuner
And perhaps one or two spares transmitters & receivers of S-Line
Vintage.

Ideas?? Will appreciate all input from you up-to-date Collins
collectors.

Terry - W5OAS

This was his orignal post...gee I don't know what it's worth guys, I am
out of touch with today's prices, can you help me out here, what do YOU
think it's worth?

Now he decides that everyone is out to rip him off because he didn't like the responses he received so it's off to E-Bay. Everyone is a scam artist now, out to low ball him, but remember he sked them, they did not volunteer any prices or offer any comentary on this equipment until they were asked.

So what's your point Muncey?, you claim you made a killing on e-bay and proved how sharp you are at wheeling and dealing. Now you come back here and re-open this thread trying to rub everyone's face into the fact that you could pawn off a converted KWM 2 for two thousand dollars. Say, you did wonderfull and I bet that made yoursef some more friends here while doing so. If I were you I would've taken the money and kept quiet on the issue rather than antagonize people, and you have been quite successfull in doing that I might add. I also hope the guys have taken note that now your bragging how you made over $500 on an SM-2 microphone on e-bay. Also, good luck on you recent items (For Sale) or rather, up for auction on e-bay. Perhaps you can re-visit us after they are sold and brag to us again about the selling price.

You didn't seem too "rusty" in telling us how much you got for the KWM-2A on eBay, Terry. And you "knew" it was worth that price, despite what all the Collins fans, collectors, and experts suggested to you it was worth. Who are you trying to kid?

> This was his orignal post...gee I don't know what it's worth guys, I am

Disgraceful. Please take yourself and your items all over to eBay, Terry; you obviously have friends there. Here, amongst boatanchor afficionados, the opposite appears to be obvious.

> Also, good luck on you recent items (For Sale) or rather, up for

Hopefully not. But (other than those of us who have more money than brains)
at least we're learning who *not* to buy gear from, as well as why not.

>but again you have to be willing to try.

I think you're underestimating the startup costs.

I've been playing with electronics for decades, and have a reasonable connection of electronics tools - crimpers, temperature-controlled soldering iron, power supplies, scope, signal generator, frequency counter, some multimeters, etc. I've done some building with discrete surface-mount parts already, and like it - no pesky holes to drill.

But the only way I have at the moment to produce PC boards is hand-drawn etch resist, or the method of covering the board with adhesive tape and cutting and stripping the tape from areas to be etched. Neither of these is practical for multi-lead surface-mount ICs. To use these, it appears that I will need a PCB layout program of some sort, as well as a PC and laser printer - I have none of these (I use a Mac and an inkjet printer).

Using PICs, EPROMS, PALS, or GALS requires a programmer plus programming software. DSP development kits also cost significant money. Emulators for debugging this stuff cost *lots* more.

Actually writing software doesn't bother me - that's my background. But the cost of all of the associated hardware is daunting. I'd guess that it would cost $3K-4K (CDN) to obtain most of the stuff named above (without the in-circuit emulators). That's nothing at all for a business, but it's a significant amount of money for a student, and many times the cost of a commercial transceiver.

Things are improving. PCs are now usable computers, and the next machine I buy will be a PC. There is now one place in town where I can buy a small selection of surface-mount parts in small quantities. (A few years ago there were none). Digi-Key has a Canadian arm now.

I think that engineers working in the electronics industry don't have any idea how much more difficult it is to obtain resources that they take for granted when you are an outsider. For a while, I worked at a place that did a lot of electronic design work, so I had access to data books and good test equipment and an IR reflow oven and solder paste applicator and many other neat and useful things. But I lost access to all that when I left, and I'm dependent on my own resources now - which

are limited.

Message-ID: <36462C9F.7223@pop.removethistomailme.net>
Source record: 95134

I'm looking to relieve myself of some "projects" that I haven't seemed to find the time to work on for a couple of years now. They are taking up space which is needed for other things. None of these sets (with the exception of the S-36A) is in perfect working order, but none of them are basket cases, either, and are excellent parts mules if nothing else.

I am not the LEAST bit interested in shipping this stuff. The first person who emails me (after successfully passing the Spam-Proof(TM) I.Q. test cleverly encoded in my address) committing to a time to come and pick them up from me THIS WEEK, gets it all, for free.

Items to be given away include:

- Hallicrafters SX-28A, worked the last time I plugged it in but needs alignment and possibly a few minor repairs. Missing tuning dial trim ring.

- Hallicrafters S-36A, works great but missing front-panel screws. I have added a solid-state quadrature discriminator for good-fidelity FM reception. The mod could be easily undone. This is a really nice rig that would probably fetch $100 or $200 or more if I wanted to put it up for auction on BarnumBay and ship it (which, again, I don't.)

- Hallicrafters S-22R, I don't remember if it plays or not but it does light up and hum. Good cosmetics, probably not much wrong with it electrically.

- RCA 8T241 (I think) 10" TV set, c. early 1950s. Has basic raster and sound, but needs alignment and who-knows-what-else. Chassis is in good shape but wooden cabinet is in, well, hideous condition. Would make a nice restoration project if someone with good furniture skills were to get hold of it.

- Mostly-complete set of Riders manuals, fair to good condition. I don't remember exactly which ones I have (they're in storage), but most radio volumes are present, along with 4 or 5 TV volumes.

The only catch is that whoever picks this stuff up, has to take it ALL. :-) I'm located in NW Austin, Texas, and am available most afternoons and evenings this week except for Friday.

Source record: 95137
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Hello! I want to buy a Stewart Warner Model 9003-A radio in any condition as long as all push buttons are there. This set was produced for three other companys under the names and models as follows:

Phillips Oil Co. Woolaroc 3-3A
Pure Oil Co. Puritan 508 code 7A35SW
Firestone Airchief 4-A-23 code 5-5-9003-A

This radio belonged to my grand mother and it is the only thing I have from her. She died 3-4 years before I was born in '64! So it is important to me to find a push button as this is the only thing I am missing on it. I just need the one push button, but finding one is next to impossible. This is why I am willing to buy an entire set hopefully in poor or parts condition. The reason I want a complete set of push buttons is that the colors on the Woolaroc, Puritan or Airchief may be different than the ones I have. I want them all to match!
Thanks
Randy KB8ASO in Milan In.

It all boils down to the fact that some people have more money to play
with than others. The 2 grand plus could have been a drop in the bucket
for the buyer. Kind of like the guy that takes 50 grand to Vegas for a
long weekend. You guys complaining are probably the same guys that beef
when passed by the guy in the new 100 thousand plus sports car while
driving to "Uncle Jim's" with the family in your 5 year old Dodge

Caravan.

Just my 2 cents

Indeed, that is the crux of the matter. Many hams love to berate those who balk at learning Morse (a perhaps fun, but largely outdated and irrelevant skill), yet when faced with learning something ACTUALLY useful, say that it is far too much to expect.

I think it is too much to require people to learn outdated and irrelevant skills, no matter how easy.

As for the difficulty of learning DSP, is it really harder to learn how an FFT works than a transistor? I know that I understand FFTs alot better. Are crystal filters easier to design and use than digital filters? Microcontrollers are cheap and available, and while perhaps your homebrew rig might not look as

nice as the commercial rigs, more and more of the "convenience" functions of modern rigs can be easily added by amateurs. Both Microchip and Atmel sell chips that are easily programmed by any amateur. They are low cost and can

add a great deal of functionality to a radio.

I tend to be amazed by the "defense" of this transaction which you've
apparently felt necessary here, altho I certainly respect your right
to do so if you so choose.

> I am the person that sold the KWM-2A for $ 2,025 + more for a crystal

Congratulations, Terry, on selling your KWM-2A for $2,025 +.
If both the seller and the buyer are pleased with the transaction,
that's all that really matters. "Price cops" have nothing to do
with the transaction; it was between yourself and the buyer.

I was neither the seller nor the buyer (nor a bidder) in this transaction,
but do believe I have a right to express a personal opinion, just as you
have publicly done about this transaction. I agree with you that "an item
is worth what someone will pay for it". I also personally believe that P.T.
Barnum once again has been proven correct, and that this KWM-2A transaction
is "one for the record books".

I started Ham radio in 1960. My call sign was KN0KDD. My first
receiver was a Hallicrafters s-107. I got my license the same time
that my dad did (KN0KCX). He bought a Viking Valiant I and a
Hammarlud HQ100AC. We used a 40 meter dipole and a 15 meter
verticle. My favorite memories were, after we got our general
ticker, was fighting with my dad over who was going to use the rig
and seeing my dad in the ham shack filled by the sights of tubes,
sounds of the reciever, and the smell of the early boat anchors.
We were both members of the Wichita Ham club. Those were the best
days of my life.

Source record: 95177

Hello de K4YZ:

My first station was WN8OAH. I was licensed in 1972. I built a crystal controlled transmitter for 80 and 40 from an ARRL Handbook. It used a 6146 and put out a whopping 35 watts!

The receiver was a Heathkit HR-10B with the crystal calibrator built in. Selectivity was somewhere between "barn door" and "out house door"! I built it also.

I used an end-fed random wire through a simple L-match network which seemed to load up fine.

I had one 40 meter crystal which never seemed to want to load, but I also had a crystal for 3720 and 3748. Both worked well and I made hundreds of QSO's with this rig.

Looking at the rig on the desk now and considering what I had then, it's amazing that I made any contacts at all, but then that's the allure of the radio! Gotta love it!

My first rig (in 1960) was a Hammarlund HQ100AC and a HT40.
the HT40 was my novice rig (My dad and I both got our calls at the
same time and upgraded to Conditional in 1961). We were rock
bound. My first QSO as a ham was with ham from Canada. I was 12
years old then. His call was VE7BGL and mine was KN0KDD. I was so
excited that I could hardly copy. He was weak but I still got a QSL
card out of him. We upgraded to a Viking Valiant 1 when we got out
Conditional (I was K0KDD and my dad was K0KCX). We had a 40 meter
dipole, and a 10-20 verticle (It didn't work well). We put up an 80
meter dipole, but we could not get the SWR under 2.0 no matter
what we did. We bought a Hallicrafters SR-150 and a Gonset GSB 201
linear and an Heath kit SB301 (I assembed it with the help of dad).
WE used a thunderbird tr3 junior Antenna.
Still the best memories were of my father in the ham shack with
thte smells, sounds and sights. At night my dad often turned the
lights off. The Valliants 866 lit up the room with the help of the
other tubes. There was always coffee in the Ham shack
Those were the best days of my life.
Henry, K7WAR

Albeit that it was probably a "real" transaction, it nonetheless defies rational financial behavior. Looking at it from a purely business viewpoint, one must invoke the tenets of P. T Barnum! When a commodity is regularly traded at price X, and a transaction is conducted at 2X (or more), a question goes begging. The buyer may very well be happy as a pig in mud, but the question still remains....why? The other thing is (as a used to be Collins user/collector), that Waters junk used to detract from the price. Ahh well.... goes along with the $810 SX-28 and the $40 bag of 1942 US Navy cilica-gell, I guess.

My dad and I had shacks in two spots in the house during 1969. He had a
HQ180 and Eico xmtr and I had a T-60 and NC300. Boy he could wake me up
when he would call CQ on 40cw when I was already having a QSO on that
band....Of course I would never make a call without listening first...hi hi.

Guys,

Please note that items for auction on EBAY are not for sale here. They are for auction on EBAY. I can't tell you how annoying it is to open a For Sale message only to find it is another plug for an auction on EBAY. I (for one) would appreciate it if you would post your stuff as F.A. (for auction) for those who don't care to participate in the auction process. Anyone else think this is a good idea??

Thanks

Brian K3VR

I did and they wouldn't listen. So I quit! The thinking was so antiquated. The ARRL was just a good ol boys club and had no idea of what lay ahead of them. Now in the recent year they have started to realize if they don't move off their old ways there isn't going to be much of an amatuer population to be king over.

As for running for Kongress! Not in you wildest dream. Expose my life to every thug that wants to pry into it. Good greif! As much as the prying press and oppositionparties will do I don't think the Pope could get elected let alone Jesus Christ himself.

Regards
James

2755. Re: Help needed with National NC-300

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-08 00:00:00 UTC
From: Jim McNabb <wa9ylb@hotmail.com>
Message-ID: <3645BB57.4E35EA6B@hotmail.com>
Source record: 95200

I have 2 NC-300 receivers and there is plenty of audio in SSB or CW modes.

I would first check the setting of the Tone Control and make sure it is off.

Next, I would check the Select Control and make sure it is off. Also, adjust the phasing more max received signal.

Next, check to see if the problem is in the second IF. Does the problem exist in all three of the IF switch settings.

The NC-300 uses what National called a "heterodyne detection principle" which takes place at the output of the 80 khz (second IF V5) and the BFO (V8).

Make sure that V8 6BE6 is good and has the correct operation voltages.

Good luck, The NC-300 is a fine receiver.

Let me know if you have any more questions.

I agree with you, Keith.

I remember QSTs and handbooks from the 60s had in them projects for tranceivers, receivers, and transmitters that were the equal of any commercial rig. Check out the 1998 handbook-- direct conversion receivers, QRP transmitters, antenna tuners, et al.

If it is reasonable to homebrew sophisticated gear similar to modern commercial rigs, why are there no projects?

Gosh, Henry, you just reminded me of my own situation... my younger brother and I both had our tickets and shared a bedroom (too poor for 1 room per kid, and there were 6 kids). We had our station in the bedroom, and on weekends we would stay up all night taking turns working 40 meter CW. I'd work the band for an hour, then wake him up; he'd work the band while I took a cat nap; and so on through the night. We always walked around yawning and slightly dazed during the day. It was sure fun, though.

Dear All, I have a New-in-box J-38 key. If you want a flawless key for a display that includes the cardboard box, this could be it. Here's the scoop:

Manufacturer: American Radio Hardware Co.
Key Model: J-38
Label: Signal Corp U.S. Army
KEY J-38
Order No. 13947-Phila-43
Made By
American Radio Hardware Co., Inc.
New York City, New York
Comments: In addition to key, box contains a chromed wing nut with a matching brass screw and brass spacer attached. I do not know the function of these accessories. The cardboard box ends where the writing have punctures where the key moved back and forth in side the box. However, all writing is visible.
Price: $60.00 plus actual postage (no "handling" charge).

Thank You!

Derek Cohn

Hi,
I'm a big cw buff. Spent the weekend working Sweepstakes, the second most fun next to field day. Nice band conditions on Saturday, for a change.

Anyway, to my point:

I must admit we CW ops appear to be a dying breed. In November Sweepstakes this weekend, out of about 450 QSO's, I worked only two...count 'em, TWO stations with a check of 1990 or later. I worked about a dozen stations with checks in the 1980's. When I handed out my check (87) most asked for a repeat. Lousy sending? Not likely, thanks to Tree's NA program. Probably expecting a lower check!
Vast majority of my Q's fell in the 1950's and 1960's, and about the same amount in the 70's as in the 30's and 40's.

For those who dont know, the check is a 2 number exchange that designates the year in which an amateur operator first got his/her ticket. Does that mean newer hams are not into CW contesting? Guess it should be no surprise, but even the novice bands were pretty quiet. The contest was full of older folks. Where were all the 20 and 30 year old ops (or younger)?

No...this is not meant as a debate for or against CW. This is a CONTEST question -- why are younger folks not interested in "Radio Sport" or contesting?

On the inside rear cover of my August 1959 CQ magazine is advertised the National NC-400 receiver. Suggested list price is $895. With inflation that's about $9000 in today's dollars and you still have to buy the transmitter. Now that was a top of the line receiver, but that's still way more than today's expensive stuff.

2780. Re: What basic electronics book did you start with?

Newsgroup: rec.radio.amateur.boatanchors

My first real inspiration to build anything in electronics was a Cub Scout Book, perhaps the Wolf, maybe one of the others. It had a one tube radio that you could build for an arrow head on your uniform. I Learned a lot about radio things trying to gather the materials to build it--a project I never completed along with the rope making machinein the middle 1950's I finally built working things using an ancient copy of the RCA
Radiotron Handbook. In my old home town of Eureka, California radio and electronics were not hot issues. We got dial phones in 1953 and TV a few years later. I am not sure which event was more thrilling. If not for Allied radio and their stinking 10 and 1 lab I may never have been challenged enough to get into this communications racket. None of the 10 in 1 lab projects worked for me either. Command sets were my ultimate introduction into the ham world along with a pile of CQ magazines and a dog eared copy of the Editors And Engineers Radio Hanbook that I believe ante-dated Bill Orr.

Gord -

The 1232-A was the solid-state replacement for the combination of a
1231-series (tubed) amplifier and null detector with one of GR's
fixed-frequency or tunable filters.

Both null detectors were used primarily with any of GR's
audio-frequency bridges in conjunction with an external oscillator.
They could be used with a bridge without an internal
oscillator/detector, such as the 1603-A Z-Y bridge or the 1632-A
inductance bridge, or to provide variable-frequency measurements in
place of the internal fixed-frequency oscillator and detector in
instruments such as the 1608-A impedance bridge. I use my 1231-B and a
GR 1304-B beat-frequency audio generator with all three of those
bridges.

By combining amplification with a detector it is possible to null a
bridge more quickly and accurately than with a VTVM as detector.
Addition of a tunable filter eliminates hum and distortion products
from the null further increasing the accuracy of the null.

Specs are:

Frequency response: 20 Hz - 20 kHz variable plus 50 kHz and 100 kHz
fixed. Variable freq. filter bandwith is frequency dependent from 2 %
to 6 %. Response without filter is 20 Hz - 100 kHz +/- 3 dB.

Sensitivity: 0.1 microvolt

Gain: 120 dB

Input: 50 kohm at max. gain, 1 megohm at min. gain.

Max. input voltage: 200 vdc, 400 vac

Input connector is a GR 874, output connectors are binding posts.

Price: (from 02-Nov-1972 price list) $495.00

First off..... I use ebay..... it gives me a chance to locate gear
that I would not otherwise be able to locate..... I am not in or near
Dallas or any of the big cities. On a plus side it does put gear that
would normally go in garage sales into hands that could use it.
On the negative side, prices do sometimes get out of hand. As for
your comment on......

"really honest hams"

I see that as a slap in the face !!! Apparently you have not
attended any hamfests. It is not unusual for a KWM-2A priced at
$500 to sit during some entire hamfests. Your honest hams have
told you what it was really worth !!!!! What someone with more
money to spend, as we have seen, will give more. You should
personally apologize to the hams that tried to help you price the
equipment out. Just the way I see it.

2806. FORSALE - MINT Kenwood TS-520S + VFO-520S, great starter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-09 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7274jp$3o6@nntpa.cb.lucent.com>
Source record: 95079
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S plus the optional matching remote
VFO-520S that I would like to sell. In my opinion, the 520
and 520S are some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
The remote VFO is a wonderful option to have and gives
the capability to either run split frequencies or to flip-flop
between two frequencies.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $400 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

A Mac? Lets see, that's Apple's little Etch-A-Sketch, right? :-)
The graphic design industry seems to like it, and there are
a bunch of cheap or free graphic layout programs for it. (There
are better free tools for the PC, purpose written for board layout,
and more of them, but there are tools for the Mac which will
suffice.)

An inkjet printer is fine for printing on transparencies to make
exposure masks. Epson has some special inkjet transparencies
just for such use. You can also print 2x on paper and go to Kinko's
and have it reduced onto a transparency for a few quarters.
(This is actually the better way to do it. The extra quarters are
to do a few test copies to get the copier adjusted to exactly the
right reduction before you shoot the transparency for real.)

A cast off aquarium, pump, and heater, make a dandy bubble
etcher for free. And old Bessler enlargers can often be had
just for carting them away (the photo industry has gone to
computer printing). This way your transparency doesn't have
to be exactly 1:1, as it would have to be if you contact print.

>Using PICs, EPROMS, PALS, or GALS requires a programmer plus
>programming software. DSP development kits also cost significant
>money. Emulators for debugging this stuff cost *lots* more.

Well, once more you're hamstrung by the Mac. You can build a
PIC programmer for about $2 that works off the printer port of
a PC. For about $5 more, you can make it program PALs and GALs
too. The software to drive it is free, and available for download
from the net. A suitable DSP development kit for amateurs is
the Analog Devices EZ-Lite series, cost under $100. An ICE
is much more expensive, but a clever amateur can avoid the
necessity for an ICE with a bit of creativity. (I've always found
ways to debug systems without resorting to an ICE.)

>Actually writing software doesn't bother me - that's my background.
>But the cost of all of the associated hardware is daunting. I'd guess
>that it would cost $3K-4K (CDN) to obtain most of the stuff named above
>(without the in-circuit emulators). That's nothing at all for a
>business, but it's a significant amount of money for a student, and
>many times the cost of a commercial transceiver.

You guess wrong. Once you have the PC, the rest of what you need
won't cost much at all. Now you won't have a slick development package
like a $13,000 professional package, but it will do for an amateur on a budget.
In fact, up until a couple of months ago you could get a demo version
of that $13,000 package for free. It was limited to 30 devices per
design, but otherwise completely functional. A clever amateur could
break his project up into subsystems of less than 30 devices each,
and have all the advantages of a full blown professional design package.
(That's exactly what this clever amateur does. I have schematic
capture, spice simulation, board layout, and autorouting, all available
at the click of a mouse, and I didn't spend a dime for it.)

>Things are improving. PCs are now usable computers, and the next
>machine I buy will be a PC. There is now one place in town where I can
>buy a small selection of surface-mount parts in small quantities.
>(A few years ago there were none). Digi-Key has a Canadian arm now.

I don't know if Tech America ships up there, but I found out that they
have just started carrying small quantities of solder paste. That's
been hard to find in small amounts (and an amateur can't use up
a large amount before it spoils, solder paste doesn't store well).
I've been bumming paste from a local board house which buys it
in bulk. Now I can just drop by Tech America and pick up a small
amount when I need it. They have SMD parts on rolls too.

>I think that engineers working in the electronics industry don't have
>any idea how much more difficult it is to obtain resources that they

>books and good test equipment and an IR reflow oven and solder paste
>applicator and many other neat and useful things. But I lost access to
>all that when I left, and I'm dependent on my own resources now - which

>are limited.

Well, you just have to be a bit more clever. I still get some data books from the manufacturer's reps (you can usually get last year's books for free, just ask nicely), but mainly now you'll find the data is published on the web in PDF form, so you can download it as you need it rather than having to keep a large paper library.

Good test equipment can be important, but it can also be 5 or 10 years old (or even much older in many cases) and available very very cheaply on the surplus market. It isn't as push button automated as the new stuff, but it serves very well. Most of my test equipment is older HP and Tek stuff that I bought dirt cheap at hamfests. (Some of it needed a little work, most didn't.) My test bench has equipment totaling tens of thousands of dollars new price, but I didn't buy it new and only have hundreds of dollars invested in it.

You don't need an IR reflow oven, a little Pyropen Jr with a static hot air shroud and a steady hand will do. And the solder paste applicator is a wooden toothpick in my shop. I'm not in the mass production business, so I don't need the sort of equipment needed for that. You don't either. My SMD tool kit is a Pyropen Jr, a good jeweler's loupe, a sharp pair of tweezers, some wooden toothpicks, and a bit of modeling clay (the latter is to form heat dams so you don't reflow something you don't want to reflow when doing rework). You don't need a $1200 SMD rework station. In fact, though I have access to one of those, I find them usually more of a bother than a help. I can have the job finished before I could get everything disassembled and mounted on the stupid thing so I can use it. Again this is something you'd want in a production shop, but an amateur isn't running a production shop, so he can do without it.

Finding ways to do things cheaply, but still achieving professional results, is half the fun of working as an amateur. You can substitute a little ingenuity for a lot of dollars.

> If it is reasonable to homebrew sophisticated gear similar to modern
> commercial rigs, why are there no projects?

Very good question. I think there is very likely many reasons why you don't see such projects anymore.

Probably top on the list is the fact that commercial rigs have gotten much cheaper and much more capable. If you _aren't_ interested in homebrewing per se, but merely seek to get on the air inexpensively, modern rigs are an excellent solution. A certain number of those who used to homebrew were doing so largely as a matter of economics rather than real interest. The economics have shifted, and now these people can operate without the tedium of assembling a station from scratch.

Another reason undoubtably has to do with the rise of the Tech licensees. Techs operate on VHF+, in bands where traditionally hams have done relatively little homebrewing. Heck, it is pretty difficult to find any real ham literature on building (say) a 2m fm transciever, inspite of the fact that modern chipsets make it relatively inexpensive and simple. Is such a radio as fancy or small as your modern HT? Probably not. Can you learn alot from building one? Sure. And that is at least one of the major goals of amateur radio. Even if we do use commercial radios, we are supposed to know something about how radios work, and homebrewing is an excellent way to get hands on experience in how radios work.

Lastly is a question of focus. Much of the homebrewing that one sees is centered in the HF bands, mostly Morse, and mostly QRP. Why is that? My guess is that it is because most commercially produced radios are poorly suited for the type of operation that these people like to do. You can design and build a compact, simple, low power rig and put it in a nice small box. It can be cheap (< $100 easily), be relatively stingy on battery power, and suitable for portable operation. Because it is cheap, it doesn't need to be all things to all people. The QRP community has focussed on some important goals, and has delivered quite a number of designs that work quite well.

The unfortunate things is that other groups have not done the same. Recently on the back of QST there have been Kenwood rigs that act as either SSTV transcievers, or as GPS/APRS beacons. Pretty nifty gadgets. While reproducing the same level of compactness and ease of use is challenging, the availability of cheap FM radio components, cheap microcontrollers and dsp means that you can do much of the same sort of thing yourself, and much cheaper than Kenwood will sell it to you.

Want some ideas about fun, cool, inexpensive projects to do?

a) a number of designs for differential gps decoders are floating around the net that can be coupled with a commercial gps receiver to yield high accuracy positioning. The cheapest design I've seen costs about $25. The most expensive, maybe $100. b) How 'bout interfacing an ordinary digital camera to your HT for a SSTV encoder? No TNC, no PC. Just a small microcontroller that takes the pixel stream from the camera and sends it via sstv. Cheap digital cameras are dropping below $200, some even as low as $99. A PIC or Atmel microcontroller probably has enough oomph to make the encoder. c) How 'bout a portable QRP RTTY rig? PC keyboard for input, LCD display? d) Digital VFOs? The Analog Devices 9850 is a cute (if teensy) chip. Last I looked, they were around $20. e) DSP demodulators for the R2 receiver? Look at the SETI League's reciever, or articles in QST.

Just some ideas..

Mark

This isn't a very good excuse against using PICs or (my personal favorites)
Atmel microcontrollers. A number of VERY cheap programmers with free
software are available for both chip families. The Atmel chips I've been
using have 2k of flash memory on them, with a UART, an analog comparator, and
several other useful goodies. Atmel's own development kit costs $50, but the
software they give you can all be downloaded from their webpage. They have
both assemblers and simulators available. Very nice.

In-circuit emulators are nice, but you CAN develop programs without them.

You can experiment on a shoestring. Much of the equipment you mentioned is
nice to have, but far from essential.

The Internet has helped me locate suppliers for chips that a couple of years
ago just wouldn't have been available to me. Mail order is an excellent way
to go. Sometimes it does seem some creative begging/reorganizing is required
to get over some minimum order humps, but it is possible.

> I think that engineers working in the electronics industry don't have

> are limited.

Consider them challenges. One thing to consider is that if you are going to encourage homebrewing, not many hams would have all the test equipment you had anyway. A key part of the success of QRP homebrewing efforts is that people SHARE ideas and designs, and they get reused. Is it cool to use a $300 Xilinx FPGA to make a Reed Solomon decoder? Maybe, but I doubt many hams will be willing to cough up the bucks to make one. On the other hand, if you say "Gee, you can make a tremendously cool Morse encoder/decoder using this $3 chip, a few audio filters, and a $10 programmer you can build yourself", you might get more people interested. And that benefits the ARS as a whole.

>
> Thanks much - 73
> Gord

Description: The circuit consists of a low noise pre-amplifier, followed
by a frequency selective stage, and an amplifier-compresssor stage.
Transistors are used throughout. Tuning is accomplished by the
single-control RC network in a negative feedback loop.

Features: High sensitivity Typically, .03 microvolts at 1 kc. 120db gain.
High selectivity approximately 5% bandwidth. Very low noise, generally
below .1 microvolt. Continuous tuning from 20cps to 20kc.

Uses: Bridge detector fro audio frequency. Audio-frequency pre-amplifier
for oscilloscope, microphones,vibration pickups, and other transducers.
General purpose, tunable, or broadband audio amplifier (+/- 3db from 20
cps to 20 kc plus spot frequency at 50 kc and 100 kc).

All of the above is from General Radio catalog R dated May 1963.

Hope this helps. 73 Tom WB6IQD dunnt@cco.caltech.edu

>> estate is surely the beneficiary of this sale and thank God for
>> something like Ebay because the sharks would have certainly gobbled this
>> one up for the $ 600 that some would have liked for me to believe that
>> it was worth.
>>
I'm happy that you got the big bucks for the KWM-2A, but although I'm not a price cop, I have to defend the "sharks" on their opinion that $600 is about the average selling price. I've seen several at hamfests over the past year priced at about that, most recently at Findlay, OH, where one went unsold for $500. Here's some excerpts from AF4K's web page, (http://www.mnsinc.com/bry/ham/boneyard.htm) where he tracks asking prices on old rigs advertised over the net:

KWM-2A $450, 500, 600
KWM-2A w/attached PS $480
KWM-2A & 516F-2 $700, 725, 900, 1000
KWM-2A, 516F-2, 312B-4, 30L-1, CP-1 $1800
KWM-2A, 516F-2, 312B-5, 30L-1, CP-1 $2150

So, based on my experience and internet listings, you did very, very well, and there was no reason to attack the charactor of those who answered your request with the $600 figure. Looks like it's in the middle of the pack to me.

Folks,

I'm not sure that new rigs have become all that inexpensive relative to other things. For example, in 1973 it was possible to purchase a high-end HF transceiver for about $400 and a legal-limit amplifier for around $1,200. Now these range from $1,500 - $8,000 for the transceiver and $1,800 to $4,000 for a legal-limit amp (source: HRO catalog). This isn't much progress in pricing.....it's like buying a new car once you have the tower/antenna and rig in place. The situation for VHF/UHF isn't much better. What's needed is a return to "discretionary income" pricing levels -- after all, it's just a hobby -- right?

Have firm offers for the S-38C and Yaesu FRG8800. Thanks for all the e-mails.

I am currently conducting "one on one interviews" with all my radios. Radio's over 40 years old might have to be let go, despite their experience, to make room for younger foreign born radios. Also considering merging amateur equipment with other equipment...

More layoff's might be forecoming... -B

It is great to read all the wonderful stories that have been posted in this thread. It seems like there was (or is) some magic involved when you are using simple equipment to make CW contacts over what seemed then to be long distances.

However I have not seen any posts on this thread from hams using VHF or UHF HTs as their first station, with their first contacts being VIA a repeater. Is there just as much magic in this as there seemed to be in the old novice/crystal controlled/CW/lowpower era, or is it just all fond nostalgia?

Parting out a Collins KW-1 AM Transmitter.

Most parts will be thrown away. A few parts, like the vacuum variable will be used as target practice.

Chassis will be used to line a cat box.

Wiring harness will be cut for hookup wire.

A small amount of silver can be recovered from coils and switches.

Transformers will be sold as scrap copper.

If you don't want to see this happen, send lots of money now. I'm in the business of taking money.

Last year I sold my late father's KWM2A for about $400 for my mom. With a homebrew power supply. Probably the more common emblem, I'm not a Collins collector. Used to work years ago, didn't know current condition. My father restored it. Not prestine condition, but cleaned up.

Advertised it in this and similar newsgroups (not eBay), got a few responses (not tons of responses, so I probably didn't underprice it or overprice it). Think the buyer was reasonably happy with it.

It's quite possible that my father's unit was on the "low end" of the collector spectrum.

The buoyancy of an object is proportional to the volume of water it
displaces. Since, for a given volume, the mass of a tube is less than
the mass of water, the tube should float (as he says that he runs off
to the sink with a tube in his hands!).

Be careful you don't wash off the logo and tube number in the water.
The inks used on tubes were designed to wash off to fustrate would be
"recyclers" of used tubes to sell them as new.

From: Travis Martin <travism@door.net>
Message-ID: <72b15q$r6b$1@supernews.com>
Source record: 94911

This is definitely a boat anchor...it's pretty big. I mentioned it about 6 months ago before I got the station bought, but now it is for sale.

1kw, uses 833's for the modulator and finals. Looks really neat, like something out of a 50's scifi movie.

Let me know of your interest. It is disconnected and on a dolly now, but still out at the transmitter site of KDAV...

www.kdav.com

I neglected to mention in my earlier post that it is located in Lubbock, Texas and is in semi operational state; that is, I've powered it up and no smoke, but have made no attempt to apply plate power etc.I was told by the previous owner's engineer that it was usable as a standby, but make no guarantee, as I have not myself seen it operate.

I have the manual but forget the model; 443, I think. I'll go out and get the details in a day or two.

Thanks,

Travis

The return of the all priviliges General license would make the
oldtimers whole, as well a simplifying the license structure as the FCC
requires. The elimination of the Extra Class license would be logical
for simplification, but now another group would be mad for wasting their
time testing, and of course how would we know who to give the status 2
letter calls to?

> Still a lot of money.
> 73 George W3GEO

Thats probably an *average inflation* multiplication figure. Some things deflate while most inflate. I always figured multiplying the price by ten from the 50s when I was young. A Coke was a nickle then but .50 now. A car was $2500 then but $25000 now. But that doesn't always work. A transistor radio in the middle fifties went for a couple hundred dollars, but a couple of dollars now. A B&W TV was $500 then, but a similiar size color TV is $200 now. The last 2 examples were deflation. Computers are in deflation mode right now. Comparing the accurate dollar value of todays and yesterdays radios using a standard inflation formula may not be completely accurate. But I agree that today's radios are a much better value than in the past.

Hi from New Zealand,
Well I started amateur radio, with an Eddystone 840c, and a ZC1 MKII transmitter receiver. I don't thinl the "Hiker's One" one valve set qualifies as first set, but was first receiver. DL33 valve, 2000 ohm earphones, "Brown's Type "X" were preferred. This was soon followed by an AM transmitter, see mobile rig in possibly 1956 QST, with remote VFO to get away from heat within the AM rig cabinet. It ran 60 watts AM, with 6146 valve. Modulator was 807's in Class B, Zero-bias. Recifiers 866's and about 100 wats output in conventional heavy modulation transformer.

73, from Winton Bell. ZL4II, now ZL3AO.

In 1948 I was a Junior in high school and was very bored during a study period in the school library. I picked up a copy of "Understanding Radio" and my I lived with that book through my senior year. There is a later book now by the same name but this one had a gray cover and electrons were represented by little stick figures running up and down wires and water pressure and flow rates were used to explain how it all worked.

Anyone know where I can get a copy?

For Sale.

1. Zenith AM clock radio, model G516, S/N M-846438, 1950, black plastic case, front round brass metal tuning dial and the same size dial on the left for the clock, perforated grill with center Zenith crest, volume knob, tuning knob and 3 clock knobs. It's shape from the front is a flat top and large circular sides. It's appearance and condition are very good. The controls all work, even the tuning knob doesn't slip, and the clock runs. The radio has a very slight hum, the tubes light up, but there is no sound of stations being picked up. Price - $40

2. Weston Selective Analyzer Model 665 (multimeter), vintage 1935, condition good, meter reads but resistors aged, collectible - $25.

3. Panasonic miniature AM radio R-155, excellent condition, with box, 1965, 1/2 size of cigarette package, black/chrome case, black vinyl cover, AA battery, picks up stations 60 miles easily, collectible - $25

4. Akai 265D reel-to-reel stereo tape deck, excellent condition, broadcast quality, excellent sound even at 3.5 ips, up to 6 hours recording, records in both directions, with RR tapes, cost $850 new - $350.

5. Reel-to-reel recording tapes, some new in sealed box, some used once, 1800 feet, 7" reel, most Scotch/Ampex, few TDK, all high quality hifi tape, 35 tapes cost $450 - $180.

I live in Oregon, 97306. Money order payment, packaging and shipping costs will be added as required.

Could someone check out an old callbook (60's or 70's)
and give me details on K8KDR. He was my elmer a long
time ago and I don't even know when he was licensed or
what class he was.

Thanks much
Matt
K8KDR

2864. FS: OLD RADIOS, AKAI TAPE DECK, ETC.

Newsgroup: rec.radio.amateur.boatanchors

Source record: 94965

For Sale.

1. Zenith AM clock radio, model G516, S/N M-846438, 1950, black plastic case, front round brass metal tuning dial and the same size dial on the left for the clock, perforated grill with center Zenith crest, volume knob, tuning knob and 3 clock knobs. It's shape from the front is a flat top and large circular sides. It's appearance and condition are very good. The controls all work, even the tuning knob doesn't slip, and the clock runs. The radio has a very slight hum, the tubes light up, but there is no sound of stations being picked up. Price - $40

2. Weston Selective Analyzer Model 665 (multimeter), vintage 1935, condition good, meter reads but resistors aged, collectible - $25.

3. Panasonic miniature AM radio R-155, excellent condition, with box, 1965, 1/2 size of cigarette package, black/chrome case, black vinyl cover, AA battery, picks up stations 60 miles away easily on earphone, collectible - $25

4. Akai 265D reel-to-reel stereo tape deck, excellent condition, broadcast quality, excellent sound even at 3.5 ips, up to 6 hours recording, records in both directions, with RR tapes, cost $850 new - $350.

5. Reel-to-reel recording tapes, some new in sealed box, some used once, 1800 feet, 7" reel, most Scotch/Ampex, few TDK, all high quality hifi tape, 35 tapes cost $450 - $180.

I live in Oregon, 97306. Money order to include packaging and shipping costs as required.

Source record: 94966

For trade or sale:

1931 National SW-3 receiver, 6.3 volt version, very good cosmetical condition, no coils, complete with three tubes, no mods. Comes with home built power supply (made about the same time, I guess).

Will trade up for any German WWII radio equipment or for R-274 (SX-73) receiver (will pay difference), or best cash offer if no trades.

Also looking for RAL-7 receiver complete with power supply (good condition only).

Please reply to Vlad at: kb9olm@hotmail.com

Thanks,
Vlad

2867. R390 hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-10 00:00:00 UTC
From: chashugg@earthlink.NET
Message-ID: <36487DB1.62A6A303@earthlink.net>
Source record: 94968

Can someone help me id the possible cause of a strong hum in my R390(not A). It sounds like an AC hum to me. It is most noticable on strong stations. If I run 90 volts into the radeo via a variac, it is not so bad, but as I increased the voltage it starts popping then hums. I don't have a manual yet, but am hoping that someone can help identify the most likely capacitor that may need to be replaced. Also, any ideas on a source for the replacment capacitor.This is a really clean radio, otherwise, and I would like to get it going. It works great on all bands and is very sensitive. I think that if the hum were gone, it would be perfect. It is a Motorola model, late vintage.

Thanks for any help,
Charlie, K5MBX

>pricing levels -- after all, it's just a hobby -- right?

Now correct that 1973 price for the inflation started by Lyndon Johnson's
"guns and butter" budgets (multiply by 8). That 1973 transceiver costs
$3200 in today's dollarettes, and that linear costs $9600. But in real life,
a transceiver much better than a top of the line 1973 unit can be purchased
for about $1600 (and ones better than the average 1973 transceiver for
under $1000 street price). And a good linear still costs under $1200.

While our salaries generally haven't kept pace with inflation, most of us
are still making a large multiple of what a comparably skilled person was
making in 1973. So while today's radios might not be fully 8 times cheaper
in terms of man hours of labor, they are still considerably cheaper than in
1973.

The first one I got hooked on was "Electronics Made Simple" by
Jacobowitz. I distinctly remember the detailed discussion of the
tickler feedback oscillator -- I read that and read it and then BINGO it
made sense! I was fortunate enough that the book has survived the last
30 years and now holds an honored place on the shelf.

Not long after that I got my first ARRL Handbook (1967) and the 1967
Radio Handbook. I just about wore those out.

Hi all,

My trusty FDK Multi-700EX finally gave up the fight today, I had used it on packet for the last 20 years.

Problem is in the PLL circuitry, and is probably the final mixer Inductance going O/C....

Before I tear it apart further, Can anyone lend me the service Manual to copy....please...

It is too good to bung out, and anyway it was a good radio. Now using my old Alinco handie for packet, and that wont last very long!

Source record: 94979

It's hard to remember. Maybe not because it's longer ago than others, but it really was at a young age. Something made me curious about electronics, and so I started with whatever books there were in the children's library. Most of them were not electronic, but electric books and of course none of them were recent. I suppose if I came across them today I would recognize them, but I can't remember any titles.

I can't remember whether a knowledge of amateur radio came before or as a result of my interest in electronics. I also can't remember whether I rifled the adult library for electronic books at that time.

I do know that in the summer of 1970, when I was ten, I was off buying a telegraph set to learn the code because I knew you had to know it to get a ham license. This must have been some time after I was reading the books from the library, but I can't remember whether it was months or perhaps a year after.

In January of of 1971, I was at a newsstand and discovered the electronic magazines. The first one I bought was the January-February 1971 issue of Electronics Illustrated. Shortly after that, I bought the February issue of Popular Electronics. I think those, and the following issues I bought that year, were more significant than the books at the library. I didn't understand most of the contents at first, but I did look forward to each issue.

I was an "associate member" of the ARRL (ie I was receiving QST) in April of 1971. It was such an amazing magazine back then, either because it was new to me or because it still held old standards. The black and white cover, the pictures of amazing equipment that looked so professional and even carried "model numbers", the Jeeves catoons (I think they were still there), the sense of an organization that had been around since the beginning of amateur radio. And to a certain extent, my image of amateur radio is not of the early '70's, but of the thirties or so, because in those first few issues of QST that I got and read there were a number of articles that were about those times. Even an article about FM reception made a reference to the War of the World broadcast.

The first electronic book I owned wsa "How to be a Radio Amateur". I assume I ordered it after I was subscribed to QST, but I'm not certain. It was all so amazing, but in retrospect it's amazing how much of a beginner I was. I remmeber writing the ARRL technical staff asking how to add an S-Meter to the regen receiver in the book (I never did build that receiver), and getting an answer that it couldn't be done.

The second book I owned was the 1971 ARRL Handbook. I remember going through the receiver chapter, picking out stages to build a receiver,

without grasping the concept of the superheterodyne.

A few years later, I gave that Handbook and that "How to Become
a Radio Amateur" away to friends who I thought were interested in
getting ham licenses. I thought I didn't need those books, since I
was already an amateur and I had other handbooks. In the spring this
year, I found a 1971 Handbook for twenty cents at a book sale, in better
shape than I remember mine being when I gave it away. Looking at it now,
it's a far more exciting edition than the 1972 one that I've had all these
years.

After that, I bought what books were available at the local stores (there
wsa still a cluster of electronic/amateur radio stores downtown) and what
I could afford. The bad thing was I didn't have much money, the good thing
was the books were still fairly inexpensive.

Those books and magazines must have worked. I tried the test in May of
1972 (the earliest I could because up till that point you had to be
fifteenor over to get a ham license in Canada, and failed the code test.
I went back the next month, and passed.

The first Bill Orr Radio Handbook I got was the 19th edition, for
Christmas of 1972. It was a step up to, with it's hardcover.

> What was "incentive licensing"?

Incentive licensing in concept was probably a good idea at the time it was first discussed, but they way it was put into practice created a terrible situation which still has consequences today.

Sometime in the early 1950s, someone proposed that everyone who held a General or higher license be granted all amateur operating priviliges. It was about that time when the Novice and Technician class licenses came into being. The Novice was good for one year and not renewable. It was either up or out after that year. The Technician was designed for technical experimenters and was limited to operating priviliges, I think from 220 Mhz and up, with 50 and 145 Mhz being added later. In order to get the Technician, you had to pass a mail order written test which was the same as the General, and a 5 WPM code test if you were not a Novice and already had credit for it. I think that a Novice and Technician license could be held jointly by the same person if the Novice time limit had not yet expired.

In effect, the General class was the top of the line license as far as operating priviliges were concerned. After 1952, testing for the Class A (Advanced) license was dropped, although existing Class A holders could continue to renew as Class A.
No additional priviliges were granted to Class A operators.

This was the way of the ham radio world for 14 years.

In the late 50s, some deep thinkers somewhere decided that hams were not improving themselves for some reason. They were not changing over to SSB

as fast as they should and these deep thinkers thought it may have been because many of them were too technically ignorant about the then state of the art. In some quarters this was a scandalous situation. There was much discussion of finding a way to force technical competance via the testing and reserved operating privilige process. There was also some concern that many hams were letting their code skills slip because they spent too much time on phone. The appliance operator label was just coming into vogue, and it was thought that valuable design and building skills were being lost. This debate raged in the pages of QST for over 5 years.

The final result was that on a specific date in 1968, anyone who was a licensed General class operator lost a good amount of their operating priviliges on HF. Anyone who held the old Class A (at one time the top license in terms of operating priviliges) also lost a considerable amount, although not as much as the lowley General did. The Extra Class license became the new top of the heap and if you wanted your priviliges back, you had better pass the Extra exams with its 20WPM code requirement.

INHO the largest problems with Incentive Licensing were:

1.- Taking away priviliges that already had been earned. It should have affected new people entering the service, but everyone else should have been grandfathered.

2.- The most talked about reason, technical competance or the lack of regarding SSB had been effectively bypassed by the availability of commercial equipment which actually needed less ability to use than the old AM equipment. By 1968 the
technical argument was moot. Most of us were turning into appliance operators anyway.

3.- It caused a meltdown in the interest of ham radio in the years immediatly after 1968. Take a look at the size of the Cq, and QST magazines of that period.

4.- It was one of many reasons why American ham equipment manufacturers started to go out of business.

I will always believe that Incentive Licensing amounted to a power and privilige grab by a very few people in power at the ARRL who wanted what amounted to a "country club" operating privilige setting for the good ole boys in their circle. For a very long time I thought that the ARRL and the FCC thought that General class and below license holders were held in contempt. I was a memeber of a ham radio club in the late sixties which had a sign saying "ARRL's definition of a real ham...Extra Class License... 2 letter call" It took a long time for me to get over it.

It is interesting to note that the ARRL is doing everything it can to make sure that no one looses operating priviliges with the coming license restructure. I think this stems from bitter past experience.

Hello to the group;
I just wanted to say thanks to whomever started the thread, and to all of those respondees..
It has been a wonderful trip down memory lane..
The year was 1960, 15 years old, living in a small town in South Georgia, seeing several houses sprouting funny looking antennas and wondering what in the world they could be used for..
About that time my older sister began working for the local radio station WNGA, and the Engineer there was a fellow named "Sparks" Ridenour, and it turned out that he was a "Ham" Radio Operator, i haven't forgotten his call, but as days went by, i went to the station, was properly introduced, visited him at his home, and was hooked, Sparks became my elmer, along with another Ham in the area, K4JPY Jerry Bonham..Sparks admninistered the novice test and after waiting what seemed forever, it finally came in the mail, about the same time my Lafayette HA-30 receiver and my Eico 720 transmitter came,(i still have the Lafayette, but the Eico got lost along the way)..Fun, you bet, rushing home after school, and after homework, cranking up the rig and getting on the air with other hams around the area, listening through the static using just a long wire strung between two trees, one was across the fence into a neighbors yard, and they never complained!!
Soon though, the "need" to be on "voice" over took me, and back in those days if you were too far to travel to an FCC office you could have a General class ticket holder give you the tests and if you passed, become a conditional, which i did, and was soon on 75 meters AM, what a blast that was...conversing in real voice to some of the same people that i had been talking with on cw..
Was ham radio more fun back then, yeah, is it fun today, yeah, is it as much fun today as then, nah....
Thanks for the time and space

In article <3647AA96.8CD25545@yahoo.com>, k7joe@yahoo.com says...

> I must admit we CW ops appear to be a dying breed. In
> November Sweepstakes this weekend, out of about 450 QSO's, I worked
> only two...count 'em, TWO stations with a check of 1990 or later.

I worked just a little bit of the contest. My first contest, I
gathered a princely 16 QSOs (didn't have a lot of time). Yet out of
those 16, 3 had check digits of 1990 or later. I also spent most of my
time at xx.080 or higher frequencies.

> Guess it should be no surprise, but even the novice bands were pretty
> quiet. The contest was full of older folks. Where were
> all the 20 and 30 year old ops (or younger)?

A couple of observations come to mind. First, unless one is a
real dab hand at CW, there simply aren't a lot of opportunities to get a
QSO in the SS. The lower edge of all the bands is a huge mass of very
high speed CW. If your CW copy speed isn't at least 20-25 wpm, there are
very few CQs to respond to because you can't copy the call.
Sure, the upper band is open, but that's the problem...it's open.
Not too much activity there, and since much of it extends into the novice
bands, there are a number of low speed non-contest QSOs going on.
I think the idea of a CW contest scares people. I know it did me.
I have only been licensed for 3 months, and on a really good day I can
copy 16-18 wpm CW. I was very concerned about "looking foolish,"
although that changed pretty quickly. Still, the guys at the lower edge
were blazing along, and I didn't feel like I was helping by slowing them
down.
BTW, don't misunderstand me. I have only the best to say about
the contest folks. When I did stray down into "high speed" land and
managed to copy a call or two, the other operator never failed to QRS and
repeat as often as needed for me to get the entire exchange. That is
better behavior than I have noticed in general day to day operating. I
have often asked someone to QRS, been given a gust of high speed code,
and left with silence.

> No...this is not meant as a debate for or against CW. This is
> a CONTEST question -- why are younger folks not interested in
> "Radio Sport" or contesting?

I don't know if I am younger or not. 37 years old, licensed in
1998. Anyway, I had a good time, and will set aside more time the
weekend after Thanksgiving for the Phone SS. I certainly will feel a bit
more comfortable about my ability to understand.

As for contests in the future, I will continue. It is really just
a matter of setting aside the time. I'll even do CW contests...

This little receiver .5-21MHz was working till I broke a tube in it.
Looks good missing leather handle off the top for carrying. Would make
a good restorable radio for a Hallicrafter lover. $100+shipping.

I have in excellent condition a National NCX-500 80-10 meters SSB, AM and CW Tranceiver. This rig has new tubes and puts out over 225 watts. It includes the matching power supply, speaker and a copy of the manual. It has very nice quality audio. $325+shipping. JPG available if requested. 73 Chris VE3NGW/W4 Florida

> Lawrenceville, GA | Guaranteed |

Folks,

I suppose it's proper to think about these prices in terms of inflation,
but I've yet to see a legal-limit amplifier for $1200. For example, the
Ameritron 1500W units are all over $2000 (AL-1500: $2,695, AL-82:
$2,195). Rigs of reasonable capability are also pretty pricey today:
(FT-1000D: $5,459, TS950SDX: $5,299, IC-R9000 (RX) $7,508...etc). Aside
from filters and DSP "frosting" (and WARC bands), these rigs do not
perform much differently from their 1973 counterparts. I've made A/B
comparisons between an old Yaesu FT-DX 560 with a second VFO (250w
output all tube rig), a receiver preamp and a 400Hz CW filter with a new
FT-1000D, and for most normal operating situations, they have comparable
capabilities. While I agree that receiver selectivity is nicer on the

FT-1000D, the technology used in the FT-DX 560 is within reach of the homebrewer, while home-brew of an FT-1000D clone would be nearly impossible. I think that the thrust of this thread relates to whether one can build well-performing rigs for less money than buying them. While it would be a major project, I think that is it still possible to home-brew good quality amateur equipment for reasonable prices.

Folks, say what you will about eBay (Pro or Con) but their stock price today was at a high of $133 and climbing. On October 8th (just 34 days ago) you could have bought it at it's low of $25.25. Just think of how many radios you could have bought with that profit!

Gary,

Not to nit pick, but according to the official CPI measurements (found at
http://www.NewsEngin.com which is a resource for working journalists))
$400 in 1973 would actually be worth $1,427 in 1997 dollars. Multiply by
3.568.
Still a lot of money.

Jim the prblem is that the brass fingers that contact the var. cap. rotor
are
dirty. Gently pry them up <<JUST ENOUGH>> to get a piece of 400 grit
sandpaper under them andgently work the sandpaper back and forth.

If this makes you uncomfortable try a little bit of liquid wrench and work
the
cap back and forth a bunch of times.

Had this same problem on both my SX-100s and SX-28s. Easy to solve,
hard to diagnose! Hope this works. 73 John

I plugged $400 into a calculator that adjusts things for inflation, and $400
in 1973 inflation adjusts to $1483 or so in 1997 dollars. Of course, modern
transceivers are generally much more capable than the transceivers available
in 1973, supporting a wider variety of bands and operating modes. I'd say
in some very real terms that prices have fallen, and capabilities of modern
rigs has gone up.

From: Mike Shapiro <mikeshap@teleport.com>
Message-ID: <36478AD7.DAC372AF@teleport.com>
Source record: 95037

For Sale.

1. Zenith AM clock radio, model G516, S/N M-846438, 1950, black plastic case, front round brass metal tuning dial and the same size dial on the left for the clock, perforated grill with center Zenith crest, volume knob, tuning knob and 3 clock knobs. It's shape from the front is a flat top and large circular sides. It's appearance and condition are very good. The controls all work, even the tuning knob doesn't slip, and the clock runs. The radio has a very slight hum, the tubes light up, but there is no sound of stations being picked up. Price - $40

2. Weston Selective Analyzer Model 665 (multimeter), vintage 1935, condition good, meter reads but resistors aged, collectible - $25.

3. Panasonic miniature AM radio R-155, like new with box, 1965, 1/2 size of cigarette package, collectible - $25

4. Akai 265D reel-to-reel stereo tape deck, excellent condition, broadcast quality, excellent sound even at 3.5 ips, up to 6 hours recording, records in both directions, with RR tapes, cost $850 new - $350.

5. Reel-to-reel recording tapes, some new in sealed box, some used once, 1800 feet, 7" reel, most Scotch/Ampex, few TDK, all high quality hifi tape, 35 tapes cost $450 - $180.

6. Westinghouse table fan, black body/blades, vintage 1935, condition good, works fine, collectible - $35

I live in Oregon, 97306. Money order payment, packaging and shipping costs will be added as required.

Somehow, the contact is a lot more rewarding when you do it yourself, rather than letting some repeater owner do it for you.

And yes, there is something special about CW. Not because it's nostalgic, or because CW operators are a bunch of elitists, but because CW QSOs are invariably more friendly and relaxed, and because copying requires enough concentration to leave your mind completely clear and relaxed when you're done.

Bill - If you're serious about parting out a KW1, I need the following parts:

At the rear, there are six transformers in a row on a chassis. I need the second one from the left (rear view). Mine is leaking oil.

From the front, there is a filament transformer on the left side of the rectifier chassis. I need that one also.

I also need the vacuum neutralizing capacitor.

If you have any of these parts for sale, please let me know the price including shipping to California.

Thanks. Jim, W6OU.

Six transformers in a row. I need the second one from the left.

Along the lines of the "what radios did you start with" thread, another question would be "What beginner's book of electronics did you first read?"

I had a paperback copy of "Electronics for Everybody" by (can't remember, don't have the book handy right now). Described the simple stuff about batteries and light bulbs, then went on to describe simple operation of vacuum tube diodes, then triodes. Then described TRF radios. Not sure if this book attempted superhetrodynes.

Also remember the ARRL and QST articles on transistors. Seems they could have done these better, though.

2925. SX100 instability

Source record: 95050

Many years ago, a retired radio guy gave me a bizarre looking tube. It was made by Raytheon, part # QKK531, date code 7142. It even has a serial # (C39662). Recently, the radio guy headed off to that big T-hunt in the sky, so I can't ask him any questions about this tube.

I think he said it was either a klystron or a magnetron (don't those go in microwave ovens?), and he thought it would be an interesting addition to my tube collection. Since the highest frequencies that my tube circuits work at is around 20 kHz, I figured you boatanchor folks might know what this tube is, and what it can be used for. If it can't be used for audio (which is most likely the case), I'd like to sell it to (or do some trading with) someone who can put this tube to use.

If you can give me any info, please respond by email.

Thanks,
Tom Mitchell

Dear All,

I'm selling some German Telegraph Keys that I've picked up over the years. To help you guys identify these keys, I have refered to pictures that Tom Perera has posted on his web page. However, these keys are not those pictured in Tom's web page nor does Tom have any connection to these keys. If you find these pictures to be helpful, you might consider sending Tom an e-mail about his great web site.

1) Baumuster T-1 style key. This key has no writing on it except on the flip cover which says "VOR DEM OFFNEN STECKER HERAUSZIEHEN". Base is a fiberboard with two holes drilled in it. There is no cord but the spring strain relief mechanism is there ($60.00 plus shipping). This is similar (nearly identical) to the one *on the left* pictured in Tom Perera's Museum photo.

http://www.chss.montclair.edu/~pererat/9480.gif

2) Baumuster T-1 style key. This key has no writing on it except the flip cover which says "VOR DEM OFFNEN STECKER HERAUSZIEHEN". Base is a metal plate with a rubber "shoe" over it. There is also about 2 feet of rubberized cord. The holes in the metal plate appear to have been enlarged on this one but they appear to be in the same place as the photo in Tom's Museum ($60.00 plus shipping). This is similar (nearly identical) to the one *on the right* pictured in Tom Perera's Museum photo:

http://www.chss.montclair.edu/~pererat/9480.gif

3) German Flame Proof Key. This one has a rubber flip top cover and is marked "Spannung an der tastkontackten 200V max.ENTSTORT. " It's mounted on a blue iron base and has about 3 feet of rubber cord attached ($60.00 plus shipping). This is similar (nearly identical) to the key pictured in Tom Perera's Museum page:

http://www.chss.montclair.edu/~pererat/9469.gif

Thanks for the read and hope there is something here you like! If you are interested in a key, please specify a second choice (if you'd accept a 2nd choice) in case someone has spoken for the first one. Also, please include your mailing address so that I may calculate shipping for you.

Have a great day!

I think that what you are alluding to here is an inherent feature of the SX-100's design (main tuning capacitor driven by helical gears). One nice feature of a cord-driven system is that it seems to absorb the shocks a bit better. I would, however, *love* to be corrected if I am wrong about this.

One other quirk about this SX-100's tuning that I have discovered with mine (and am curious as to whether or not any other owners experience this) is that when you tune the radio in one direction, and then reverse the direction of the tuning, there is a momentary "backwards" jump of the tuning before it responds in the correct direction. For example, if you had the BFO on, and you were beating against a carrier, and the pitch of the beat were increasing as you tuned the radio higher in frequency (you had already passed the zero beat), if you reverse direction on the knob and go back towards the zero beat there will be a momentary where the audible pitch jumps higher before the tuning actually starts to reverse. This is more noticable as you go higher up on the bands, which you'd expect. I'm wondering if it is some sort of backlash problem with the gears, where they need to "reseat" themselves depending on the direction of tuning. I've spent hours grappling with the mechanics on this, and have only been successful in minimizing the problem, but never getting rid of it completely. It kind of makes the radio difficult to tune on the upper two bands, especially SSB and CW signals, as you tend to "slip" back and forth across the frequency that you wish to tune to and are sort of forced to rock the knob into place.

I'm certain that it's an issue with the gear drive of the main tuning capacitor, as the bandspread is cord-driven and does not experience the same problem. I suppose that I could get the receiver close with the main tuning and then go the rest of the way with the bandspread, and work around the problem that way, but it seems like a "bandaid" and not a real solution to do that.

No problem with the radio apart from this; the rest of it works wonderfully...

>letter calls to?

Simple:
The FCC mandates all U.S. amateur licenses to expire at
11:59 p.m., UTC, December 31, 1999.

The FCC mandates all current amateur radio licensees must
re-test prior to that date and time in order to be licensed
at the level of examination for which they pass all the
required components. Prior license level irrelevant and be
damned; no "grandfathering," no "good ol' boy" actions
permitted.

A 90-day grace period, beginning 0:00 a.m., UTC, January 1,
2000, will allow "last-minute exam-takers" to continue
operating while their examination results and applications
are processed.

Those current licensees who do not re-test, or who the FCC
says are not yet certified as licensed by the end of the
90-day grace period, must cease operating until such time
that they re-test and are officially certified by the FCC as
licensed.

Piece of cake.

Everybody wins: Equal opportunity testing; trying out the
new licensing standards (whatever they come to be); more
stuff for the VECs, ARRL, Fred, et al, to do.

Now *everybody* can whine ... ;0)

2936. Eico 615 tube tester adaptor

Rob:

You should be able to find very similar knobs at most electronic supply houses, even Radio Shack. Or are you restoring it, and concerned about maintaining original parts?

The majority of "horse hockey" we've seen here seems to be coming from
your end, Terry. You sold your KWM-2A at a price substantially higher
than usual on eBay, and rubbed our noses in it enough already. Now,
it's time to "let it go".

-- HELP!!
I am in need of some help, regarding a base radio, i have just acquired. This Mastr Radio made by General Electric, was used
previously by our local ambulance, tuned on 158.760Mhz. I am in need of a set of manuals for it. and if anyone has information
on making this rig full duplex would be appreciated. I also have an Interconnect for it...CS-700 Model. Crystals anyone?
I would like to use it for local Repeater, or the very least tuned for rx & tx on a specific repeater tuned on rx:146.310Mhz tx:146.910Mhz

Most of the whinning about ebay is just sour grapes. People whinning because someone else was willing to pay more and keep them from getting the item at a 'steal.' How did Terry make a hobby into a greedy money grubbing exercise? He put an item up for auction and at least two people wanted it bad enough to pay a good price for it. I suppose if you had been selling the item you would have stopped the bidding at a low price so as to not be greedy? Yea, right. I guess by your definition, all the ham radio dealers are making a hobby into a greedy money grubbing excercise since they try to sell ham gear at a profit.

>
>Thanks for any help,
>Charlie, K5MBX
>
Charlie, a couple things to check. Check the filter caps (on the non-A they
are underneath on the PS chassis [I think]). Check any decoupling caps
on the 6080 tubes (again, it's been 15 years since I've had a non-A I'm a
bit
fuzzy on this one). Last, is your radio grounded (and not just through the
outlet!)?
A ground loop can exist if your antenna is connected (thru the shield, etc)
to another
piece of equipment. Try using the balanced antenna input (antenna in to one
hole, ground to the other, not grounded to chassis) and see if it goes away.
If
so, that's your problem.

Another thing to check is heater-cathode leakage on all of the tubes. This
will
hum-modulate signals pretty well.

Look at the B+ with a scope - there should be minimal, if any, 60 Hz. If
this comes
up clean, look at the output of the detector to see if hum is riding on the
received
signal. If not, look forward to the audio stage.

Hope this helps. 73 John

2953. FS: 6146 , 4CX250B and others

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-11 00:00:00 UTC

Just sorted out a mess of new or like new tubes from my radar
station estate purchase:

10---Eimac 4CX250B's in opened/ratty original boxes---tubes are in the
plastic bags but have been opened [for testing?? who knows why
the military does things?] Silver has tarnished but tubes have seen no
use. I'd like to get $35/ea on these--money back guarantee.

9---6146(no suffix) New tubes, no boxes, most are RCA $10/ea

3---6146W New Sylvania's, no box $12/ea again fully guaranteed

13---6293 New RCA's, no boxes---this is a pulse rated 6146B--works
fine as a regular tube--same specs except pulse rating on the
plate is 3500!!!volts [only for 10,000 microseconds though] This
is one tough little tube. $10/ea

Thanks, Craig

2954. Re: Sweepstakes CW -- anyone else notice the low CK's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-11 00:00:00 UTC
From: Steve Murphy <k8vo@massnet1.net>
Message-ID: <72dedb$ck2$1@trellis.wwnet.net>
Source record: 94878

I first noticed the low ck's when I operated SS for the first time, about ten years ago. This seems to still hold true, as I worked very few people with ck's in the 80's or 90's. From my own perspective, it seems contesters in general are getting older, which kind of parallels the amateur population in general. When I got my license at 23, I was one of the youngest hams in the area. Now, at 36, I still seem to be one of the youngest.

Since I wasn't prepared to operate SS competitively, I fired up the old BA station and had a little fun searching and pouncing with the SX-101A and HT-32, which really made me appreciate the scores from that era! Things that we take for granted with modern rigs, like not having to zero-beat the xmitter to the rx, make a huge difference. Still, it was a riot!
73,
001 A K8VO 86 MI BK
(actually, over the weekend it was K8FBI 98 MI... operating the Flying Beers International club station.)

Still sorting from my radar station estate find:

10ea 4CX250B's Eimac New in opened/ratty cartons---the plastic bag around the tubes has been opened and the tubes are tarnished. I will guarantee them to be new however. $55/ea

3ea 6146W Sylvania New/no boxes same deal as above $15/ea

13 6293's mostly RCA new/shiney tubes--no boxes--this is a pulse rated 6146B--works fine as a regular tube--pulse rated for 3500 volts on the plate!!![only for 10,000 microseconds]--specs are the same as 6146's. Real cheap at $10/ea

9 6146(no suffix) new/no box's mostly RCA $10/ea

All plus post or UPS. Thanks, Craig

2960. FS: R390A Speaker Unit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-11 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <364A543C.CB644D2@calweb.com>
Source record: 94884
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: R-390A speaker unit. Dual speakers in rack mount enclousure,
contains a pair of PM speakers and 500 internal 500/VC matching
transformers. This is the last one from my GRC-26D radio collection.
Average condition, no dents or holes, could use a good polish job.
Otherwise it is in good condition. I do not remember the unit's
nomenclature. It has two switches on the front panel that turn each
speaker On or off which are stock items. Connections to the speakers
are via terminal strip on rear of unit.
$125 plus ups on 20 lbs from zip 95827

Tnx for the read

BC-939/339 Antenna tuner. This one was built for the T-368 but will bolt right up to the BC610 as well. Gray Crackel paint, not flat black. Unit is complete and nondings or dents or major crud. I'ts been in storgage for a few years and will probably have a few rusty screw heads, but nothing that wont clean up. Everything is there and it all works. This rascal is heavy and kind of delicate and will require versapack shipping at UPS.
$175 plus UPS on about 50 lbs from zip 95827. Figure versapack fee at $15///

Thanks for the read es 73

TECH QUESTION.

This receiver has recently developed a hum. Q: How do I diagnosis this.
It does power up, but just hums. Is it just maybe just a filter Cap for
the transformer ? I'm a newbie when it comes to repairs. I would like to
get this thing fixed before the auction ends!
Thank You in advance for any help!

BBWOLF

I am selling five (5) 6146B beam power amplifier tubes. They are Chinese, and are used/pulls. They came out of an Ampeg SVT that I converted to 6550's for one of my customers. I just tested them today on an emissions tester, and all five peg the meter. (The sixth tube, alas, is weak and is headed for my "dead soldiers" box.) Each is stored in a sturdy white box.

All 5, $40 preapid by money order, I pay the shipping. Continental US 48 only, please.

Respond by email if interested,
Tom Mitchell

More often than not, I get *this year's* data CD's just for asking.
If one has the guts to walk into an electronics trade show, they'll do
quite nicely. I've done this a lot and if you're nice, polite,
curious and *persistent*, you can get good info, occasional freebies
and learn a hell of a lot. Technical reps love it when you talk to
them in specifics about a pet project, whether it's yours or theirs.

(The web, generally, has made it *much* easier to get info from the
manufacturers. Fill out forms on their website and you'll often get
CDs, mailings, sometimes even samples.)

OK, so why is the DSP chapter in the ARRL Handbook so *opaque*?
I don't hate math, but math education seems to hate me. Did lots of
math for my CS. Agree wholeheartedly that it's important. All but
failed miserably at it. (I worked like a dog just to get by.)

Lacking a "DSP for Dummies", it may forever be opaque to me. Pity,
not for lack of trying. This isn't a Luddite rant BTW. I like
advanced technology and want to see hams using some, rather than
trapping themselves with CW. And I am _second to none_ when it comes
to the desire to learn new things. (Hewlett-Packard has an excellent
tutorial on digital modulation on the web, and I feel like I'm the
only ham who's read it.)

But I do wish some of the CW proponents who tell me I am not trying
hard enough, would take a higher-math curriculum, or some other
specialty that is brutally difficult, and get no other help than "Try
harder and stop whining, #$#$!@##$#@!" Preferably math taught by some
of my professors, who had absolutely *no* clue on how to teach (a
problem with the math field in general.)

When this issue last came up a few years ago, weren't you the one to
point out that EE's, especially newer EEs, weren't really "with it" as
far as practical experience? Bob Pease complains about this all the
time in his columns, and the posted experiences of a few EE's seem to
bear this out ("I'm a BSEE and I don't know how to fix my TV!", for
example.)

Source record: 94924

I started out in electricity with my 3rd grade science book (in 1952) that showed how to connect a light bulb to a flashlight battery. My dad brought home a copy of "How to Become a Radio Amateur" when I was in 4th or 5th grade and a new copy of the 1955 "Radio Amateur's Handbook". Those pretty much hooked me on radio. Around 1956, I found "Radio For The Millions", a compendium published in the late '40's by one of the handy-man magazines of the time (Popular Science? Popular Mechanics? Something else?) that had all kinds of neat radio circuits to work on. Still have the original '55 handbook (it's covers fell off long ago) and a copy of Radio for the Millions.

Got my Novice in 1957 (WN6SFH) and started on the air with a Philmore NT-200 and an S-38 that my dad had bought a few years earlier when he was thinking about getting a ham license. Still have the NT-200.

For Sale:
(Add shipping costs to all prices)

Military surplus - Signal Corps BC-1033-B VHF receiver, 28V DC.
w/relay and uses 12SN7, VT220, 6SH7 tubes
Will sell for only $15.00

Power supply and Foundation - chassis plus front panel.
Ideal for homebrew project such as amplifier, small to medium
transmitter, receiver etc. Chassis is about 15" wide X 9" deep and
front panel is wrinkle gray aprox. 12" high X 15" wide.
Contains 100 watt AC power supply and numerous caps, chokes etc.
4 Octal tube sockets and 7 miniature 7-pin sockets with shield
holders. Front panel has 3" diameter meter cut-out and
two potentiometers with 0-10 scale. Two SO-239 chassis connectors
are brought out. Also switch, fuse and 6.3V panel lamp with
yellow bezel. Will sell for $15.00

Rare RCA Antique Receiver: Surplus mobile receiver
type DJ-1 marked "Justice Department." Inside lid says:
MODEL M-104 Superheterodyne Receiver. Tubes included: 41, 6B7,
6A7 and two 6D6es. Has original list of RCA patents and a
Guarantee label. Outside plate has: RCA model EG37A1 Serial number 500.
Unmodified. Minor surface rust. Approx 6" X 8" X 8".
Inside is immaculate. Vibrator supply and 5 tubes.
Frequency appears to be in the VHF range. Will sell for $25.00

1981 ARRL Handbook, excellent condition $15.00

Hallicrafters Manuals:
HT-46 $8.00 each (1 repro only)
SX-146 $8.00 each (1 repro only)

More books below...

Naval Electronics HT Audio Booster - top-of-the-line model HTS-3 new,
with manual. Has auto tape recorder control, on/off switch, and runs
on either four $$ batteries or AC power pack. Will sell for $20.00

Military Surplus keyer, model F16-K-49161-1001.
Interesting boatanchor what's-it - Keyer/selector/amplifier
assembly, with eleven miniature tubes on a small chassis
approx 6" X 9" x 3". Has Chicago Transformer output
transformer Class 1A, some 400V capacitors.
Tubes are types - OA2, 6AQ5 (2), 6AL5, 12AX7 and 12AU7.
Most of the tubes are there... a couple are missing.

Looks like it was remote controlled. Several potentiometers,
a lamp jack? (991) and switch etc. Approx 1955 vintage.
Also has a storage tag mentioning 1961. Will sell for $15.00

POWER ONE Power Supply Model HC5-6/OVP-A
5 Volts DC at 6 Amps. Heavy Duty construction.
Adjustable voltage and also adjustable current limit
controls. Requires 100/120/200/230-240 V AC
Over-voltage protection. Less than 5 mV ripple.
0.3% stability or better. 0-50 degrees C.
Military spec construction. With connection data and
service data. List price $125.00
Will sell for $25.00

BALLAST TUBE TYPE B (variable) Octal, black $5.00

Maxtor Hard disk drive model 7120AT Capacity 120 MB
In excellent condition. NOW ONLY $20.00

ST-225 MFM Hard Drive 20 Meg Now only $10.00
ST-251 RLL Hard Drive 30 Meg Now only $10.00
MFM Controller card with cable (Free with drive)

Fujitsu Printer model DX-2300 Color and black inking dot matrix
printer in EXCELLENT condition. WIndows 95 and WIndows 98 compatible.
single sheet or tractor feed. $30.00

Printer A-B Switch - New, with standard 37-pin Centronics Connectors.
Nice beige metal mini-cabinet. $7.00 each (have two)

Serial A-B Switch - New, with standard 25-pin Connectors.
Nice beige metal mini-cabinet. $7.00

Koss HP/3 Stereo "ear buds" brand new in package $3.00 each
(includes protective wind-up carrying case)

Tubes:
807W (5933) $10.00 each
(Ruggedized 807)

Television For Radiomen, by Ed Noll. 340 pages, illustrated
1962. Front cover torn a little but otherwise very good $6.00

TV SICK? Service your own TV, by Belmont TV Co.
33 pages, plus sale flyer, 1975 MINT $3.00

METHODS OF TEACHING SHOP AND TECHNICAL SUBJECTS by Leighbody & Kidd
College text, 201 pages, excellent condition $8.00

A quick web search pointed to KDAV in Lubbock, TX, home of Buddy Holly.

I wonder whether Travis is ghoulish enough to link this transmitter to
the late singer. There's actually a very good chance that Holly did
at least one live broadcast using that transmitter.

Could you imagine that transmitter for auction on Ebay? It'd sell
for a million bucks! (NOT!!!)

Yes, some things go up and some things go down in relation to the "average
inflation measurements. Looking at the various index's, electronic goods,
and other consumables, as you mention have certainly deflated in terms of
real dollars. Some of this is probably due to cheap overseas labor as well
as much more effecient production methods and the economies of scale.
Groceries have also underperformed the CPI in many cases.

Unfortunately the other side of that includes things like the price of
house, rents, health care, health insurance, automobiles and trucks, car
insurance, school and college tuitions etc have outstripped the average
inflation. This is why it is a little troubling to use the CPI as a
blanket indicator for COLA adjustments which are pegged to it such as
social security or military pay. Many industries do this also.
You might not need a new electronics, which have gone down, but your rent
may have gone up a good percentage and your health insurance either rises
in cost or has its coverage cut. In many cases, you fall further behind if
your COLA is based on the "average inflation"

Not in any way to detract for the originators post, I am certain his tested tubes are just fine. For everyone's info, my agency, via a "low bidder", got stuck with 100 Chinese 6146's. Our reject rate was 84 ot of 100! The few that worked, worked. Reason for rejection was typically GM from 30 to 60% of rated go/no-go values. So 100% acceptance testing is mandatory!!!

:> I think it is too much to require people to learn outdated and irrelevant
:> skills, no matter how easy.

Show me what's outdated and irrelevant about tradition ? Ham radio communications, in fact, all wire and wireless communmications, began with Morse Code. What's so irrelevant about learning it ? I do believe that a 12 WPM proficiency test is the only cw test anyone should make anyone else take, and only because it's an ITU requirement. Not just the arrl, but the whole world. I also believe that every ham should build at least one functional cw transceiver in his ham career, maybe before he gets signed off to take the test to upgrade.

: Note that the very hams who want to force "outdated and irrelevant skills"
: on all HF amateurs are the very ones who object to the learning of up-to-date
: and relevant skills. Why am I not surprised?

Outdated and irrelevant are still in use. There are tubes in use in Linear Amplifiers, so you should know them. There are transistors that are used in modern rigs, so you should know them. There are RF safety factors involved, you should know them. BTw, do you want to use data on the air ? How about explaining the Kiss protocol, ax25, tcpip, and the functions of a tnc before testing ? Wait a minute, how about the declination of an orbiting platform ? What is the optimum circumference of a radiator made for a certain band out of aluminum ? Believe me, you should know about discrimination in an FM transceiver. YEah, these old guys, they make it really tough on you.

Whine - Snort - Cry - Cajole - Whimper - What a bunch of horse hockey - They just won't and can't let it go - now we have the CIA investigation techniques known only to some "really" smart one of a kind people who are the only ones who really "know" how to detect a schill in an auction ! Good God, I cannot believe the incessantly stupid comments about this auction and even on the microphone auction as well. Sure is going to be interesting reading by the time that all of this estate is auctioned off ! Come on you closet whiners, get your fingers limbered up so you too can put in your two cents worth as the weeks roll on! Should keep the volumes of crud coming by the bucketsful to all those persons on this reflector who could care less about this issues from the price cops, the schill cops, the clandestine investigators who believe "they" have the insight of the prophets and those multitudes who believe that they are the great prognosticators of "THE PRICE" that an item ought to be worth (at least to them). If the gentlemen who thinks he is so darned smart to state that the microphone went to Japan had done any kind of homework before overloading his better sense with pure garbage spewing from his mouth, he would have found out that it did NOT go to Japan, it went to Ohio - which the last time I looked on the map was in this country, not across the ocean. First they overload me with low ball offers, then they whimper and cry and make all kind of accusations about schills, the Japanese buying up all our old hollow state equipment, that soon they will see it again for sale by me - even thinking much less stating that I would pay $ 40 to Ebay for the pleasure of buying it back?? Now that is rich, someone really needs to see a shrink on that comment. - -

Quit griping and complaining - you had your shot and blew it. If you obviously don't like Ebay, you did the right thing - you didn't bid on it - and I surely respect your not wanting to bid on an item. But that is not the case with all the whiners because some of the whiners did bid on it and got angry when they were overbid by someone else. C'est la vie

In spite of the disagreeable trivia that has been sputtered over the last week or so about this auction sale by a few old soreheads, I have received a much greater number of memos from people on this group that were affirmative about disregarding the comments from a few old curmudgeons that don't have a clue.

Isn't that what makes this a great country? You can publicly say just about anything, even to the edge of slander and most probably get away with it. In spite of the negative commentary, I respect anyone's ability to speak their peace, even it has not one shred of validity, not one ounce of fact, and is pure hypothesis. Even in the great arena of cyberspace, they can nit-pick, whine, slander, and hypothesize and don't

even have the guts to deliver a message with who the sender is.

Boy, ain't this great!

I bought this apparently swept RF generator to align old radios. Now I got it, but I can't figure out how to use it.

It has an input jack and a CRT. What's that for? Signals at the input jack appear to drive the vertical amp of the CRT. The lowest RF freq (about 5 MHz) is too high to drive the input.

The unit has a tuning dial marked on the front panel "wavemeter", that doesn't seem to control anything and has no external inputs or outputs, and it has a bandswitched swept RF oscillator whose frequency is controlled by a pot (unclaibrated).

Does anyone know how this thing is supposed to work and what it's for? If I don't find out soon I'm going to take it apart...

Thanks

Hello George,

I partly agree, and partly disagree. The idea was good, but the implementation
wasn't.
>
> Sometime in the early 1950s, someone proposed that everyone who held a
> General or higher license be granted all amateur operating priviliges.

Actually, it's a lot more complex than that. From the early '30s until 1951,
there were effectively two classes of ham license - Class A, which became
Advanced, and Classes B&C, which became General and Conditional,
respectively. All required 13 wpm code, but the Class A had a much tougher
written test, required 1 year of experience, and the test could only be taken
at an FCC examining point - and you got no credit for exam elements taken by
mail. The reward for a Class A license was the ability to use voice on 20 and
75 meters - Class B and C hams' voice privileges were restricted to 160, 11,
and 10 meters on HF, and VHF/UHF. There were no 30, 17, 15 or 12 meter bands
then, and 40 had no phone segment.

In 1951, the FCC made some major changes. The Novice, Technician, and Extra
Class licenses were introduced, the A, B and C licenses renamed, and the FCC

announced that the Advanced would be phased out and that an Extra would be needed to have access to all amateur privileges.

> It
> was about that time when the Novice and Technician class licenses came
> into being. The Novice was good for one year and not renewable. It was
> either up or out after that year. The Technician was designed for
> technical experimenters and was limited to operating priviliges, I think
> from 220 Mhz and up, with 50 and 145 Mhz being added later.

Agreed. The Novice was meant as a sort of learner's permit, and you had only one shot at it per lifetime - you couldn't get another Novice, even if you took the test again.

> In order to
> get the Technician, you had to pass a mail order written test which was
> the same as the General, and a 5 WPM code test if you were not a Novice
> and already had credit for it.

Novice and Tech were given at both FCC offices and by mail until 1954. You had to live 125 miles from an FCC quarterly examining point to take an exam by mail. In mid-1954 the Novice and Tech became mail-only, and the Conditional distance shrank to 75 miles.

> I think that a Novice and Technician
> license could be held jointly by the same person if the Novice time limit
> had not yet expired.

Absolutely. The holder had two callsigns, and which one you used depended on the band. The same person would be WN3XXX on 80 CW and WA3XXX on 6 meter phone.

>
> In effect, the General class was the top of the line license as far as
> operating priviliges were concerned. After 1952, testing for the Class A
> (Advanced) license was dropped, although existing Class A holders could
> continue to renew as Class A.
> No additional priviliges were granted to Class A operators.

Nor to Extras.

What happened was that after years of announcing that the Extra was going to be the top license, the FCC did a quick about-face and did exactly the reverse, giving all privileges to Generals and above. There were about 40,000 Advanceds and Extras at the time who saw Generals/Conditionals get the same privileges they had taken much tougher tests to get.

>
> This was the way of the ham radio world for 14 years.

1953 to 1968, I think. I can look up the exact dates. Actually a very short time, historically.
>
> In the late 50s, some deep thinkers somewhere decided that hams were not

> improving themselves for some reason. They were not changing over to SSB

> many hams were letting their code skills slip because they spent too much
> time on phone. The appliance operator label was just coming into vogue,
> and it was thought that valuable design and building skills were being
> lost.

The concern came from the FCC, who had started the whole trouble to begin
with.

>This debate raged in the pages of QST for over 5 years.

1963 to 1968. Some wag coined the phrase "invective licensing", which was
pretty accurate.
>
> The final result was that on a specific date in 1968, anyone who was a
> licensed General class operator lost a good amount of their operating

> although not as much as the lowley General did. The Extra Class license
> became the new top of the heap and if you wanted your priviliges back, you
> had better pass the Extra exams with its 20WPM code requirement.

It was a little more involved in how this came about. The FCC expressed
concern about the situation in the late '50s and early '60s. The ARRL
responded in 1963 with a simple proposal (RM-299) - go back to the old
system, where an Advanced would be needed for 20 and 75 phone. No complex
mess of subbands, just bring back the old system. The FCC asked for comment,
and got a pile of them. No less than 10 got RM numbers. From these came the
idea of subbands, and three layers of HF privileges beyond Novice. It also
produced some other ideas like replacing the Advanced with a new "Amateur
First Class" that would require 16 wpm code and a tough written exam,
existing Advanceds being demoted to General, and a two-tiered phase-in that
would reduce the Generals' HF privileges by almost half - phone and CW. The
last three were fortunately defeated by protests from the ARRL and others.
You should see the FCC's proposal of 1966 - it makes what actually came to be
look mild.

>
> INHO the largest problems with Incentive Licensing were:
>

This caused tremendous resentment of both the ARRL and the FCC.
>
> 2.- The most talked about reason, technical competance or the lack of

> regarding SSB had been effectively bypassed by the availability of
> commercial equipment which actually needed less ability to use than the
> old AM equipment. By 1968 the
> technical argument was moot. Most of us were turning into appliance
> operators anyway.

The development of amateur SSB transceivers and grounded-grid linear amplifiers meant that a ham could buy a legal limit sideband station for about as much money as building a 250 watt AM station from new parts. And it took up a lot less space. When companies like Heathkit offered rigs like the SB-100 for about $400 (as a kit, but with power supply), the future was clear.

Some of us, however, did not turn into appliance operators.
>
> 3.- It caused a meltdown in the interest of ham radio in the years
> immediatly after 1968. Take a look at the size of the Cq, and QST
> magazines of that period.

In some circles, yes. I was first licensed in 1967, and didn't understand what all the fuss was about. I thought,"So you get your code speed up a little bit and study for a written test. What's the big deal?" But many others felt their "rights" had been violated.
>
> 4.- It was one of many reasons why American ham equipment manufacturers
> started to go out of business.

Possibly. There were a lot of other reasons, many of them simple economics.
>
> I will always believe that Incentive Licensing amounted to a power and

> contempt. I was a memeber of a ham radio club in the late sixties which
> had a sign saying "ARRL's definition of a real ham...Extra Class
> License... 2 letter call" It took a long time for me to get over it.

The FCC, not the ARRL, was the instigator of the whole thing. I sometimes wonder if "Sputnik fever" had something to do with it - after Sputnik went up, and the Russkies started winning the space race, there was a lot more interest paid to science and technology.

The ARRL concern, as I see it, was that ham radio was on the road to becoming a strictly hobby service, full of folks with little technical knowledge and few operating skills who used store-bought equipment that they didn't really understand. They were afraid that such a service would not be able to justify its spectrum allocations, or even its existence, for very long. They were trying to reverse trends they thought were not in the best interest of ham radio.

There was also the fact that the FCC was going to do something, no matter what. So the League leadership had to do something that the FCC would accept - they thought if they just said no to the whole thing, the FCC would come up with something much worse. Look at the 1966 FCC proposal, and think what ham radio would have been like if it had been fully implemented.

Support for incentive licensing was split almost right down the middle, with a very slight majority in favor of it, by most reliable polls. The trouble was that the opposition was very bitterly against it. The bad feelings echo to this very day, 30 years later.

>
> It is interesting to note that the ARRL is doing everything it can to make
> sure that no one looses operating priviliges with the coming license
> restructure. I think this stems from bitter past experience.

I agree 100% on that point.

BTW, incentive licensing went into effect November 22, 1968, almost 30 years ago exactly. The second phase, set for a year later, was never put into effect by the FCC.

>Adam Adkins, KM5SS
>adam@onramp.net

Adam has some very good points when it comes to CW contests. I'm 39 years old and have been a ham since 1976, however, I have been out of the hobby for the past 8 years. I just this year got back into it and I have spent most of my time on CW on HF. Getting my code speed back up is what I have been doing on the HF bands.

I must agree that the idea of a CW contest does scare me a little. I did make some contacts on the TenTen contest a week or two ago. But I thought, if someone wants points that bad, they will answer my slow CQ's, and a few did. From that I think I found how to work a CW contest when your are a little slow like me. Just find a quite spot up the dial and call CQ. People will come.

I think for the most part, CW operators will put up with slow CW stations knowing that that is better than no new CW stations. If all CW stations were fast then you have no new comers and by that CW will die.

Hi,

I recently acquired an old Knight Kit R-100A receiver, and it is missing a main tuning knob. I've scanned a couple of images in of it so you can see how it
looks. It is about 1.9 inches in diameter.

A photo of the front is available on the web at:
http://www.wwc.edu/~frohro/Knight_knob_top.jpg

A photo of the back of the knob is on the web at:
http://www.wwc.edu/~frohro/Knight_knob_bottom.jpg

If you have a spare, please send me a note!

Thanks & 73!

Rob, KL7NA/W7

I understand your concern. I routinely steer clear of Chinese tubes. These, however, were originally purchased from Antique Electronic Supply as a matched sextet, which indicates to me they were pre-screened for duds. They got less than 6 month's use in the amplifier before I pulled them. None of my testers will check gm on this type of tube, but the emissions test was fine (except for the sixth, which came up weak...and I rejected it).

Still, these ARE used tubes, and the purchaser must understand that they are being purchased as-is. I'm totally open to any (reasonable) offer on these. I don't use this tube type, and they're just taking up space in my parts bin.

Best Regards,
Tom Mitchell

>
>Thanks for any help,
>Charlie, K5MBX
>
Charlie, a couple things to check. Check the filter caps (on the non-A they
are underneath on the PS chassis [I think]). Check any decoupling caps
on the 6080 tubes (again, it's been 15 years since I've had a non-A I'm a
bit
fuzzy on this one). Last, is your radio grounded (and not just through the
outlet!)?
A ground loop can exist if your antenna is connected (thru the shield, etc)
to another
piece of equipment. Try using the balanced antenna input (antenna in to one
hole, ground to the other, not grounded to chassis) and see if it goes away.
If
so, that's your problem.

Another thing to check is heater-cathode leakage on all of the tubes. This
will
hum-modulate signals pretty well.

Look at the B+ with a scope - there should be minimal, if any, 60 Hz. If
this comes
up clean, look at the output of the detector to see if hum is riding on the
received
signal. If not, look forward to the audio stage.

Hope this helps. 73 John

>failed miserably at it. (I worked like a dog just to get by.)

The Handbook chapter may be poorly written because the authors haven't the knack for distilling a subject down to its essentials in a small space. It requires a deep understanding of a subject to communicate it well. That's why I generally find physicists to be the best math teachers for engineers. They are trained to see the concrete physical links between phenomena and the math models used to model them. The math major often can't see beyond the manipulation of equations, and the engineer often doesn't have the necessary deep physical insights into the phenomena.

But even so, it is fairly rare to find someone who understands a subject deeply and is also competent to convey that understanding to others. People like Feynman who can vividly convey the connection between the reality and the model don't come along every day. And there is a related problem. First you have to understand the signal before you can understand how to process it. Many amateurs don't have that understanding, so naturally they become lost in an explanation of DSP.

But there are books which do a good job of explaining things in terms that the reader can grasp. As I usually do, let me recomend Stephen Wilson's _Digital Modulation and Coding_ as a starting point. He gives you the needed background to understand signaling theory and signal construction in an extremely lucid fashion. After you read Wilson, tackle _Modern Signals and Systems_ by Kwakernaak and Sivan. With Wilson as a lucid background, it will expand your view to include general analog signals. Now you'll be equipped to understand the sorts of digital and analog signals you're going to digitally process.

Then you can go on to actual DSP texts. One such text that I'd recomend is _Digital Signal Processing, A Practical Approach_ by Ifeachor and Jervis. If you hit this one cold, you'll be hopelessly

lost. But if you first develop the background provided by the two books I mentioned earlier, it will make sense to you. Only at this point should you tackle the manufacturer's DSP databooks. That'll teach you the mechanics of implementing the algorithms you'll have come to understand.

There is no DSP for Dummies, and there likely cannot be such a book for those who wish to develop DSP systems. It could only tell you how to *use* a system developed by someone else. Well, perhaps I'll retract that and point you to Oktay Alkin's _Digital Signal Processing, A Laboratory Approach Using PC-DSP."
It sort of falls into the DSP for Dummies category in that it tells you how to use an existing software tool. But without the background provided by the other books, you won't really understand *why* the things you're told how to do work.

>time in his columns, and the posted experiences of a few EE's seem to
>bear this out ("I'm a BSEE and I don't know how to fix my TV!", for
>example.)

Yeah. A newly minted EE is pretty much a blank slate, ready to have
the practical matters not covered in his education transferred to him
by experience. He has more than enough background to understand
his job, but he lacks the experience to know how to carry it out in the
most practical way.

The technician often has a wealth of practical experience, but doesn't
have the theoretical background to put it into context. He knows lots of
tricks for dealing with specific problems, but often doesn't know why they
work, or how to apply them to a novel context.

Ideally, what we want is something which blends the two, taking from the
EE the deep knowledge necessary to understand a new context, and taking
from the technician the tricks of the trade which can be applied to the
problem. We don't need the breadth of the EE's knowledge, but we do
need its depth in certain narrow areas. Fortunately, our curiosity as
amateurs can drive us to seek out the necessary depth in the areas of
specific interest to us without requiring us to undergo a full EE curriculum.
Experience we get the old fashioned way, by hands on experimentation.

> > down.

If you gave them a QSO at any speed, you were definitely helping. Most (I think) guys will QRS automatically when they hear you come back (or call CQ) at a lower speed. I had one or two guys come back to me beginning with the command: QRS. That's a good, direct way to communicate what you need. (Some older hams may send slowly due to hand coordination problems, arthritis, etc., but can still copy high speed fine. So you're not sure whether to match his slower speed.)

I often drop my speed and move up to 060 or higher to work some slower ones, not because I'm a nice guy but because I need the QSOs.

User-hostile contest programs can make it hard to QRS. But sophisticated ones like TR-log have single key QRS (and whatever the opposite is ...) control, for quick and easy QRS and restore. Also, TR-log has a database of calls and can actually access the preferred speed of the station being worked and match it. (I'm not sure how the speeds get into the database, though.)

3016. Serindipity in Boatanchor Land

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <364B08EE.5B3C@ix.netcom.com>
Source record: 94770

I'm going to tell you a Veteran's Day story you
aren't going to believe, but it's 100% true.

My father, Leo Stinson, 76 years old, served his country with the
2nd Battalion, 12th Infantry Regiment, 4th Division in Europe.

He was in combat almost continualy from the time he
landed in France until Germany's final surrender.

I've managed to find a few details over the years.
He doesn't want to talk about it much and I don't want
to drag him back through that horrible nightmare.
He was there in the Hertgen Forest when the defending
German 88s were turning his buddies into hamburger.
One of the few things he told me about was the terror
of being under shell fire. "You don't think you can get
your whole body inside that steel helment, but you can"
he said, and his voice still trembles a bit at the memory.
And the Bulge: "Lots of running, lots of snow, lots of
getting shot at."

Long ago, when I first started showing an interest in
military radios, my daddy told me another story.
"The first few months (of service), the only radios
we had were old morse code things that looked like
they were from the first war."

I contacted a gracious gentleman in north Texas a few weeks ago.
He had some military radios to sell and I went up
to see and purchase them. One was a BC-9-A, a battalion-level
transceiver built in about 1922. This one had been
oversprayed with OD paint, but was otherwise in
excellent shape. I could see that the original finish
was still intact under the paint. So I took it home
with me.

A few days ago, I got out my polishing compound and began to
gently scrub away the overspray, hoping to recover the
majority of the original finish. These radios typically
were marked with the crossed-rifles of the infantry
and the battalion/regiment number to which it was assigned.

As I rubbed I could see that the markings were indeed intact.
As they came clearer, I was at first doubtful of my eyes,
believing it "wishful thinking." But it wasn't

This unit belonged to the 2nd Battalion, 12th U.S. Infantry.

I called my father and he was excited to hear about it.
He wanted to know who had it, where had it been?
I'll be taking it up to him on Thanksgiving, and I
can't wait to see his face. It was probably out
of service by his time, but who that was not there
can say that? He told me they used whatever they
could find in the early days, including "old first war stuff."

I've posted a web page with photographs at:

http://pw1.netcom.com/~arc5/bc9.htm

3017. Two newbie questions...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: John <mstr-jl@swbell.net>
Message-ID: <J9D22.7907$3Y3.21009@typhoon01.swbell.net>
Source record: 94771

New to the world of boat anchors and having a great time. But, I'm starting to do my own repairs and re-conditioning and have my first few questions...

First, I need to know how to clean up the chassis of an Drake R4. The cooper chassis looks dull and has developed some green (oxidize?) spots that are eating into it. What do you use to clean up a chassis that won't hurt the other components or discolor it worse? Plus, other than the chassis, what's a good "general purpose" cleaner for the face and sides to take off the years of grime that are caked on them without taking off the paint or lettering?

Second, when someone says that the "caps" need to be replaced, I assume they mean capacitors, but are there particular ones that normally need replacing after so many years, or just all the caps in the radio? I've seen messages from news group members saying they've replaced ALL the caps...is this something I should routinely do to old gear? I'm obviously a little confused on that point.

Email responses would be appreciated. As other questions come up, I would appreciated having someone to ask...

Thanks,

John

I have a set that I am thinking of parting out
it is a T 217 - R 278 series.
I believe that this particular set came from the Lubbok
FAA control tower.
The thing is built to withstand a fall <IMHO> It tunes from
220-399mhz, and is AM only. I do not know the
actual output of the xmitter, BUT the chain goes
as follows.....
6v4 <X2> into 2c39 into 2c39 into 4x150 <x2>
This unit comes with the matching power supply
and the cabling to make it work together.
It will do whatever <150 watts carrier I believe>
all day, all night and into next year. This is VERY
heavy, and I WILL NOT SHIP. IT will be for pickup
or delivery in 200 mile radius of North Ft Worth TX
and available until 11-25. IF I get no resonable offer
I will part the unit out.
I do have some brief diagrams of the unit, and the
schematics are on the sides of the perspective
units. I am sure that because of the era, the reciever
sensitivity is not the best it could be.

I will entertain best offer OVER $150 plus gas money.
There is at least 150 dollars in the 2c39/4x150 and
sockets/chimneys. Not to mention the SUPER heavy
duty power supply that could be built from this unit.

I can be reached via email at
km5rt@ticnet.com

thanks for your cosideration

I usta maintain these beasts for the FAA at Bakersfield. Indeed they
are well built and it would be a shame to part a working unit out. They
will do a nice job on 220 AM as I made a couple of experimental 220
contacts back then.

Source record: 94778

I have one, and I think know what it is for, but there are a few front
panel connections and sitches that I can't figure out. Can anyone help?

Mystery inputs are labeled as follows:
RH and GR (binding posts in upper left corner)
GA 1 and 2 (binding posts in upper right corner)
BA + and - ; these are for an external battery- what is min/max voltage?

Mystery switches:
GA two positions labeled RVM and HIL
VAR two positions labeled RES and MUR

Can anyone tell me what the switches and inputs are for?
Anyone got a user's manual?
There is a schematic of the unit inside the case.

Thanks,

MR

My first station was a DX-40 and a VF-(VFO). We I first set it up, it
developed a slight chirp. Replacing the oscelator tube (don't remember
the number) fixed the problem.

Want: HAL DS-3100ASR Terminal
with or without accessories including
the HAL disk unit.

What do you have?

What condition is it in?

Does it work?

What version of firmware does it have
installed in it (Look at screen on the
'3100 at power-up for the version
number - should probably be 3.x
or 3.xx or some such in the top
left or right hand corner)?

Do you have any manuals for it?

What do you want for it/ them/ the pile
of stuff?

What OTHER HAL stuff do
you have that you'd like to
get rid of?

Where are you located?

Thanks for your time

For Sale or Trade- I have a Collins KWT-6 Transceiver (ssb, cw, rtty) that covers 2-30 MHZ. It is in very good condition, but probably needs alignment as the receiver drifts a bit. It is in a 7 foot tall rack and weighs about 300 pounds. I will consider any reasonable offer or trade for ?. Transmitter uses 2- 4CX250B tubes. This radio is built like a tank. e-mail to n5nbk@nortexinfo.net Thanks- Dan N5NBK

If it's corroded badly, you may not be able to do much more than stop
further corrosion. I had an R4-B that had the same problem, I think it
was caused by dissimilar metals.

>Plus, other than the chassis, what's a good "general purpose" cleaner >for the face and

I'd use waterered down windex and a cotton handkercheif.

I think they mean the paper filter capacitors (which can go-off like an
M-80 when they go bad). Ceramic caps should be O.K. if still working.

3043. Loose Coupler Xtal Set-can you I.D.?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: Carter Grabarczyk <k8vt@ameritech.net>
Message-ID: <364B7600.B6DA50C5@ameritech.net>
Source record: 94797
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I recently acquired a loose coupler crystal set and have some questions, so I thought I would tap in to the collective wisdom of the net. You can view this set at:

http://www.ameritech.net/users/k8vt/Crystal.htm

(sorry for the 'capital C')

BTW, the wood box in front of the coil contains a 2.5 uf capacitor. Once you have viewed the set, my questions are...

* Homebrew, commercial or homebrew using a commercial loose coupler? (There are no signs of a label or tag).

* What approximate vintage might this be?

* re: the wiring diagram. I am used to seeing a .001 uf capacitor ACROSS the earphones. This set has the smaller sliding coil in SERIES with the detector, earphones and 2.5 uF capacitor. (The set came with Kellog earphones, but didn't get a picture of them to post).

* I know enough not to strip the original shellac finish and refinish it, but is it OK to clean the wood and polish the brass?

* If the answer to the above is "OK to clean", what is recommended to clean the wood base? Gojo or plain mineral spirits? What about the brass? Brasso, Naval Jelly, CLR? How about cleaning the coil?

* As you can see, the cat's whisker, knob and shaft are missing. Any clue as to what the original looked like? (or is it obvious- AES cat's whisker, a brass rod from the hobby shop and whatever kind of small knob I can round up?)

* Lastly, what might the approximate value of this set be?

Thanks in advance for any and all advice!

3047. Yaesu twins info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: Bill Wyatt <bwyatt@onenet.net>
Message-ID: <364B8222.7322A40F@onenet.net>
Source record: 94801

Hi everyone, it's been a long time since I posted anything to the BA group, good to see it is still healthy and happy.

I just made a great find at a local hamfest last weekend. There they were sitting all alone on the table, a pair of very clean Yaesu twins. The FLDX-400 and FRDX-400 for 150.00 and I got them for 100 bucks. They are scratch free and show no wear marks. The only problem is the owner was a smoker and there is a fair amount of smoke on the inside. I've been cleaning with some alcohol and a small brush, looks like they will cleanup nicely.

Now for the reason of this post. I have the original instruction manual's for the radios but, would like to find a shop manual. I plan to operate these on the air. And, who wouldn't when you put a tube rec. up against a solid state one.....the audio is great. Also, I need some information on just how old these radios are, I'm guessing the mid 60's but not sure.

Did they come before, during or after then FTDX-560 and 570? I had both these radios and loved them. Also, anyone that has used or owned these radios, I would love to hear your stories.....they have to be great. I'll close this out before it becomes a book, thanks for listening.

Bill N5WO

FORWARD THIS INFO TO AS MANY AS POSSIBLE!!!

That number posted of 502.625.9959 rings a bell..... That's the number he originally listed for his Business Trunkcomm. Trunkcomm's business address is 5703 Bluegrass parkway

Although I've let a detective john Herbst from the St. matthews Police department know all this information. they have been unable to stop this guy. Det. Herbst's office is 502.899.2535

Some additional info on T. Kasey Thomas E Kasey aka E. Thomas aka Chuck Ezell aka Thomas Elwin beware of an S. Hanks as well
trunkcomm, trunkman, ethomas91and maybe as many as four more from hotmail, excite and AOL including HAM callsigns one of them being WB4UMR
DOB 2-11-71
SSN 404.27.6044
His KY Drivers Lic lists
7017 Billie Lane in Louisville as his last know address.
This is the one he gave prior to his arrest and bail a couple of weeks ago.

He has taken most of us at 8108 Lake Terrace suite 10 in Louisville
His landlord is Westbury apartments at 502.426.4817. they may have a forwarding address, as well as the post office, since he's still got funds comming to the Lake terrace address.

Some additional contact numbers worth exploring are:
502.426.8662 (note 502.426.8661 is listed in some of his E-mails)
502.426.8511
502.267.7224

I have reason to believe that he and his girlfriend Ms S. Hanks (aka SKANK hahahaha) are involved with a multilevel fraud with a local fundraising organization. This is called Entertainment Fundraising 1257 Herstborn Parkway in Jeffersonown.

Also, money Now KY Inc. is doing his money laundering Money Now deposits it's funds into the PNC bank. The Money Now office on Hikes in Louisville has knowingly cashed these fraudulently obtained money orders. Thier number is 502.456.6663. Spoke with a jerk-off named Scott....he threatened to SUE ME..... and told me to contact his manager, Mark Atterbury @ 502.364.1634. He doesn't return my calls. They have another office on taylor Blvd, 502.375.2274, ask for Tammy

Would someone please get this guy!!!!!!!

I hope any of this information will prove useful in his demise.

*** Well,

This wasn't the first book, no sir. But I had a big hardbound "diary" book that I copied schematics into. I'd take the streetcar down to that big old greco-victorian main library in San Francisco, and head for the technical stacks. They had bound volumes of QST and CQ magazines. Also Popular Electronics, Electronics Illustrated, and probably others I don't remember.

I couldn't afford to xerox pages, so I sat there in the stacks and copied down all those schematics of neat things to build. Transmitters, receivers, code oscillators, BFO's, VFO's, SWR meters, etc, etc.

Never did have much money - started a habit of cheapness that has persisted to this day :-). My mom would give me fifty cents a day to have lunch in the cafeteria. Don't anyone tell, but I never once stepped into that cafe in all my years in high school. Instead, I saved all the money for electronic parts.

Once, I got ten dollars for my birthday. I rode down to "Marty's Super Surplus Mart" and walked around there for over an hour, agonizing over what to spend it on. Finally, they threatened to throw me out of the store, and I settled for a Weller dual-post soldering iron.

I just use household mild detergent cleaners like Cinch or Formula 409 for the exteriors, and sometimes use an old toothbrush to get into cracks and crevices and to work on more stubborn dirt. Sometimes it helps if you let the cleaner sit for a minute or two I've never had anything like this attack anything on the cabinet of a radio, but it will take the brand logo off of vacuum tubes, so be careful cleaning those. Probably better just to use a dry cloth to clean dust off of tubes, and don't rub too hard.

Going to have to punt on the copper question -- have never experienced this myself...

> Second, when someone says that the "caps" need to be replaced, I assume

> confused on that point.

Only the ones that suffer from deterioration due to age -- these would be ones such as the power supply electrolytics, paper/foil tubulars dipped in wax, and those black tubulars with the coloured stripe coding like you see on resistors (I had one of these actually leaking fluid in my SX-100 before I re-capped the rig). Most mica and disc capacitors, compression trimmers and variables can be left alone.

What still baffles me is my HQ-180. Built in 1962, but *none* of the caps anywhere are showing any signs of age or deterioration. Not even the power supply filter. A lot of the tubulars used on this one are those ones that look like Sprague "orange drops" but are the same colour as silvered mica discs. I'm actually glad of this, as recapping in the vicinity of the IF strip and selectivity turret on this radio is a job I positively dread even thinking about... :^) it's completely original and unmodified, apart from tubes and pilot lamps, and I think I'm going to leave it that way.

C.K.

George

The VHF and UHF bands were indeed "magic" at one time. Here in
New England, this occurred in the mid 60s, a time before many repeaters
were on the air, and before the manufacturers jumped on the wagon
and turned it into a CB radio type money machine.

Early FMers were a close knit bunch. I remember the thrill of getting an
old
military VRC19 up and running on two meter FM. I also remember the
old tube RCA clunker mobile I ran in my first car--the dynamotor would kill
the battery in five minutes of TX time! Anyone who was on FM either had to
modify an old commercial two-way clunker, or convert some military rig to
ham
service. Everyone helped each other to get on the air, and to keep the
stuff
running. We even had some OTs who modified their old Gooney boxes for
FM! Those were fun days, before it became another appliance operation.

Regards

Pete

3056. Capacitor Replacement??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: djkc6ssf@sonic.net
Message-ID: <djkc6ssf-1211982257030001@d124.nas21.sonic.net>
Source record: 94810
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I have an old multi-voltage power supply for a tube set and I blew it! It converts 120VAC to 6v, 250V and 400V.

One of the electrolytic Capacitors blew its top. But it is a strange beast with three leads; two on the plus end and one at the Neg. end. About 1 inch Dia. and 2 inches long, dull orange color, Great that the label fits so much writing.

Item is:
Solar Minicap Dry Electrolytic Capacitor
Cat. No. M2x8-450
8+8 MFD
450 W.V.
528 V.S.P.

It appears to be a "tubular multiple section" cap, based on my 1963 ARRL handbook.

So, can I replace this with two modern 8 MFD at 450 V electrolytic caps?? Would this be a DC or AC rating? does it matter

Thanks: David Jackson, KC6SSF

3057. FS: Yaesu FT-101EE, $320 shipped

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-12 00:00:00 UTC
From: n3bj@hotmail.com
Message-ID: <72dcdt$n24$1@nnrp1.dejanews.com>
Source record: 94889
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale: Yaesu FT-101EE, about a 9.5 out of 10 cosmetically, 10 out of 10 electrically. Works just the way it should, some very minor scuffs on the case. Plastic still on the front panel, which is perfect. Includes original hand mike, AC and DC cord, original manual.

Totally unmodded, but does have 11 meter xtal installed.

Alan, N3BJ
Bent Mountain, VA

I have a DX-60B for sale. I put all new caps and tubes in it. Had it on the air all day on CW 60 Watts output from a new GE 6146W. On AM it has nice audio and its very stable. I repainted the cabinet grey and it looks good. This is a nice AM Tranmitter or a CW workhorse. Just add a crystal or get a VFO and you'll be on the air. $90. 73 Chris

> An elderly carpenter was ready to retire. He told his employer, a
> building contractor, of his plans to leave the house building business and
> live a more leisurely life with his wife enjoying his extended family. He
> would miss the paycheck, but he needed to retire. They could get by. His
> employer was sorry to see his good worker go and asked if he could build
> just one more house as a personal favor. The carpenter said yes, but it
> was easy to see that his heart was no longer in his work. He had lost his
> enthusiasm and had resorted to shoddy workmanship and used inferior
> materials. It was an unfortunate way to end his career. When the
> carpenter finished his work and his boss came to inspect the new house,
> the contractor handed the front-door key to the carpenter. "This is your
> house," he said, "my gift to you." What a shock! What a shame! If he had
> only known he was building his own house, he would have done it all so
> differently. Now he had to live in the home he had built none too well.
> So it is with us. We build our lives in a distracted way, reacting rather
> than acting, willing to put up less than the best. At important points we
> do not give the job our best effort. Then with a shock we look at the
> situation we have created and find that we are now living in the house we
> have built for ourselves. If we had realized, we would have done it
> differently.
> Think of yourself as the carpenter. Think about your house. Each day you
> hammer a nail, place a board, or erect a wall. Build wisely. It is the
> only life you will ever build. Even if you live it for only one day more,
> that day deserves to be lived graciously and with dignity. The plaque on

3084. paint speck remover for radio cabinets

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-13 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <72igmoqpc1@supernews.com>
Source record: 94716
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Pardon me if this is common knowledge, but I found this very helpful.

If you collect old radios, you know that their cabinets seem to act as magnets for paint specks, which can be hard to remove. I recently got a Hallicrafters S-38 covered with thousands of paint specks in multiple colors. Someone's shop or barn radio, based on the evidence. I was ready to write off the cabinet and repaint it, but a pal recommended a product called "Oops!", which removes latex paint.

My local Home Depot store didn't have any Oops!, but they did have "Goof-Off 2," a kinder, gentler, non-stinky version of the original Goof-Off solvent. To my delight, it removed every last speck from the cabinet, even those on the comparatively soft plastic dial cover. It also removed all grime from the cabinet and left it smelling sweet instead of like a chemical plant.

I applied the cleaner and let it sit for a few minutes, then rubbed very gently with a soft damp sponge to loosen the specks. The original lettering was not harmed, although I avoided rubbing the lettering any more than necessary. When the job was done, I gave the whole cabinet a rinse with clear water. It's important to let the cleaner soak in for a bit. If you spray it on and wipe off right away, the specks will just laugh at you.

Your mileage may vary, of course. If in doubt, test on an inconspicuous corner.

Cheers.

Phil

3085. WTB: JB-70 junction box for BC-610-I

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-13 00:00:00 UTC
From: Ron Ostman <w0nyq@minntaccdp.com>

Can anyone give some general info on the BC-620 radio - e.g., operating frequency range, power supply needed, field of use, etc. Also where I might get maintenance and operating manuals. Have seen one installed in a WWII Dodge recce car and would like to get it operational if possible. All help gratefully received.

Source record: 94724

I have a couple of them. Not a bad little rig. Easy to overdrive and some FMing if you are not too careful. There were a number of mods to fix the FMing..and perhaps minimise the VFO drift (VFO runs on 9 Mhz for 80 and 20 meters and 12 Mhz for 40 meters which invites thermal drift in a mass produced vfo..But as a whole the rig is ok and runs CW as well as SSB although only lsb on 80/40 and usb on 20.

But don't worry about the thing. Just put it on the air and get some use out of it.

Hi gang,

You should check out my auction on eBay. I'm listing an FT-101ZD with a Shure mike, SP-901P speaker/patch, FC-901 tuner and manuals for all. A service manual is also included for the 101. See it all at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=42053613

Forgive the quality of the photo from my frame grabber. Thanks.

Radio Randy

In an attempt to add insult to injury, Bill also refers to things he bids on as "CRAP". This is interesting in itself. Perhaps he feels that he is doing the seller a favor by taking this "CRAP" off his hands.

In addition, I understand eBay stock just SKYROCKETED in the last few weeks. Not to mention that although Bill suspects they "won't be around long", eBay has been online for 3 years now!

Oh well, I'll probably get flamed for the ridiculous price I end up getting (I hope) for my Yaesu.

3095. BIG list of amateur TUBES F.S. (11/12/98)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-13 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <19981112194945.25991.00000652@ng75.aol.com>
Source record: 94811

Hello, I have the following Amateur radio tubes for sale. All are NOS
in the original box unless stated otherwise. When possible, (some tubes
can only be tested in curcuit) tubes are tested with a Hickok TV-7D/U.
I have a vast amount of tested, miniature tubes for your recievers,
transmitters, test equipment, etc. at very reasonable prices. Also have
a pretty huge stock of all types of NOS tubes, please inquire about things
not appearing on any of my posts. I'm in the midst of learning how to
set up a website, perhaps in this life :o)... Shipping extra, runs only
3.00 and up, whatever the post office charges...insurance is only a buck
or so, depending on the market value for the particular item(s).
The large transmitter tubes have been checked via ohmmeter.
I will only shipped these fully insured.
Of course, i'll guarantee them to work properly, so PLEASE TEST CAREFULLY
IMMEDIATELY apon arrival, and if it doesn't do what you like, just send it
back right away for a prompt refund,(in original,shipped condition) less return

shipping charges. If defective, I'll absorb initial shipping costs.
Thanks,
if interested, drop me a line... 73's
Joe Pratt, Tubecntral@aol.com

Hello, I have the following Western Electric tubes in stock and ready
to go. All are NOS (new old stock) in the original boxes unless stated
otherwise. All are tested on the Hickok TV-7D/U to insure quality.
Where there is a used tube, I've provided the TV-7 readings as follows:
M= minimum acceptable for good tubes
T= this tube's readings.
These are all of the W.E. that I currently have in stock. I also have
a huge inventory of other types of NOS and TV-7 checked tubes. Inquire.
Shipping and optional insurance extra. Thanks, Read on.....
Joe Pratt
Tubecntral@aol.com

M= minimum on TV-7, T= This particular tube's reading

102F "tennis ball" triode, ONE with perfect getter, tests good,

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real

nicely illustrated easy to understand manual, Price 10.00

Thanks for reading, if you have any questions or need to order,
Please respond to my mailbox...

Picking the bones of this old bird continues. The dial glass, main tuning knobs, panel bar and power transformer are gone. The other knobs are left, which are generic to the S38E, 108, 111 and others. S meter is available - and goes on other sets as well IE the 111. Under chassis stuff still available - pots, bandswitch etc. Let me know what you need.

For me it was a 1959 issue of (I think) CQ - I didn't know what any of it meant, but the pictures sure sparked my interest! The cover mentioned Spunik. My parents then bought me one of those "100 Electrical Experiments" kits with a buzzer and bell and a photocell. Then came the ARRL's "How To Become a Radio Amateur" (early 60s edition).

There was also a 1954 edition of some book (something like "Electronics For Boys") written the same year I was born. It referred to the ionosphere as the Heaviside Layer.

Then came the subscription to Electronics Illustrated. Then QST. Then an order to 73 Magazine for all back issues to Issue #2 (Wayne was selling an entire set for $5 per year - I remember the musty odor when they arrived).

|> Thanks: David Jackson, KC6SSF

Hi David,

Your capacitor is simply a two-in-one so you can replace it by two separate capacitors. The voltage rating is for DC, as an electrolytic capacitor would be destroyed by AC (this applies to the usual type).

vy 73,

Wolfgang DJ3TZ

This is the last day for this auction. I'm selling my tried and true 520se with the optional 500hz cw filter installed. Rig is in good cosmetic condition - (some light scratches on the case, face is very good), and excellent operating shape. With manual. Only reason it's leaving is that I just bought a new radio (TS-570D) and wife says if one comes IN, then one goes OUT! (hi, hi). Nice first hf rig, or as a backup. Very fine transmit audio - like most of the tube kenwoods always get great reports on the sound. And the cw filter is great for picking a signal out of the qrm.

So it's on EBAY thru tonight (11/13). Currently at $250. I have a $275 reserve, but have decided to sell for $250 or above plus shipping.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=40493038

Thanks and 73

Because of its high value (price), there are not a lot of people
standing in line to buy one. He may have to post it again until someone
who wants it (and has the $$$ to pay what it is worth) happens to see
the ad.

His price is good for that model!

Yes, you can replace it with two single-section caps. You want DC capacitors - AC caps are used for AC applications like phase shifting reversible AC motors, are NP (non-polarized) and are more expensive.

Note: If this cap went bad, there may be others about ready to do the same because of age. You may want to "recap" the whole supply.

Hello,

I have an early (S/N 174, I think) Drake R-4 receiver that I would like to swap for Heathkit gear. The R-4 is in excellent condition and I have an original manual for the receiver as well. I would like to swap the R-4 for a Heathkit SB-100, SB-101, or SB-102 (with power supply) in excellent, working condition. I would also swap the R-4 with some cash for a SB-301/SB-401 station.

Please reply via e-mail, or feel free to call me at work at (419) 523-5000 during business hours EST.

Thanks & 73,

Tony Schroeder N8SNC

Not trying to be price police or anythig like it. But it seems to me one can buy a real nice DSP unit for the same price. I own all the same equipment and do not find anything special about the filter except the only way to find it is used.

Dan,

You might try building your own. That is what I did many years ago. Worked great and it is not a difficult project. Though it might be possible to find a DS1A, you may look a long time for one. Another possibility would be to get a junk TS-520 and remove the DC brick from it.

To build your own, just get a copy of the schematic from an owner of the original TS-520. The DC supply was part of the rig, not an option. You'll need 2 high current transistors, a couple resistors, a capacitor, a 12 pin Jones plug and a heat sink. Kenwood wanted about $70.00 for the brick when the product was being marketed. I built mine for $15.00 in an evening. Used it for years. In fact, I still have the radio and it still runs just fine on 12 VDC when the need arises.

73,

Wayne, W1KI

Aw, come on now. I kinda enjoy the tirekicking and whining. Like
it used to be back in the Olden Days when we took our stuff to Hamfests
and stood around and told lies.
More seriously, I don't post stuff to e-bay//no good reason except
inertia. I do post to this NG and the BA reflector sites and get
real good results. I know what I've got in something and what I want to
get for it. I've found if you put a reasonable price on decent equipment
it almost always sells in hours. Maybe something rare and/or unusual
with no real established price would be best on an auction network but I
still like the "personal" touch.
Craig

You are absolutely right half of that crap is not worth the money. On ebay
auction you should rember let the buyer beware and stick to hamfest.
Personaly I think the people who jack up the prices stay up at night, who
can sleep knowing they are ripping off their fellow man?

You gentlemen are absolutely entitled to your own opinions. Keep in mind however that the constitution very explicitly protects the right to free speech, and that nobody put a gun to your head to dial up EBAY's website. If EBAY is not your bag, then stick to hamfests and the swap groups. I personally have found prime examples of overpriced trash in all of these venues. Conversely, I have acquired some real bargains through them all as well.

Caveat Emptor, Let the buyer beware, or as P.T. Barnum said "It is morally wrong to leave a sucker in possession of his money" (Or something to that effect)

Not looking to start another "flame war" here, just adding my 2-cents' worth.....

Steve

Estate Sale, The folowing is equipment for sale from the estate of K3GOX-SK
I was excepting bids on the equipment and was swamped with over 100 emails a
day.
I promiss u that all the equipment listed here works and is in good to verry
good
condition. Since their are so many bidders, i have formulated a suggested used
price for
everything. Remember the previous owners request was that when he died was the
funds
from this to go to charity..

From: amfone@concentric.net
Message-ID: <72k7i3dcd1@nnrp1.dejanews.com>
Source record: 94659

HELL AND thanks for reading.
I have a B/W5100 which I am working on...
I am wondering if anyone has exp. repairing this old and nice boatanchore ?
Here is the problem.. the radio was working perfect up to last night.
Now it will not tune up.. there appears to be no high voltage , tubes
check good. But the rig will not load..nor is there any indication that
the pa is getting any high voltage.. I at first suspected the relay but it
appears to be working ok ..the meter indicates the final is not keyed that
is no grid or plate current..The vfo appears to be working but is weak..
I think , that is you can just hear it working in the receiver but not
like in the past where the signal from just the vfo was very strong...

any help much appreciated.

What should I be asking for my Yaesu FT107m and FT107e This is with Digital memory shift at the console and on the mike. 10 meters to 180 meters. For those not familiar the tuning can be linear or digital. Frequencies can be memorized on different bands and be switched for meeting someone when loking for a quiet place or just meeting at a prearanged frequency. The Transiver can be operated either on a 12V battery or 115VAC using the 20A external matching supply with additional external speaker. There are built in adjustable notch and peak filters that cut the QRM. The original price was some where around $1300. Asking $700.

On 1998-11-10 chashugg@earthlink.NET(CharlesHugg) said:
ch Newsgroups: rec.radio.amateur.boatanchors
ch Can someone help me id the possible cause of a strong hum in my
ch R390(not A). It sounds like an AC hum to me. It is most noticable
ch on strong stations. If I run 90 volts into the radeo via a variac,
ch it is not so bad, but as I increased the voltage it starts popping
ch then hums. I don't have a manual yet, but am hoping that someone
ch can help identify the most likely capacitor that may need to be
ch replaced. Also, any ideas on a source for the replacment capacitor.
ch This is a really clean radio, otherwise, and I would like to get it
ch going. It works great on all bands and is very sensitive. I think
ch that if the hum were gone, it would be perfect. It is a Motorola
ch model, late vintage.
ch Thanks for any help,
ch Charlie, K5MBX

Almost sure to be the capacitor which takes audio to the control grid of the output valve, from the anode (plate) of the previous valve. Usually 0.1 uF but if that causes motor-boating, try .01 uF.

If it's not changed it sends the output valve grid positive, = far too high Ia, = overheating, and the smoothing (hum filtering) is no longer adequate. The excessive current also flows in the rectifier so such a fault ought to be corrected a.s.a.p.

These tubes are tested on an AVO Valve Tester for emission and gm before posting, but they are NOT suitable for collectors or audiophiles. Only for constructors. PRICE: Offers around twice the cost of packing and posting.

The BOOKS likewise are good, useable books, NOT suitable for collectors.

Please email me for the lists.

PRICES: Offers welcome around twice the cost of postage (airmail).

Regretfully I've had to stop spending any time testing or packing etc until I'm sure the agreed price is forthcoming.

THESE ARE NOT "COLLECTOR'S ITEMS"

Examples:
BOOKS (Author,Title,Publisher,19--) Agger Pr of Electronics Macmillan 58 Boltz Wireless for Beginners Harrap 33 Camm Everyman's Wireless Book illus Newnes 34 Camm Fifty Tested Wireless Circuits (inc 1 flying spot tv) Newnes pre-war? In an attempt to add insult to injury, Bill also refers to things he bids on as "CRAP". This is interesting in itself. Perhaps he feels that he is doing the seller a favor by taking this "CRAP" off his hands.

In addition, I understand eBay stock just SKYROCKETED in the last few weeks. Not to mention that although Bill suspects they "won't be around long", eBay has been online for 3 years now!

Oh well, I'll probably get flamed for the ridiculous price I end up getting (I hope) for my Yaesu.

Aw, come on now. I kinda enjoy the tirekicking and whining. Like
it used to be back in the Olden Days when we took our stuff to Hamfests
and stood around and told lies.
More seriously, I don't post stuff to e-bay//no good reason except
inertia. I do post to this NG and the BA reflector sites and get
real good results. I know what I've got in something and what I want to
get for it. I've found if you put a reasonable price on decent equipment
it almost always sells in hours. Maybe something rare and/or unusual
with no real established price would be best on an auction network but I
still like the "personal" touch.
Craig

You are absolutely right half of that crap is not worth the money. On ebay
auction you should rember let the buyer beware and stick to hamfest.
Personaly I think the people who jack up the prices stay up at night, who
can sleep knowing they are ripping off their fellow man?

You gentlemen are absolutely entitled to your own opinions. Keep in mind however that the constitution very explicitly protects the right to free speech, and that nobody put a gun to your head to dial up EBAY's website. If EBAY is not your bag, then stick to hamfests and the swap groups. I personally have found prime examples of overpriced trash in all of these venues. Conversely, I have acquired some real bargains through them all as well.

Caveat Emptor, Let the buyer beware, or as P.T. Barnum said "It is morally wrong to leave a sucker in possession of his money" (Or something to that effect)

Not looking to start another "flame war" here, just adding my 2-cents' worth.....

Steve

Jim Cunningham has a Kenwood TS-690S 160-6m for sale. Asking $750.

Also, he needs to trade power supplies.

Swap Heathkit HP-23 power supply or Icom IC-PS20 power supply

FOR a Heathkit SB-1400-4 power supply.

(Would also consider trading the Yaesu supply that matches the FT-200.)

Contact Jim: marijimc@juno.com

Phil:

A lot of times it's paint specks, but a lot of times it's not. I know this because some of my equipment has gathered specks and I havn't painted anything for years. However, where I find specks, I find spider webs above. My conclusion: often it's spider dung masquerading as paint specks. Armed with this knowledge, it should open up a whole new range of possibilities for cleaning up radio cabinets.

Yours for more and cleaner radios, 73.

I have the following Keys for sale:

WWII British key. MKII, PT&EW Dated 1940. Very nice condition, and nice feel to the key. Price: $90

WWII Bendix Radio Corp, key. Type MT-11B. In mint condition. Still has the Inspection tag Dated 5/3/44 attached, as well as the cable and plug. This is a great key. Price: $65

Newer straight key mounted on wood base. key is stamped on bottom made in japan. Not a collectors key, but a good starter key. Price:$5

All prices plus shipping (US mail $3).

Thanks and 73
David

I recently acquired a Viking Challenger chassis.

Most of the power supply parts are missing. The power transformer is shot.
Rejuvenating the set is probably out of the question.

Most of the parts, including variable capacitors, switches, tubes, coils,
meter, etc.
are still intact. The case is in good shape.

Any ideas what I sould do with this puppy? I'm thinking about building a
balanced Z-match
antenna tuner.

Any ideas out there?

HI Joe....no, the TV-7 would not do the job. You'd need a checker
for transmitting tubes, with lots of filament power and 2 kv or so of
plate voltage, with a variable screen supply. There are some like this
out there in the world.....but cant remember who'd have them any
more.

I used to run my DX-60 transmitter at about 20W output by reducing
the drive. Sure made the finals last a long time!

Anthony Wilson wrote:
>
> Can anyone give some general info on the BC-620 radio...

BC-620 Receiver--transmitter, 20-28 MC,
Part of SCR-509 and SCR-510
SCR-509:
Pack radio, 20-28 MC FM, 1 watt, crystal control,
8-foot whip antenna,
manual TM11-605, 1943, voice only, range 5 miles,
2 preset crystal control channels, power requirements
xmitter 1.5vdc .7amp, 90vdc 45ma., 7.5vdc .3amp,
150vdc 45ma. Receiver 1.5vdc .7 amp, 90vdc 25ma.

SCR-510:
Vehicular version using PE-97 or PE-120 power pack,
AN-45 antenna.

I have PE-120 power supplies available.
Electrically good on the inside. Some rust on
the outside but easy to refinish. Cable
needs replacing since the outer insulation
is oxidized. $35 plus shipping from 78728
or will talk trades.

Want: HAL DS-3100ASR Terminal
with or without accessories including
the HAL disk unit.

What do you have?

What condition is it in?

Does it work?

What version of firmware does it have
installed in it (Look at screen on the
'3100 at power-up for the version
number - should probably be 3.x
or 3.xx or some such in the top
left or right hand corner)?

Do you have any manuals for it?

What do you want for it/ them/ the pile
of stuff?

What OTHER HAL stuff do
you have that you'd like to
get rid of?

Where are you located?

Thanks for your time

I have a very nice NC300 with the matching speaker and calibrator. I have completely aligned it and it works very well. I would put it at about an 9 on a scale of 10. I did paint the cabinet but did it with a spray gun and compressor and computer matched the paint. It looks excellent.

I am asking $225 or will consider a trade for something neat.

Source record: 94755

Be aware that a 180 watt transmitter will transmit some trash on frequencies
other than the channel frequency and that some rigs will continue transmitting
that trash at the same level even if the carrier is reduced. The result is
that the 'spurious signals' become a larger percent of the total power.
Another way to state the condition is that the signal will be degraded.

Ebay revolutionized the free market system in our capitalistic society! Isn't this part of what freedom is about ? "Free market"! Who says what an item sells for on a NG or Hamfests is the "market price" ? Well, Ebay and the internet have obviously revolutionized our Radio market! Don't you all think it's time to calculate "Web" pricing into the grand "market" equation ?! I for one certainly do!

Thank You!

BB WOLF

3257. FS: Hallicrafters TO Keyer and Spares

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-15 00:00:00 UTC
From: Brian Harrison <bharrison@earthlink.net>
Message-ID: <72o6m9lgs1@oak.prod.itd.earthlink.net>
Source record: 94415

For Sale:
Hallicrafters TO Keyer, currently in use here in my shack,
good condition (some light scratches on cabinet)
This tube-type keyer will key just about any rig thanks to the
big plug-in (sealed) mercury-wetted relay that is the heart of this keyer.

Also I have three spare mercury wetted relays, and a handful of spare
tubes (mainly 12AU7s, which are used throughout).

The sidetone on this keyer currently doesn't work (I use the sidetone in
my xcvr instead anyway). I believe the culprit is the sidetone potentiometer
having
one side open...).

Will ship everything to you for $45.

thanks and regards,
brian

Last night, I asked Chris:

Chris - I have been asking you questions about the Collins equipment prior to making you a nice offer - but you have not answered my messages.

Now you are saying it is sold!!!!!?????

I thought you were taking offers for the sake of the estate!!! Don't you need mine? When did you stop taking offers?

Al - K8EUR

Then, Chris replied to me:

From: ChrisEMT@aol.com
Message-ID: <20cfdbfc.364e7334@aol.com>
Date: Sun, 15 Nov 1998 01:22:44 EST
Subject: Re: K3GOX-SK ESTATE SALE 10-15-98

when i got a offer no one could touch !!!

sory chris
<<<>>>

I have asked now asked Chris how he knows that "no one could touch" it if he hasn't even heard my offer!

While I was doubtful at first that this was a "scam", it appears that Chris is making terrible judgements for the "estate" that he claims to represent - or....he is doling this stuff out to his friends for some unknown considerations!

I'm sorry I wasted my time and raised my blood pressure over this!

Al - K8EUR

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works..
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501
T217 gr/r27gr/md125agr reciever and transmitter
for 200-399 mc AM military/Faa was at the Lubbock
Faa tower
Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

make any resonable offer to
kevin

3288. Re: Was Ebay ripoff.....What I think about it

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-15 00:00:00 UTC
From: egriffin@ctc.net
Message-ID: <364f3b57.19846864@news>
Source record: 94486

Gentlemen,

I plead guilty to posting my eBay item to this newsgroup. I have received a couple direct emails, of the flame nature, telling me to keep such off the newsgroup.

It was my impression that this cross-posting was hashed over extensively a few months ago. The feeling that I got at that time was this would be generally accepted if the words "auction" or "eBay" were used in the header of the posting. This way those that are not interested in an auction could delete the posting or filter it out.

We have all seen things bidded to excessive amounts on eBay. On the other hand, this thread seems to indicate that I am not the only one that has purchased items at a fair, and sometimes a bargain, price. The impossible to find Yaesu World Clock, I just picked up for 1/2 of what some people would give for it. The first shortwave receiver I ever had was a Hallicrafters 5R-40. I just bought one on eBay for $36.00. Did I pay too much? Perhaps you may think so, but I'm happy. I go to a lot of hamfest, including Dayton for the last five years, and this is the first one I've seen for sale. Don't you think that nostalgia is one reason for some of the higher prices on eBay? Things that we only dreamed of as a kid are often auctioned on eBay. The price gets high due to the fact that there's many "grown up kids" out there who can afford now what they couldn't back then.

Another thing to think about is how are items priced on a newsgroup. I doubt that I am the only one that will do an item search on eBay to see what past auctions have brought. Before eBay came along a guy would just pick a dollar amount and make the posting. Wonder how many times he'd bitch when he saw the same thing at twice the price at the next hamfest? Most everyone wants to buy something dirt cheap and make a bundle if they decide to sell it. Why do some bitch and whine about this? Being able to make a dime on a few items allows me to keep a few things that I really want.

I hate to see an interesting newsgroup get bogged down by a bunch of griping and flaming. Perhaps one of our internet gurus could set up a site for us to vote on whether the newsgroup wants auctions posted or not. My vote would be to allow it as long as "auction" or "eBay" is in the header. Until that vote is taken, I apologize to those that take offense to my eBay posting and will endure the flames. These penny-pinchers should just ignore my upcoming SX-110 and matching speaker. They both look like they just came out of the box..... and they ain't going to be cheap!

73

I'm looking for a good condition Hammarlund Pre-war Super Pro SP-110 or SP-210. The model (variation) with complete Broadcast Band coverage, (I think they covered .54 to 20mc.)
Hopefully, with the original power supply. I would purchase or can offer one (or possibly more) of the following items in trade.

National DC SW-3 with 40M BS & 20M BS coils
Hallicafters SX-23 , exc/working
Hammarlund HQ-120, rack mount with original dust cover.

If any of this sounds interesting and you have a pre-war Super Pro you would like to trade or sell, let me know - e-mail please. Thanks,

Henry Rogers W7BUG

3292. The ebay debate rages on...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-15 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19981115160720.18469.00002459@ng-fi1.aol.com>
Source record: 94490

Just the other night, I saw an auction go off at 22:00 p.s.t. The bid price for the previous 3 days for this item was $20.00. (no it wasn't radio related) I wasn't going to wait until 01:00 e.s.t. to see what I thought would happen, so I checked first thing the next morning and sure as rain, and as usual I saw that at 21:59:29 p.s.t. a sniper came in and upped the bid to $20.50. This is exactly why I don't bid on ebay anymore. I understand about elf'ing my bid and all the other triats of an auction, but I will not tolerate the sniping and watch the professionals who buy lots and then break them up and re-sell them in little pieces for a large markup.
My response to this nonsense is to turn my back on ebay and try the alternatives instead. My luck so far has been very good as the prices that I have paid for the items that I posted wants for have been very reasonable..
Sorry if I have offended any ebay supporters, it's just my opinion.
rgds,
nc183d

Chris, there are more than a few of us who would like to have given you an offer for various pieces of the equipment, but you seem to be running this show your own way. You ignored my inquiries until after the equipment I asked about was "sold". You finally told me you got an offer that "couldn't be beat". There is NO offer that can't be beat if you take enough offers. How many did you get, and what did you sell the KWM-2 for? If you did a good job price-wise for the estate, you should be proud to tell us.

Cut the self-righteous crap!!!

You are not even waiting for good offers, but seem to be parcelling out the equipment as you see fit. Why did you solicit offers? You are not doing what you said you would do! The "estate" should be real proud of you.

Your abuse of this well-intentioned people in this newsgroup will not be forgotten.

SP600JX14 Hammarlund general coverage receiver. Being sold as is. This radio is complete, has good front panel, good clean chassis, and no mods to chassis etc. It runs on all bands, but the BFO is not working. The off on switch is broken and needs replacement. It has been recapped. Rack model. The logging dial in this radio is calibrated in amateur frequencies, which I think is an unusual situation, and beneficial to hams. I dont think its a mod, as it looks just as good as the main dial.

Price is $185.00 plus foam in place packing costs of $20.00 and shipping.

3296. Ebay?

3297. FS: Drake R-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-15 00:00:00 UTC
From: Mike Bennett <jasonb@alaska.net>
Message-ID: <364F4600.3FA8@alaska.net>
Source record: 94495

Hi have a Drake R-4 receiver for sale. This is the original version and the serial no. is 0091, one of the first ones off the line for Drake. Definately a piece of history for Drake collector.

Mechanically it is an 8 plus, all original knobs, cabinet very good condition, face plate has a couple of small scratches and the lettering is very good. The radio does drift and in need of some tlc. Chassis is in very good condition. Price is $120 plus $25 shipping from Alaska to the lower 48.

I have a copy of the manual that goes with the radio.

Thanks

Mike

I wouldn't jump to any conclusions there, Bill. Maybe surviving relatives sold it to the ham who was the best man. Maybe more than one person is handling the estate and Chris might just be the one who is handling the on-line part of it, with someone else selling to locals. I too have falsely accused others of similar things regarding estate sales. I think all of the postings in this and other newsgroups of deals that went sour has everyone a little paranoid. The vast majority of hams are not out to screw their fellow amateurs. Sorry if you feel like I am meddling here, but it is discouraging to see so many amateurs flame one another at a time when we need to stick together to keep from losing our bands to commercial interests.....Mark KB4AEP

I do not feel I've "jumped to any conclusion", Mark; the only conclusion I have made and stand by in this matter is that Chris has not dealt either fairly, properly, and honestly with me, nor apparently with several others here in the newsgroups.

I will be the first to (publicly) apologize if my "conclusions" were either incorrect or unfair, Mark. At this time, however, based upon the e-mail I have received from Chris (which has now become abusive), as well as e-mail messages I've received from others who have had somewhat similar unpleasant experiences with Chris' handling of this estate sale, I do not see a reason to "apologize" for anything. I believe Chris owes several of us here an apology for the manner in which he has dealt with our sincere and fair bids.

I've informed Chris that any further (abusive) e-mail which he sends to me about this matter will be publicly posted here for all to read. All of the messages between myself and Chris have been saved, and are available (via e-mail) to anyone who wishes to request and read for themselves exactly what has taken place. Reading the messages from Chris "speaks for itself".

Just realized that my Multi-Elmac PMR-8 RX has a 265kc IF ... and the Heath
QF-1
Q-Multiplier requires 455. Hmmmm.

Anyone willing to trade for a MFJ 1026 pre-selector? (I'll add $20. cash)

The QF-1 is a beauty and comes with the original manual.

Thanks & 73, DavidC AA1FA E-mail aa1fa@qsl.net or 603-894-1174

Hi Dwight,
Is that 45 watts in 170 out? Just curious what it will give out, with 25 watts in? I am using an IC-271 for SSB on 2 meters. This rig is rated at 25 watts. I am in Oakland, CA and am interested in the amp. One other thing does it incorporate a receiver preamp within the amp circuit?
Thanks for the info.
73,
Jack W6ABC

Chris - I have been asking you questions about the Collins equipment
prior to
making you a nice offer - but you have not answered my messages.

Now you are saying it is sold!!!!!?????

I thought you were taking offers for the sake of the estate!!! Don't
you need
mine? When did you stop taking offers?

Al - K8EUR

Unfortunately, the "K3GOX Silent Key Estate Sale" appears to be a sham.
I've just finished exchanging a series of messages online with "ChrisEMT",
N3SIG, who is supposedly conduction this estate sale, offering equipment he
listed as "for sale to highest bidder", stating that the proceeds will go to
charity, as per the wishes of the silent key.

I offered Chris a fair offer on a piece of gear he listed a few days ago,
and then re-listed this evening (a Johnson Ranger I). First, I asked him
to tell me about the condition of the rig; his reply was that it was in
"good condition". No further explanation. Tonite, I re-read his most
recent message about this estate sale, and placed a firm offer for this rig.
He accepted my offer, and asked me where I was located. I replied with my
location, asking his location. Not 10 minutes after I sent that message
tonite (at 1:30 in the morning!), Chris sent an e-mail reply stating:
"Sorry, I just had a phone call, and the rig has been sold".
Questioning him about this peculiarity, he replied that "the rig was
sold to a "local", who was the best man at the silent key's wedding".
Apparently, Chris has now sold this rig twice...or, he simply is not
a man of his word.

I've saved all of his e-mail messages with this irregularity being
quite clear...and will offer them privately to anyone else here who
is interested in this sham "estate sale". Apparently, from reading
the newsgroup messages here tonite, I'm not the only one who has been
"scammed" by Chris.

Yup! I know, strange request!! Need one set (4 pieces with screws) of the machined, aluminum chassis feet found on the Yaesu 400, 401, 560, or 570 series gear. In addition to your reasonable asking price I will also return a set of correct height, supplied by Yaesu, molded plastic feet & screws for whatever piece of gear you take the aluminum ones off of! I have one piece in my lineup that does not have the metal feet and would like to get all my pieces to match!

>filters??

Collins 618S Airborne HF Transceiver ('50's). 165W? AM/CW rig, big, approx 35 tubes, uses 3 x 6159 in parallel in PA stage. Usually xtal controlled (144 ch) but Stabilized Master Oscillator version also (you need a code book to set it up). Power 28V at around 6A xcv, 30A xmit, 115V 400 Hz ~ 160W. Requires external 416W1 dynamotor supply.

I 've got one up and running (unmodified!) - sure could use a 2 Khz CW filter.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.equipment,rec.radio.amateur.boatanchors

I have for sale 2 complete twt setups <unk if working>
came from older ham getting out of equipment....
they are Alfred model 502 and model 562
I have another that was part of a 2304 station <not selling>
that showed 200mw output on a bird microwave wattmeter.
make resonable offer, they ARE heavy and are listed
from 2-5 gig outputs ranging from 100-220 mw <on test sheet>
N connector in and out.
<these units are complete with power supply and all, plug in and use>

I also have 3 Thompson-CSF Th3543c TWT, that list from 5.925 to 6.435
gig collins part @ 270-0634-010 with test data
5.5 volt
2.5kv anode
1.5kv collector
1.5 milliwatts in for 10 watts out
33 db gain
These were said to work fine on 5 gig ham band
and have reduced gain on 3 gig ham band <around 20db gain>
they have SMA connectors, and NO power supply.

I also have rectifier tubes, and thousands of others. Guitar amp tubes
are probably spoken for already.....
NO sweep tubes

also I have a limited supply of 381 <2c39> tubes

********remove nospam to reply*********
see ya on the bands

I've dropped the reserve altogether and simply placed it at a higher opening bid. There's nothing misleading, nothing fraudulent, just my prerogative to change the opening bid pursuant to eBay's rules. In this manner, I'm not wasting your time, nor mine. All the cards are out and open on the table. If you don't like the terms, don't bid on the item. Thanks for your interest and have a great day!

Funny thing. I knew K3GOX and guess what? He wasn't married. So much for the "best man". Also, I bid on 3 items, one of which was the SX-100. I was told a few days ago that the receiver was sold. Yet, it is still offered for sale.

The other 2 items I bid on, well, I was told that someone else bid higher than me on them. BUT, I was given the opportunity to place bids equal to the highest bidder's (I was told the dollar amount of the so-called bids), and if I matched that amount, I could have the gear. Now, I don't think that's fair to the highest bidder (if one exists).

The highest "bid" on the Century 21 was $125. Now he wants $150.
The highest "bid" on the HQ-129 was $150. Now he wants $100.

Go figure.......

I guess Chris, N3SIG was "mistaken" when he sent me an e-mail last night at 1:30 A.M. telling me "I just had a call from a local who was the silent key's (K3GOX) best man at his wedding, and he bought the rig". Less than 15 minutes after Chris accepted my bid at 1:15 A.M. Hmmmm...how interesting. Just (another) "minor mistake" you made there, Chris. Some might even call it a lie.

> Also, I bid on 3 items, one of which was the SX-100.

Don't think we're going to be able to figure much out of all this, John. I figure Chris, N3SIG, made some "mistakes". I also figure he owes the newsgroups a public apology for his "mistakes". They've apparently been perpetuated upon several of us now. Almost like lies, but let's give him the benefit of the doubt.

Chris,

You must have just been tired at 1:31 A.M. EST last night, when
you wrote and sent the (below) message to me...just 15 minutes
after you accepted my bid for a rig that suddenly went to the
"best man at the silent key's wedding". How's that, Chris, if
K3GOX, the silent key, wasn't married?

Please explain, and help all of us in the newsgroups to understand.

3344. WTB T/R Switch for Drake/Heathkit Seperates

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-16 00:00:00 UTC
From: Greg Englert <englertgl@pad-uky.campus.mci.net>
Message-ID: <72nvhdhgl1@news.campus.mci.net>
Source record: 94428

I would like to fine an electronic T/R switch to use with my old Novice nostalgia rig. I have reassembled my original shack with a Drake 2B Receiver and Heath DX-60 Xmtr with HG-10B VFO. This would complete my station and put me back on the air "like the good ole days (1973). Please e-mail me at :
englertgl@pad-uky.campus.mci.net

Thanks in advance for any and all help.

Greg KY4A

Please add the Emtron 3000DX (Kenwood TL-922 clone) to the list of rare ones. I have been all over and have yet to find more than one Ham who has heard of it and none who has a manual or schematic! :-(

I guess we must both be persistent and someone will hear of our needs and respond!

Thanks for reading.
Kenwood made a real nice reciever the R599D back in the late 70's or early 80's .. My question is, will Kenwood still repair this radio ? If not does anyone know of a place that will repair this fine receiver ?
thanks very much
73 tim

3386. F.S. Drake MN-4C Antenna Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-16 00:00:00 UTC
From: Carter Grabarczyk <k8vt@ameritech.net>
Message-ID: <3650CA90.323FA37E@ameritech.net>
Source record: 94520

I have a Drake MN-4C antenna tuner for sale. Case, front panel and cosmetically wise,
it is pretty good, probably a 7.5 to 8. However, it needs the following items:

2- 200 pf disk ceramic capacitors (Drake has in stock)
1- ceramic rotary switch -S5-marked "Resistive" on front panel (Drake has in stock)
1- plastic shaft coupling (Drake does not have in stock, but can be easily made. Just a 1/2" dia plastic rod about an inch long with a 1/4" hole drilled through and tapped for a couple of set screws. This is how the original was made-not rocket science ;-)

Watt/SWR meter works fine, all other switches fine, front panel, meter glass and case are FB, has all original knobs and includes original manual (NOT photocopy).

Best offer plus shipping/packaging from 48335 (Detroit area).

Thanks,

73/Carter/K8VT

>the internet have obviously revolutionized our Radio market! Don't you
>all think it's time to calculate "Web" pricing into the grand "market"
>equation ?! I for one certainly do!

Geez, I hope that the general pricing of BAs doesn't start following the trend of some of the things on Ebay! I won't be able to afford another radio!... of course, I could sell out and retire early.ha ha...

I don't believe that auction prices in general are necessarily representative of the open market. Many times I've seen things go for way under what they're worth, and, we all have seen things go for way more than they would typically. On Ebay, I've seen two radios of the same model, in similar condition, close on the same day with a significant difference in price between the two. Go figure.

I'm not an Ebay basher, I think that they provide a good service and I've bought several things there without spending rediculous amounts of money, but then I tend to not get caught up in the heat of the auction and typically bid below market value because I assume that the item will need repairs. I do like to browse the photos, especially on the old tube BC sets, where pictures of the different models are unavailable elsewhere. I do have a distaste for some of the basement dealers who hawk their auction items almost daily on the newsgroups, but after the past year or so I recognize their monikers and just don't read their posts.
73,
Steve K8VO

Yes, Terry. He should have, instead, asked for public advice on pricing (because he really doesn't know what it is worth - he's probably "been away from it for a while"), before he took offers.

Then, and only then, should he have ignored us and taken it to eBay!

Your friend,

Al - K8EUR

Source record: 94532

Well I understand it. Could be he had so many offers and well some of my old rigs are kinda heavy. It may have not been worth while to ship them... no matter what the offers are... it might have been just too much so I guess he sold most of it to locals... in which case, the better approach would have been to write the subject header like so to limit the sales area to locals:

Subject: F.S. Bethlehem, Pa ONLY

Well, for awhile it was kinda of foggy till I woke up in a white room as big as you can see. Not what I expected...No windows or doors but there are shelves full of old receivers and transmitters in brand new condition. Hallicrafters, Hammarlunds, Nationals, Heathkits... Just like I remembered them. Thousands of different models and even the manuals right next to them! There's even a few desks all set up for operation on 160 and 80. Hmmm.. even a log book and a stack of QSl cards made out with my call. Now this is Heaven!

Let's try out this ol Ranger I. hmm nothing lights up, no power?.... hmmm same thing with this NC-300... What gives? Oh nothing is plugged in...

Hey wait a minute... there isn't an AC plug... in fact there isn't an AC plug in the whole damn room...

Hey,... you don't suppose.....?

3399. WTB POWER TRANS. FOR HEATH W4M

Source record: 94539

I am selling a complete Drake station consisting of the Drake TR-4CW (non-RIT) transceiver, AC-4Power supply, MS-4 speaker, and original manual. All are in very good condition, and work perfectly. The only problem is that the TR-4 dial needs adjustment. As many of you know, the front ball bearing looses it's pre-load over time and the dial feels loose. It's a pretty easy adjustment - I just don't have the time to do it. Price for the complete set-up is $275., either pick up here in Greenville, SC, or plus shipping.

3409. K3GOX Estate Sale?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-17 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-981117012150Z-349@webmaster.eletrosys.com>
Source record: 94543

I've been keeping a behinds the scene profile since there were several condemnations about my taking an estate that I was handling for someone else to Ebay. I read this thread about this "estate sale" and ask why anyone would do this on this boatanchor group? First he posts, then refuses to answer Email questions and/or bids, now has raised the ire of various boatanchors who would like to buy the equipment but somehow decided that their potential or actual bids were not high enough and sold it to someone else with an "unbeatable price"?? Give me a break, if this was, in fact, a legitimate estate sale, Chris (whoever he is) should have moved it to Ebay, or stuck to his original offer to take offers with his post. Seems like someone who can't make up their mind. If the intent was to stir 'em up, he's doing a good job. At least an Ebay auction is public for all to see and there are rules to be followed. This kind of scenario is at best "the deal of the hour" as the rules seem to be changing with each offer.

Perhaps the naysayers of Ebay will scratch their heads and wonder if a real internet auction is better than this tripe? If not then I sure hope they enjoy this one . . . .

Terry - W5OAS

$200 shipped to cont. U.S.

According to the previous (original) owner it was purchased new and never
used, and there is no visible reason to doubt that.
Comes with original manual, schematic, and special cable.
One minor approx. 1 inch scratch on bottom, original plastic still on front
panel (plastic is yellowed fgrom age and possibley nicateen).
Dusty inside from sitting.
This transverter looks very good and unmonkeyed with, but i have never
fired it up (it get's it's power from the hf rig, which i don't have).

Price is $200 shipped to cont. U.S.

Let me know if you have more questions!

Thanks and 73, Donzil

> hmmm same thing with this NC-300... What gives? Oh nothing is plugged
> in...

> Hey wait a minute... there isn't an AC plug... in fact there isn't an AC
> plug in the whole damn room...

> Hey,... you don't suppose.....?

This is similar to the story of the evil Novice that joined the Silent Keys back in the '50s... He woke up sitting at an operating desk that sported the latest Coolins KW-10 autotune multikilowatt and Coolins 75A-12 inhaler with zero-beat peeler. Problem was, he was a novice and could only use crystal control. He pulls open a drawer and there are hundreds of crystals, all neatly arranged in rows. He checks them out and finds there are NONE in the ham bands.

He then calls "Hey, CB, you down there?"

...Anyway, that's the way I remember the story...

Hello!

I'm looking for information about the market price for an old Stoner SSB-100A transceiver, as I should do an offer to the owner. It is non-working, dirty, has some small scratches but it seems complete and restorable to an 8+. There is no PS. So, how much is this set worth (if anything!)?.

Thanks!

73 JOSE - EB5AGV/EC5AAU

From: "Christopher A. King" <cking4@mail.ford.com>
Message-ID: <3651E43F.85B42C0F@mail.ford.com>
Source record: 94575

Does anyone know what the original colour of the grille cloth
in a Hallicrafters R-46 speaker was? I'm guessing white or some
sort of off-white or cream colour -- the cloth in this one that
I just acquired is brown from deterioration and probably original.
Thanks in advance to anyone who can help...

C.K.

Hello
I would like to send via the internet my 2 cents worth on the 5wpm code test for Low band (HF) use.. I have connected to the FCC website but do not see how to send in my info.. I think the 5wpm code test is not in ham radios best interests.. I see the majority of those sending in comments to the FCC are those tech and no-code techs who want the HF ability , which I feel is human nature , without working for the current 13wpm code test. Of course anyone can learn 13 wpm with a little work!! Also if you know the proper address to send surface mail please advise...
To all hams who have worked hard for the honor to operate on the low bands and earned the 13wpm test.. or 20 wpm test by passing the code.. I suggest you do as I am going to do and file with the FCC supporting the current code requirment for testing..

Well, I've learned my lesson about Ebay. I bid on a (direct quote from description) "Face and controls look great...." and "almost looks new inside...." Valiant I. Guess what? VFO dial ruined by liquified gum rubber running down dial, VFO pointer welded to dial, all knob white inserts surgically removed, surface corrosion, inside all steel parts fully rusted, and all the cabinet hardware (save 2 scews) missing... ad infinitum. Reply (after 1 1/2 weeks and negative feedback?) "Well, what can you expect, I live on the Gulf coast!" Thanks but no thanks. Cheats and liars I can do without!

I am in full agreement! I got my novice license in 1958 and then my general class that same year - at age 15. It wasn't until 1992 that I upgraded to Extra. The code requirement separates the wannabees from those who take the hobby seriously. It is a fundamental discipline that we all have in common. If the code requirement is dropped, the ham bands will become populated by a new breed of CBers. Nothing good comes easy or without effort!

For Trade:
Kenwood TS-530S digital HF transceiver.
160-10 meters including WARC bands.
I have original owners manual and boxes.
In really nice condition working perfect
on all bands. No scratches on front panel
except a few small ones on the plexiglass.
(You can see through those).

Would like to trade for a excellent condition
Drake B-line. (R4-B, T4X-B, MS4, AC-4)
Must be working perfect with all 10M crystals.
Must included manuals.

email me (Mark) at: crslex@iglou.com

Thanks.....KB4AEP

Several weeks ago I tried to confirm my subscription to the henry reflector at qth.net and kept getting rejected. I finally e-mailed W7RF who runs the relector to get added. I am trying to subscribe to the heath reflector and again my confirmation to majordome@qth.net keeps getting rejected. I sent the problem to my ISP mindspring and they get the same rejection. qth.net is rejecting mindspring.com.
If anyone knows who to get to the sysop at qth.net please tell them.

Once on the henry reflector I am Ok. But you have to get past the majordomo.

I would like to be on the heath reflector. If I get no response I guess I will just have to delete qth.net from my bookmarks. Too bad as they seem to control most of the ham reflectors.....

Source record: 94588

After all is said and done about eBay, the reason I'll not be buying there again is simple. Most sellers I dealt with didn't care enough to pack their items so they survived shipment. Out of about one dozen items purchased via eBay, more than half of them were damaged or destroyed in shipping due to the seller inadequately packing the item. All were insured, but the items were irreplaceable relics of the boatanchor age.

Out of numerous items purchased from notes on this and other news groups, all arrived in fine shape.

Source record: 94591

Hi Tim,

Check your 6146 plate xformer AC volts secondary CAREFULLY at the input
to the high voltage rectifier.

Next check output DC volts from High voltage rectifier CAREFULLY.

Do the same to with the low voltage rectifier (supplies DC to all except
the 6146's)

Its been 40 years since I have used this rig but this is a starting
point for power supply tracing.

I suspect that the low voltage rectifier circuit is not delivering to
bias the 6146's as well as not supplying DC to the driver plate.

Hope this is of some help.

Hi gang,

I've included my Icom 22S in my auctions on eBay. Check it out.

Also, don't forget my Yaesu FT-101ZD (FT-901 clone) station with speaker/phone patch, tuner and Shure microphone. All you need is a piece of wire and a ground and you're on the air! This station is COMPLETE with manuals for all but the mike.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks.

Radio Randy

Yep, I guess I'm a sniper, too. I did a search on eBay (late at night to avoid crowds on my ISP) and saw an auction that was ending in just a few minutes. I bid, bid again and finally got the high bid.

Ok, so most eBay users are on the East Coast and go to bed about my dinner time...all's fair in love and eBay! I've lost a NUMBER of auctions on eBay. Know what, I moved on. I STILL don't have that TEC 9 I've been bidding on for over a month now. Maybe one of these days...

Hello All:

I am in need of a manual (original or GOOD copy) for a Dentron DTR-1200L. Information on this amplifier seems to be a bit elusive.

Also, I am wondering if anyone knows of a 10/12 meter modification for this amplifier.

If you think you can help, please E-mail directly.

Thank you,

Message-ID: <36530F06.B28@ix.netcom.com>
Source record: 94364

I've been listening to all the HF USB traffic
on 11175 KC while our forces rattle their sabers
at the Quaq from Iraq. It's pretty neat to hear
"Sky King, Sky King, do not answer..." again.
Better listen while you can, folks.
HF phone links are going the way of CW.
I haven't heard anything on the old nets
like Quebec (6761) so maybe this is what
they have left.

All this advanced, juiced-up and mega-speed
digital-networked super encrypted comm systems and a few
flecks of comet dust make them warm-up the R-390s.
Gotta turn them sats away from the sand storm.
The total sat bandwidth available is probably quite
limited right now. I'm guessing the routine traffic
is going HF while the sats take only the critical and
extra-secure stuff.

I'm reminded of an article in a technical journal
I read last year. Seems there was this big conference.
With the change from simple, analog RF systems which served
customers well to interlinked, digital-encoded, multi-phase-
delayed multi-site simulcasted RF had come something else--
wide band noise. All the assurances from high-powered
engineering labs had not prevented the laws of physics
from creating thousands and thousands of low-level mixing products.
Some repeater sites had become nearly unusable due to a
huge increase in noise floor and whopping intermod problems.

What to do? Most of the conference was devoted to
even more complicated devices that will attempt
to communicate through and around the noise.
We old techs know that chopping the signal up
and attempting to sync it in even more complicated
ways is only going to make the problem worse in the long run.
Don't tell the young engineers-- they'll just roll their
eyes and keep believing their professors.
The house of cards will fall in its own good time.

At the Test Site in Nevada, we used simple analog systems for
many years with great success. One dark day, some devil
whispered in the ear of someone with enough "juice" to convince
the grand poo-bahs that we needed to move into the "20th century."
We were forced to scrap our successful, reliable analog systems

for digital, mulit-site simulcast systems.

Years of time, thousands of man-hours of labor and millions
of tax-payer dollars expended--
and this "modern" system is about as reliable and useful
as a system of semaphore-flag wavers. We traded a system
with a dozen failure modes for a system with a hundred-
dozen failure modes. The results were predictable.

The greatest fictional character ever for someone with
solder-flux flowing in their veins has to be
that legendary problem-solver,
Chief-Engineer Montgomery Scott of Star Trek.
He spoke a bit of wisdom that should be stencilled
on the wall of every engineering department:

"The more complicated they make the plumbing,
the easier it is to stop-up the drain."

Welcome back OT. The craft is something that you never lose. My OM was
a professional CW op for 30 years, and had been a ham in the early spark
days. He left the biz and went on to other things not quite so full of
travel, and 20 years later decided to take up ham radio again. When he
went to take the test at the FCC office, it all flowed again like water
at the 20wpm test speed. It really is something that once learned,
you never lose. It only gets a tad rusty.

> I must agree that the idea of a CW contest does scare me a little. I did make

> come.

We all have been a bit gunshy on the ol' sendin' iron, after a dry spell.
It comes back very quickly. Upband, things were pretty good, and you could
hear the fellas poking along at 15wpm doin' jus' fine. Most of the game
is jumpin' in with both hands flyin' and making it work, the old fashioned
way. So what if you blow one or two....you pick up many more on the fly.

> I think for the most part, CW operators will put up with slow CW stations
> knowing that that is better than no new CW stations. If all CW stations were
> fast then you have no new comers and by that CW will die.

Any real CW operator will 1) always come back at the QRQ of the other
station, and 2) be able to walk the key at whatever pace and gait will
get the message across, regardless of the pileup or QRM/QRN. Sadly,
of late, many the computer CWists seem to have lost that skill in the
heat of the fracas, but many of the keyer ops can handle the QRS properly.
Also, if you are a good CWist, in the heat of a pileup in a contest, a
dash of swing on the sendin' iron has always gotten me through, unless
the competing stations were 100 over 9 on the linear scale. It has the
``standout character'' that always reels the other end in.

Good luck Allen, and fer sure, jus' grapples ye up yer tin cans atops
yer noggin, an' a'readys ye up yer sendin' iron at the fore.....

> Allen Cutts
> N4OZI

Contests are just one aspect of amateur radio. Some folks take to
them like a duck to water, and some don't. Not everyone needs to.
Not everyone should.

Chewing on that ol' ham rag is one of the very traditional aspects
of the game. For most, that is all that is wanted. Nothing can
be finer than the yarns that are spun (and the ``fish that got away''
sized stories) on the average ragchew. You meet a lot of good
folks that way, and can learn a lot of history and practicum on the
way. One needs to get a little beyond the absolute entry level to
get into the conversational flow on CW, perhaps, but even at the
lengthy entry level 5wpm gait, hitting that first 30 minute or hour
long QSO is a milestone.

Some folks contest everything that they can get up to the key with.
They are, perhaps, a bit dedicated to that aspect. That is fine.
Others, like me, do an occasional 'test to keep the fingers nimble,
and the ears tuned. One has to admit that a fiery 'test or two will,
indeed, stoke the fires of a slightly rusty pair o' earbones, and
shaky fingers.

I find that of all the 'test sort of things, that ancient and venerable
Field Day fracas is probably the best of them all. It serves several
noteworthy functions. First, it allows one to develop practicum in
useful portable/emergency skills (although I sometimes wonder when
the air-conditioned RV's roll up....too easy!....(:+}}...). Second,
it is a great way to introduce new hams to a lot of practicum, in
one packaged deal. Third, it can be a good weekend in the boonies.

A real challenge can be had on the 160M CW 'test. That really will
make an op fine tune the ears and the antennae, for optimal results.
Also, that contest can be done with really dinosaurian equipment,

whereas some of the others really are stuck in computerized operation.

Sometimes there are really wierd 'tests that have a rather limited, yet devoted, following. For example, the Antique Wireless Association has a yearly antique CW contest using classic 1929 style amateur gear. That is coming up next weekend or the weekend after on a narrow slice of the 80M band down below 1AW's bcsts. Those are some really funky, yet really historical signals, that you won't hear but few times in a lifetime. Sadly, one of the premier ops with his ringing primary keying note went SK and won't be there anymore (Bruce Kelley/2AN). But, that kind of contest can be an interesting way to meet people, and learn lots of things historical in nature and not the usual 2m rubber duckie fare kind of thing.

Although contesters can tend to be real diehards, and somewhat stuck in that buzz/buzz quick 10 second round trip QSO, sometimes the various peripheral aspects of a particular contest can be rather enjoyable and rewarding. It basically boils down to what you might want to try, and if it works, fine, ... if it doesn't fine, too.

Good Luck, all reading the thread....

Source record: 94369

Seeking info on a CFT 46154B receiver. Navy Dept of Ships Serial # 260.

RX covers 15 to 600 kilohertz in 4 bands. It's in quite good shape (about a six on a scale of ten). Is electrically complete except for a heavy-handed repair to a front panel mounted audio switch, which I fixed and got audio output. Is full of 6SK7 type octal tubes. Has external power and various leads connector on back panel. This one is Navy Grey in colour but I've seen pictures of it in black also.

Can any one suggest a source for a circuit diagram and handbook/manual? I'd love to get it back in shape.

Any suggestions would be much appreciated.

My guess is that unit is a leftover from one of the US bases here in Newfoundland, Canada, which are now closed. eg. Pepperall (St.John's), Harmon (Stephenville), Gander (central Newfoundland) or possibly Argentia (Near where the Atlantic Charter was signed by Roosevelt and Churchill in Placentia Bay Newfoundland). Receiver dates from the Roosevelt era (1940s)
.
Regards. Terry S, Torbay, Newfoundland, Canada.

PS. A few miles from where my two finger typing is tapping this out, Marconi received the first Trans Atlantic wireless message in 1901. I guess that 'sparked' a lot of interest in radio. (Pun intended!)

> Cheats and liars I can do without!

You can't ascribe an experience such as this exclusively to eBay. It could happen as a result of any such sales transaction that happens between two remote locations, where it's not possible to see the item in person.

This week I received a Hallicrafters R-46 speaker through the USPS that I won at auction. The seller packed it extremely well and it survived the trip with nary a scratch. He described the speaker accurately and I got exacly what I expected. There was no photograph in the ad (in fact, I had absolutely idea what an R-46 even looked like until it showed up on my doorstep... all that I had to go on was the word of several individuals that it was the match for the SX-71 I needed a speaker for)... but I bought a National speaker from the same seller a few months ago, and that one had already met expectations so I knew I could trust him.

On the other hand, a Panasonic RF-2900 that I bought via a advertisement posted to Usenet a couple of years ago, and not via auction, was a disaster. I was thoroughly lied to about the operating condition of the radio: the MW band barely detected local stations above the noise floor, and a switch (that was proprietary to the radio's cabinet design but no longer available from Panasonic) was broken internally, disabling functions of the radio. I sent the receiver back to the seller, but the package was refused with some words (on both sides) that don't bear repeating here. I ended up doing what I could to repair the radio and selling it at a loss, just to recover something.

Granted -- we will all probably see more of this sort of thing happen now via eBay, but only because it did not exist in the past, and because it will probably end up becoming the nation's classified advertisement of choice (if it has not already). And a lot of people selling stuff who have no experience with shipping will simply be clueless about how to do it properly, and some people will lie about the condition of goods as well. About all folks who choose to use eBay can do in return is to

make certain that bad experiences get documented through the feedback process, such that risky sellers can only get away with a swindle or a bad shipping job once and avoided thereafter.

You pays your money; you takes your chances...

C.K.

In article <72njj6lcn1@autumn.news.rcn.net>, HITECH@EROLS.COM says...
>
>If you do not agree with ebay do like me and boycott them who says
>we have to buy equipment there? Hamfest on bust is my motto.!!!!!!

You're absolutely right. If you don't like eBay, don't use it!
Like the old saying goes... "Live and let live." Personally, I
do like it and use for both selling and buying, but I can easily
see why many people don't care for it. Those who don't like it
should boycott it, and those who do like it are free to use it.
Hamfests are a lot of fun, too, and I don't think we need to
worry about eBay or the internet killing them. There is nothing
like seeing the gear in person before you buy it. I've found
that the sellers at hamfests are often lying about their gear's
condition, much as many eBay users do, but at the hamfests, we
have an advantage... we can see it in their eyes when they are
lying to us.

Long live hamfests, rec.radio.swap, and eBay... all have their
place in the hobby!

Nice job OM! I hope to someday soon put together a CW transmitter myself.

This does not tell us much unless we have the cross reference index handy. Look for a model number below that info something like:

Part of Radio Receiving Set Rxx-x

where Rxx might be RBB RAK RHG, etc., and the -x would be the series number -1, -2..... etc.

From that we can probably classify what it is and what manual you need.

With 6SK7's it could be an RBA, maybe, or one of the National clones, or even something like one of the Hammarlund clones. It should be a pretty fair LF receiver, and maybe good for the last hurrah on 600M this winter.

Good Luck...

see both at
http://www.geocities.com/Colosseum/Midfield/5934/sbe.html

for sale $300 shipped for both

1. sbe 34 ssb hf transceiver in good condition and works very well.
cover 80 thru 15 meters. tube fianl and driver. 110 vac or 12 vdc use.
very compact. front panel has scrapes on lower right. one non-original
knob. case needs paint job as it has been painted ulgy silver (yuck !).
with manual copy. no mic. has dirty vc and need minor alignment
on rit/offset . $100

2. sbe sb2-la linear amplifier in very good condition. works great !
with full power out (approx 600 pep with 60w drive). uses (6) 6lq6
tubes and they are 100%. case has been repainted black with
some chips and scratches. front is in very good condition and
is complete. covers 80 thru 15 meters. with power cord. no docs.
has some minor rust spots on chassis and transformer top.
very compact $200

for sale $300 shipped for both

see both at
http://www.geocities.com/Colosseum/Midfield/5934/sbe.html

plus ups

thanks 73 tom

I am told by a friend that her late husband had a Brown Key. She describes it as: 2 paddles on one side and a key on the other. Model #CTL-B.

Anyone know where to get info on this or if it has any value for her?

Thanks

Hi Richie,
I've had good and bad experiences both ways. People need to use a
little common sense when shipping, something many could use a lesson in. I
wonder if it's because they got their money up front that they don't care
what kind of shape the stuff arrives in?
My worst experience so far was with a rig I bought from this newsgroup,
a rather heavy BA. It was very poorly packed, and arrived with a large dent
in the cabinet, broken controls, dial glass, etc. I can't fault UPS, there
was simply no way this thing would survive a trip halfway across the country
as packaged. To make matters worse, the seller assured me that the rig was
operational, yet upon receipt, 3 crystals were missing rendering the rig
inoperative. I have been assured by the seller that we can mitigate the
damages (I asked only to be reimbursed for the cost of the crystals, $20.)
That was over a month ago, and I still haven't heard from him.
I'm not saying this to elicit sympathy, merely to point out that there
are bad eggs amongst the newsgroup subscribers as well as probably
everywhere else that people go to buy and sell.
73,
Steve K8VO

3486. WTB: Manual or info on R-1451A/WLR-6

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-18 00:00:00 UTC
From: kb0upl@aol.com

Source record: 94382

I am looking for a manual (copy OK) or any information on a R-1451A / WLR-6 radio receiver. The set is made by Sylvania for the US Navy. It covers 500kc-32mc.
The set has a nixie tube readout for the frequency.
I just got this set and I would like to get it working. I would also be interisted in another R-1451A for parts or a working set.

Thanks, John Richardson kb0upl

You are absolutely correct! However, one naturally has to be
responsive to one's own experience(s). Given my experience, I choose
not to participate. Each person has to make their own determination.

I've seen this in the USPS bulkmail centers. Entirely automated systems.
Packages are shot onto trays by sortation machines, trays run on overhead
tracks until "dumped" down for another ride down a metal slide for that zip
code.
During holiday season, some UPS supervisors have been known to run packages
through building into trailer, and have the trailer run around to the
receiving side.
This doubles the package count, and makes them look super efficient. Been
there,
seen it.

Perhaps your band switch is dirty. Does it do this on all bands? There is also a switch on the left side toward the rear at the bottom so that you can use the rig with a separate receiver. Make sure that it is in the right position (tcvr) to use the receiver in the rig. Switch it back and forth a couple of times to see if that helps anything. If that doesn't work try wiggling all the tubes and make sure they are firmly seated in their sockets. Good luck. --- Steve KK9ZZ

Source record: 94397

For nostalgia's sake only ('cause they weren't really very good receivers but it was the first real receiver I had in 1964), I'm looking for one of these. This radio was an S-118 in a walnut case. Mine actually said "S-118" on it, but the collectors guides all call it the "WR-1500". If you have one of these, please get in touch with me- maybe we can make a deal. Thanks.

This is not an advertisement!

We have been running a contest at http://www.solder-it.com called QSLs on the web where digitized versions of QSL cards are posted each month for voting. The card getting the most votes every other month receives a free Deluxe Micro-Jet Torch.

You don't have to visit the site to take part and if you really dont want to see the other stuff at solder-it.com but want to view the cards, just go directly to http://www.solder-it.com/qsl.htm

Just send your QSL card (or any ham radio related picture) along with your permission to post it written on the back and your e-mail address to:

QSLs On The Web
Box 20100
Cleveland, OH 44120-0100

You can either view your QSL and vote, or when notified that it is posted, vote at: votes@solder-it.com. Of course you should get your friends to vote also. Only one vote per e-mail address permitted. We do not use your e-mail address for ANYTHING other than to notify you of posting and hopefully winning.

Thanks, good luck.

Fred, K8PP

3508. Re: WTB: 4H-4C tube for HRO-60

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-18 00:00:00 UTC
From: ed_engelken@my-dejanews.com
Message-ID: <72t7du$s4i$1@nnrp1.dejanews.com>
Source record: 94597

Hi Folks;

For the record, here is what National says on page 24 of the HRO-60 Manual:

"In the event of failure of the 4H-4 current regulator tube the receiver may be restored to operating condition by plugging a 6V6 tube into the 4H-4 socket. This device should be considered an emergency measure only since the current regulator tube is necessary to insure the excellent frequency stability of the HRO-60."

I have been using a 6V6 in my HRO-60 for about 10 years now and it seems to be very stable without the current regulator. The 4H-4 (and the later version 4H-4C) are very scarce today and sell for "big bucks" and IMO are not necessary. Just plug in a 6V6 and be happy.

Best Regards,

Ed

For Sale:

Clegg 22'er 2 meter AM transceiver.
Complete with manual, and Astatic D-104 (chrome-plated) microphone,
with Astatic "G" (push-to-talk) chrome-plated stand.

This rig is a real "creampuff", in absolutely perfect condition throughout.
Appearance is truly "as-new, museum quality". Together with the D-104 and
"G" stand, this package makes a fine addition to any boatanchor collector's
shack. Price for the package (will not split-up) is $135 plus shipping,
payable by U.S. Postal Money Order only. This one's really too nice to miss!

Source record: 94602

Richie,

I agree. Most people do not realize the violent handling that these UPS, Fed Ex and Parcel Post packages receive. These darn boxes ride down automated conveyors and get mechanically sorted, sometimes tumbling down a sorting ramp. I recently had a discussion with a major shipping account exec. bragging to me about how many miles-per-hour these packages traveled on the sorting line! Nobody gives a hoot about what is inside the box. Anybody shipping fragile electronic equipment in anything other than the original packaging should remember this.

A good rule of thumb (strictly my own) to use is to imagine your package either being dropped from a height of 2 feet or tumbling down a 30 degree incline 2 or 3 times.

For example, I sold a portable scanner on ebay recently. Now this is a relatively light item with little chance of damage, but I really went overboard in my packaging just to ensure that nothing would happen.

I packed it carefully in the original box and then bubble wrapped that box. I then packed that bubble wrapped package in another box with 2 in of Styrofoam peanuts all around.. I was about to send it along on its way when I noticed that the outer box was crushed slightly on the corners.....this is an invitation to trouble. Never use a box that shows any evidence of collapse. Call it overly cautious, but I then repackaged that whole box in another box filled with another 2 in of styrofoam peanuts all around. The box was sealed with 3 in wide fiber re-inforced box tape.

Fortunately for me (and the buyer), I have access to packaging materials and supplies where I work.

As a side note.... most of these "professional" shipping outfits like Mailboxes Etc. do not really do a good job of handling electronic equipment like boatanchors. A few wraps of bubble wrap is not good enough. That is what they will usually do. Heck, a medium weight receiver of 40 lbs or so should have at least 3 in. of bubble wrap all around and then be packed with another 3 in of styrofoam peanuts all around that. Finally, the box should be at least a 200 lb test type and preferably 275 lb test.

Regards, Alan

> that at 21:59:29 p.s.t. a sniper came in and upped the bid to $20.50. This is
> exactly why I don't bid on ebay anymore.

About your only defense is to protect your bid by increasing the maximum to the highest price that you're willing to pay for the item, if you are still top bidder and the time is winding to a close. This way, someone coming in at the last minute with 50 cents more will only add 50 cents to your cost and will not win the auction. If they cut it too close to the last tick on the clock, they won't get another chance to bid. If they come in above your maximum, they'll win, but the price will be more than what you wanted to pay for it anyway. Increasing your maximum will not change the bid price if you are the high bidder at that moment (but will add a tick to the number of bids placed).

I've resorted to "sniping" on occasion, and have been on the receiving end of it as well. It all boils down to how much you're willing to pay to have something, and whether that amount is higher than the next guy's limit.

Hi Craig.
I bought my manual (a copy) from Ed Matsuda, P.O. Box 390613, San Diego Ca.
92148 , Phone #619-479-02215 fax 619-479-1670.
The price for the copy was $45.00 plus postage.
It is a very thick manual about 1-inch
thick with alot of foldouts.
well worth the $45.00 if you have to fix it.
He travels around to the southern california swap meets and sells the manuals.
I don't know were you live but I have a friend who repaired them
professionally. He lives in the San Fernando Valley just north of Los Angeles.
His Name is Stuart and his phone number is 818-8879144. His repair rates are
very reasonably.
Hope you find your manual.
Mike Tyler, K6STU.

You might check the voltage regulatory circuit. Is the VR tube glowing? If not, and the tube checks out OK, you might look at the associated resistor. I had this problem with a 5100-B, replaced the resistor, and it started right up.

In any case, it sounds like a power supply problem. The rig has two power supplies: A high voltage supply for the finals and modulators and a low voltage supply for the rest of the rig. The problem sounds like it's in the high voltage supply.

>Hello! What is the preferred chemical/method for cleaning the contacts
>on the rotary switches in old boatanchors?

Depends on whom you are talking too! Once upon a time, you could get freon TF, it was great. Wissh and Shield were good, but are off the market now.

If you can remove the switch, an ultrasonic cleaner is good. This is impractical for most instances, so you're stuck with sprays.

I generally use a spray flux remover for the first step. It also removes old grease from the works. The only danger is that it will stain most plastics and remove decals from face-plates, so be careful with the overspray and drainage. The second step is follow up with a "lube-cleaner" GC makes one called Jif-Action which I have found does an excellent job.

Finally, you may have to take a dental pick and tighten the stationary contacts.

Anyway, works for me!

Shew

For mild cases of contamination I use Caig
"Deoxit" spray. For heavily oxided contacts, I use a pencil type ink erasor to
remove the black. Blow away the dust and then use "Deoxit". The "Deoxit" also
works wonders on old noisey potentiometers. W1PNH

Not exactly a BA radio, but for you rack mount mil guys, this is
kind of neat. MX1058/U "desk unit" for 19" rack mounting--cool chromed
shelf pulls out to work on. About 4" tall, OD frame, about 18" deep.
Heavy duty gadget, you could stand on this thing! Heavy $50 + ship

3551. Need source for Kenwood black, plastic fastners

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-19 00:00:00 UTC
From: aci6@aol.com
Message-ID: <19981119140932.16646.00000114@ng-fr1.aol.com>
Source record: 94240

I am trying to locate a source for the plastic fastners that Kenwood used on the TS-520, etc to secure the small, metal doors that provided access to the VOX, bias, etc controls. Icom also used these on the IC-251/451/551 and possibly other models.

These consisted of two parts - a body portion that fit into a quarter inch hole. This part had 4 'fingers' which were expanded to secure the door, etc when the other part, a small, plastic plug resembling an unthreaded screw, was pushed into the body of the fastner. All pieces were black plastic and over time some of the 'fingers' tended break off making the fastner much less reliable!!

I have some of the "less reliable" ones and wish to obtain several replacements.

If you know of a source for these, please reply via email. I will be happy to post my findings here as I doubt I am the only one in need of these parts. I have checked the Kenwood parts locations and did not find them listed there.

Regards,

Bill

I've seen something like this in the miscellaneous fasteners section of a
local auto supply store. Sometimes a similar type of fastener is used to
attach plastic interior panels in a car (my own car uses a couple of them
on the console). The store had them in a few sizes, perhaps none are the
correct one for your radio, but I just thought I'd mention it anyway.

I have aquired a I-177-B tube tester. It works fine (or at least it appears to be). It came with some good documentation, but the papers are dated War Department, 3 August 1944. Does anybody out there have tube settings info (or any other documentation)for this tester that are a bit more recent? This unit came originally with a tube socket adapter, kit MX-949/U . Do you have one lying around that needs a new home (asking too much? Probably).
Thanks!
Marco

From: thompson@mindspring.com
Message-ID: <732bd3$t44$1@camel15.mindspring.com>
Source record: 94251

I got back nearly 15 replies from others who had a problem confirming their subscription to one of the old gear reflectors at qth.net.

Seems the "filter" is not working right at majordomo@qth.net and rejecting the confirmation message. I am on the Henty reflector and W7RF (Dan) said he was relying the problem to qth.net sysop K3TKJ.

Stay tuned we may get this fixed yet.

>
> Thanks for the help,
>
> Dave Abell, WH6OL

Dave,
I used an HP-23 with a KWM-2 a few years back. The '23 needs some modifications. I'm sure there are other ways to do it; this worked for me.
Bias needs to be made adjustable; Heath made the adjustment in the rig, Collins makes the adjustment on the power supply. I used a 2.2K 2 W resistor off of the'23's R8. Connected in series with this was a 5K pot. The arm of the pot was bias output, and the other end of the pot's resistor had a 5K 5W resistor on it to ground. This gave me a bias swing of -45 to -90 volts.

The cable from the '23 also must be changed. These are the pin connections:

Heath HP-23 Collins KWM-2
Pin # 1.....bias.....Pin # 4
2.....fil common.....3, 10
3.....l.v.....1

4.....h.v.....2

5 not connected
6.....12 v.....11

7.....ground.....3,
10
8 not connected

9.....ac.....5
10.....ac common.....7
11 not connected.

Run the HP-23's low voltage on the 300 V. setting. and use a 30 Ohm 25 W. resistor in series.

Again, this worked for me; others may have some more suggestions.
Good Luck! 73 Ron WA2EIO

Hello,
In Drake TR-4, there is a lamp connected in series with the antenna terminal. If this lamp is open, you will have either zero or poor sensitivity. Just open the bottom cover and unplug the lamp around the antenna terminal and checl it with VOM.

Good luck to you.

>that HAMed it.

Keith, Try the following for schematic:

http://www.telalink.net/~badger/millist/mi.html

They have TONS of mil info. I just bought an old copy of vol1 of the surplus conversion manual. Send me your snail mail address, and I'll copy the applicable pages for you.

I have a 348 that someone modified by adding an S-meter. Too bad, they're really worth more nowadays in original mil condition....

Gimme a break.... I spent the greatest share of my adult life planning and executing communication plans for large USN, JANA, and NATO operations and exercises. The communications capabilities which include equipment like an old clunker R-390 wouldn't support the communications requirements of a harbor tug in Fargo, ND.

Your friend from the boatanchor group is out to lunch.

Hans

Surprise, surprise! <g>
Seems that there have been increasing numbers of "sellers" who advertise items in the "rec.radio" newsgroups as "For Sale", when indeed all they're doing is "pricing" their items for auction on eBay. This wastes everybody's time here; persons make offers to buy (which are sometimes accepted), then the "seller" turns around and says "sorry"....taking it to eBay.

For those who intend to do this all along, why not simply ask the group here what their item is worth, rather than post a "fake" for sale ad here, with no sincere intention of really selling to anyone through the newsgroups?

No...Not for Budweiser... this is a sturdy Bud Cabinet for BA gear, a steel cabinet with black wrinkle finish and a top lid with a nickel plated pull ring. The cabinet has a chrome strip on the top and bottom of the front opening. Decent shape with no dings or dents. Front opening is 8 1/2" high X 19" wide with louvered sides and access along the rear bottom of the cabinet. This is the perfect cabinet for your BA project or gear. Asking $40.00 or best offer. Buyer pays shipping.

What does it say on the various plates around the back of the set?.

Also when you look at the box behind the megacycles knob does it have a
load of cans on top or just a small farm of trim screws sticking up.

Well, I spent most of *my* adult life cleaning-up the
silly, unworkable messes made by communications
planners in those type settings. You guys still got
the glory once we fixed your foul-ups, so you owe us one.

Funny... we fought and won two world wars,
successfully completed the first decade or our space program,
maintained reliable global maritime and aeronautical
comm and safety systems
and carried-on the communications needs of our entire
planet up to the 70s with- as you say-
> "communications capabilities which include equipment like an
> old clunker R-390...."

That must be one hell of a tugboat there in Fargo.

I guess I have to explain even the simplest points
to some people...

There's no doubt that new techniques have improved
communications both in convienience and through-put.
But the blind acceptance of anything "new" as "better"
and anything "old" as "useless" is wrong-headed
and detrimental. I wrote about the case of destroying
a very successful communications system simply because
it was "old" and replacing it with a
nearly useless system just because it was "new."
You might want to read about the miserable, embarassing
failure of some of that "modern" communications equipment
in Desert Storm.

Many engineers need to be more pragmatic--
they should remember they are there to solve
problems, not create new ones by showing
how "smart" they are.
There is no need to invent new and patentable

technology when all one need do is light a room.

Lowband/6 meter equipment for sale:

RCA Series 1000 mobile radio, model CMFM7MMRNC. 100 watts, presently on 39.xxMHz. Complete system with 4 frequency scanning control head & bracket, speaker, mic, mounting tray, and control/power cable. Has optional noise blanker option. Also includes complete, original RCA 700/1000 series lowband service manual
set in three ring binder. Clean, complete, working when pulled a couple years ago. $75.

RCA 'Supercarfone' mobile, model CMFA50N2TT. 50 watts, 45-54MHz split, presently on 47.98. Complete system with 4 frequency 'integrated' control head with mtg bracket, speaker with mtg bracket, mic, mic hangup box, mounting tray, control and power cables. Also includes complete, original RCA Supercarfone/Superfleetfone lowband service manual set. Radio is very clean, head and cables complete, but a little dirty and worn. Working when pulled a couple years ago. $60.

Both for $115.

Equipment is in southern NH; I would be glad to show it if you're in the area. Prices plus shipping. Check in advance or COD (at cost) are both fine.

Source record: 94221

For Sale:
Central Electronics 20 A Multiphase Exciter SN#7072, circa 1954, very nice condition, with original manual. 160-10 meters SSB, AM, CW low power transmitter/exciter,
with pair of 6AG7s in final. asking $100 plus shipping...

Also available is a "matching" (I bought it with the 20 A)
Lakeshore Industries VFO and original manual.
FYI, the VFO front window plastics warped over the years,
and by the time I had gotten it had scratched a bit of the paint on the dial...
otherwise looks real nice... asking $75 (will sell the VFO when/after I sell the 20 A).

thanks for reading,

brian

Hello,

my retired neighbor has asked me to post his KWM-380, sn# 1576 for him.
He is the original (only) owner, it is in very good, working condition
(just a slight bit of paint rubbed off the main tuning knob around the
finger hole).
The Collins narrow CW filter and AM filters are installed.
Also included are the original owner and maintenance manuals, and
a Collins processor board for the KWM-380 that has never been installed.
Asking price $3K, contact Paul, K2ATD, 704 483-0996
(located in Denver NC, just north of Charlotte, in the Lake Norman area)

I did. Very specifically. I even offered to pay extra for packing
material. In all cases I came to amicable agreements with the sellers, but
I was still in receipt of merchandise that ranged from slightly damaged to
totally destroyed. I'm not whining, as one of your later replies indicates,
just stating simple facts.

I mounted mine on a larger chassis with heavy 6.3 V fil transformer.
That Heath transformer is small! Duplicating the 516F2 bias circuit worked
for me. And mount a 120 VAC relay to relieve the strain on the on/off
switch.

You gotta love these wimps.

I'd like to see them in a LIVE auction. Yeah, right, the auctioneer (or anyone else) is going to be REALLY concerned about your feelings over another guy upping the ante just before he says "Going for the final time..."

Actually, I'm glad these folks are staying away from eBay, maybe they'll WHINE less on here!

3629. FS: complete Yaesu HF station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-20 00:00:00 UTC
From: Radio Randy <rjones@plix.com>
Message-ID: <36566A18.36AF@plix.com>
Source record: 94263
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hi gang,

A complete HF station, consisting of a Yaesu FT-101ZD (little bro to FT-901), SP-901P speaker/phone patch, FC-901 antenna tuner and a Shure desk mike. Also included are operating manuals for a 3 pieces of Yaesu gear and the factory service manual for the 101ZD.

This package HAS to be worth at least $500 which is the price I'm asking if it doesn't sell on eBay in the next 2 hours. I'll even pay the shipping.

You can see it (a lousy photo, though) on eBay at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=42053613

If you're interested, drop me an Email. If it doesn't sell here, I'll relist on eBay and keep trying. Like I said, a "complete" station like this ought to be worth the asking price. Thanks.

Radio Randy

>After all is said and done about eBay, the reason I'll not be buying there >again is simple. Most sellers I dealt with didn't care enough to pack their >items so they survived shipment. Out of about one dozen items purchased via >eBay, more than half of them were damaged or destroyed in shipping due to >the seller inadequately packing the item. All were insured, but the items >were irreplaceable relics of the boatanchor age.

Well, why didn't you discuss your packing preferences with the fellows that you bought from???!?!?!

I have done that when I wanted extra care taken and haven't had a problem. Some wanted a few extra bucks for the extra packing materials but that was fine with me.

I did receive one radio from a fellow that I hadn't communicated with about special packing precautions and the radio arrived damaged from the speaker having come loose and knocking a few tubes out of their sockets. I sent the fellow email just tolet him know that it arrived and had suffered some damage; he offered me a complete refund. I told him I would keep the radio I was just trying to offer some suggestions on how to better pack radios.

On Sun, 15 Nov 1998 20:38:17 GMT, the estimable egriffin@ctc.net (Ed Griffin) pontificated:

>Gentlemen,
>
>I plead guilty to posting my eBay item to this newsgroup. I have
>received a couple direct emails, of the flame nature, telling me to
>keep such off the newsgroup.

My advise is ignore those folks that continue whining about ebay here. The facts show that the quantity of posts whining about ebay far exceeds the actual number of posts actually offeringt hings for sale on ebay.

I think if most folks who want to post items for sale on ebay here they should just put "ebay" or "FA" or such in the message header. Then those that get so incensed by anything ebay appearing in the newsgroup can filter those items out.

Gerry

>watch the professionals who buy lots and then break them up and re-sell them in
>little pieces for a large markup.

I'll never understand why people get upset about sniping. Why don't
you just let ebay's proxy bidding work as intended; enter the maximum
price you want to pay for the item and then get on with life.
Sometimes you'll get the item, sometimes you won't.

So what if somebody places their bid at the last minute? To win they
had to outbid your max bid. If your first bid really wasn't the max
bid you were willing to make then you just want to play games on ebay
too.

Gerry

3638. FS: Nazi Telegraph Key & German Flameproof Key

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-21 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <7359rf$qt7$1@nnrp1.dejanews.com>
Source record: 94272

Dear All,

I still have two German Telegraph Keys for sale (the other two are sold):

Once again, please refer to pictures that Tom Perera has posted on his web page. However, these keys are not those pictured in Tom's web page nor does Tom have any connection to these keys. If you find these pictures to be helpful, you might consider sending Tom an e-mail about his great web site.

1) Baumuster T-1 style key. This key has no writing on it except on the flip cover which says "VOR DEM OFFNEN STECKER HERAUSZIEHEN". Underneath the cover is a tiny German Eagle with a Swastika in its talons. Base is fiberboard with two holes drilled in it (which I believe are original). There is no cord but the spring strain relief mechanism is there ($60.00 plus shipping). This is similar (nearly identical) to the one *on the left* pictured in Tom Perera's Museum photo.

http://www.chss.montclair.edu/~pererat/9480.gif

2) German Flame Proof Key. This one has a rubber flip top cover and is marked "Spannung an der tastkontackten 200V max.ENTSTORT. " It's mounted on a blue iron base and has about 3 feet of rubber cord attached ($60.00 plus shipping). This is similar (nearly identical) to the key pictured in Tom Perera's Museum page:

http://www.chss.montclair.edu/~pererat/9469.gif

Thanks for the read and hope there is something here you like! If you are interested in a key, please let me know if you would be also be interested in the other one in case someone has spoken for your first choice. Also, please include your mailing address so that I may calculate shipping for you.

Have a great day!

Hi group,
More specs from the expert: these i.f.'s are 3/4" square, about 2" high metal encased coils with holes in the top and bottom for alignment.
Any help will be greatly appreciated. I can be emailed at: nc183d@aol.com
Thanks,
nc183d

FS:Transmitting and Other Tubes

I've accumulated some power and miniature transmitting and other tubes. All are new in original boxes unless noted. Here's the list:.

(2) VT4-C/211, used GE. The tubes have excellent large getters, with little or no sign of use, may even be

new. Note: These tubes are
tested for filament continuity only, but are certainly good, and I'll stand behind them of course. $69.00 ea.

(3) 4-125A/4D21, 2 are Eimac, one is a GE. All apppear new. I have no way to test them (I'm not a Ham), but I'll gladly return your money if you aren't satisfied. I also have one new socket for these tubes which I'll toss in. AES gets $124.70, my price is $59.00 ea.

(6) new 8068 GE beam pentode pass tubes, octal base w/plate cap, 6.3

volt heaters, 35 watt plate dissipation, all new in original boxes, AES wants $50.00, I'd like $29.00 ea.

(1) 2C39 GE JAN original box and packing, AES gets $77.80, my price $49.00

(13) new GL-2E24 RCA, GE $4.50 ea.

(3) 2E26 RCA $4.50 ea.

(2) new RCA 6146W/7212 $14.50 ea.

(1) new RCA 6146A $12.50

(3) new 807, 2 JAN GE/Hytron, 1 Westinghouse, original boxes, $11.00 ea.

(4) 807 RCA, 2 JAN @ $12.50 ea., 2 regular RCA @ $12.00 ea. All 4 for $45.00

(2) used 807, test near new, $6.00 ea.(8) 12BY7/A RCA $10.00 ea.

(10) 12BY7/A mostly GE $7.50 ea.

(2) 5516 Hytron, test and look new, but I can't be 100% sure $9.75 ea.

(4) 5516 Hytron, used, test very strong, $5.50 ea.

(6) 5763 RCA power pentodes $7.50 ea. Good used for $3.50 ea.

(2) 5823 RCA gas triodes $14.50 ea.

(1) 7061 GE beam power tube $2.00

(1) 7551 ECG beam power tube $4.50 (a few used for $1.75 ea.)

(1) 7695 GE power tube $2.50

Many other tubes available, including a few sweep tubes. Many small signal tubes in stock. Shipping is free in the USA with a $50.00 purchase. Please e-mail me if you are interested. Thanks!

One has to wonder how many times this scenario has played out, to be hidden beneaththe "official" version of things. I can readily recount one instance.

Outfit I used to work for has nine district stations with dispatch consoles which were custom designed and built, by in-house technicians, some 20 years ago..
All were identical, simple, very practical very reliable and virtually trouble free. Nine receiver channels, three on transmit.
They used a number of mechanical on/off switching devices and a number of reliable but ordinary electro-mechanical relays, a single hefty regulated DC power supply, also built by the same techs. Extremely realiable.
Only on very rare occasions did these console installations require *any* maintenance attention, the most common problem being worn out mechanical switches-after a LONG time in service, and on rare occasions after a lightning strike on the 350 ft "lightning rod" caused a stuck relay contact or some such. And after considerable lightning mitigation steps were undertaken by myself and others, that fault became rare. Most of the console operators were familar with them to the point that they could do most maintenance when needed.

Enter the Whiz Kid. With *Spending Authority*. His take on the "old" consoles:
"We can't keep this old stuff forever, we've got to get into the 20th century".

So off goes a very *expensive* order, by contrast to the cost of the 'old' units,
to a certain vendor in Shaumberg, Il for nine copies of said vendor's latest digital
dispatch console.

Installed at the local site, comes the first thunderstorm of the season, and touches the
aformentioned 350 ft lightning rod supporting the antennas. Bingo! The new digi whizzy
console is *very* dead in the water. $20K and a couple of months later, it's finally
working right again. And this case was only one strike, at one location. More to come at various other locations, I'm certain. Word I got says that the vendor still hasn't provided the required technical training on it, and no one in the organization knows anything about it.(all nine of them). Meanwhile the old reliable units were given out to those lower down the food chain, gone forever.

The most important factor in all this is simply that those persons who have command over officialdom MUST rely on the techno-whizzies because they themselves will never know
enough about the technical aspects of their organizations to recognize when they are being
lied to. The world today is that complex, and is ran by MBA's And these problems don't just affect equipment, they directly and very adversly affect organizational operations, too. In the military -as with the police-, that means your security and mine.

What the Whiz Kid *really* wanted was $100Mil to buy a trunked system. The taxpayers wouldn't go for it. Good. A neighboring state did that, and it works just like the public cellphone system. Great, when it works. Dead as a mackeral when it doesn't, with no reMorse. Just like the rest of digitaldom.

>and
>the S meter hardly ever moves up off zero unless the station is near me.

Check the fuse (light bulb) attached to the antenna input. If the bulb is open,
or the contacts are dirty, the sensitivity will be way down and the meter will
barely move. It is located inside the final's cage and might be a quick fix.

For Sale: Swan 350 and 2 ea Swan 500's, 2 ea. 117 volt P/S w/speaker, 1 without and 2 ea. 12 volt supplies. Thats 3 radios and 5 power supplies. I formed the caps in the 350 and one speakered supply and the receive worked great but the transmit went screwy the more I transmitted. One final checked with a partial cathode to grid short that decreased in resistance with warm up. I have a new tube for this and it is included. My guess is the unit will work perfectly with this tube installed. None of the rest of the equipment has been checked out by me. It comes from a silent key in AZ and suppossedly was working several years ago and was put on the shelf as the fellow quit hamming when he got old. Cosmetically, the radios look good and a couple of the supplies need some clean up but are not dented .
I was going to fix up each unit and sell it or trade it but being handicapped, I'm dependent on the XYL to lug these things around for me and she is just not able to so I would like to sell the entire lot for $300. Keep in mind the shipping costs here which could be big unless you could meet me say 100 miles or so from Mpls/St.Pau, MN. Any interest or could possibly consider a trade for ? E mail me at: philoxeny@hotmail.com

Source record: 94300

I have an FTDX560 and have seen a couple of 400's and they have the same 6KD6 finals.

The 6kd6's are pushed to 250 watts apiece in this rig, I don't think (or know) if the 6js6's are capable of the same power output.

Also the pin connections may be different, I don't have a tube manual handy. Other values in circuit may also need changing and grid bias set differently.

I would gues the best bet would be to obtain the schematic for the FT101 or other set that uses 6JS6's and compare!

I ran across a guy that changed the finals in a Drake TR-3 from sweep tubes to 6146's, but this was a similar match - tubes with about 90 W output.

Anyway, I would be interested in what you find out!

3675. hallicrafters skyrider defiant

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-21 00:00:00 UTC
From: inagaddadavida@webtv.net
Message-ID: <4640-36572E70-52@newsd-124.bryant.webtv.net>
Source record: 94309

my father was a ham radio operator. his call was w9klm. i have had his communications reciever
in my garage for years and years. it is a hallicrafters skyrider defiant and the big matching speaker that goes with it. the cabinets are rusting through the paint all over. its very fine surface rust. the dials are yellow and everything is dirty. it worked last about 25 years ago and has never been powered up since. is this worth anything to someone who restores radios? i always wanted to restore it myself but i never had the time.
it is slowly deteriorating in an unheated garage. any advice? any offers?

Source record: 94314

Well, if you lost the bid for 50 cents, and are unhappy,
you obviously didn't bid what the unit was worth to you.
I will bid 100 dollars on an item going for 20 bucks, if the
item is worth 100 bucks to me. If someone is willing to
snipe it for 105 bucks--fine, it was worth more to them
than to me. It is anyone right to offer a higher bid in auction
before the gavel hits for the final count. Last time I looked,
Ebay was an auction site. Ebay is not the place to
look for "steals" or "bargains". It is a good place to locate
some hard-to-find gear, but be willing to pay the price.

Pete

What is wrong with the IF transformers that prevents repairing them?
Normally it is the fixed micas in the base of the transformers that go
bad, and are easily replaced with silver micas.

Pete

3686. Where to find replacement AF transformer? (Lafayette tcvr)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-21 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-2111982206250001@h1220.dialup.cornell.edu>
Source record: 94320

Lafayette 6m rig needs new push-pull output transformer, used to feed
audio to spkr as well as modulation to final RF amp.

Marking on orig.tfmr is just "T-1017-2"
(maybe a Thordarson part no.?).

Could anyone suggest where might I find one, or the equiv.?

Not sure of the ratings/impedance values
on this - it probably was designed for around
10 watts.

Most grateful for any suggestions or info,

73,
Joel

Are you sure you have the correct model #????

The current revision of the 949 is "E".. I got my 949D used about
2 years ago.. The "C" is an older version..

Current MFJ catalog price on the 949E is $149.00

These meters were originally made by Honeywell which was later bought by
Jewell Instruments. I believe a standard 50 microamp movement was used.

$175 shipped to cont. U.S.

According to the previous (original) owner it was purchased new and never
used, and there is no visible reason to doubt that.
Comes with original manual, schematic, and special cable.
One minor approx. 1 inch scratch on bottom, original plastic still on front
panel (plastic is yellowed from age and possibly nicotine).
Dusty inside from sitting.
This transverter looks very good and original, but I have never
fired it up (it gets it's power from the hf rig, which I don't have).

Price is $175 shipped to cont. U.S.

Let me know if you have more questions!

Thanks and 73, Donzil

I have for sale 2 complete twt setups <unk if working>
came from older ham getting out of equipment....
they are Alfred model 502 and model 562
I have another that was part of a 2304 station <not selling>
that showed 200mw output on a bird microwave wattmeter.
make resonable offer, they ARE heavy and are listed
from 2-5 gig outputs ranging from 100-220 mw <on test sheet>
N connector in and out.
<these units are complete with power supply and all, plug in and use>

I also have 1 or maybe 2 Thompson-CSF Th3543c TWT, that list from
5.925 to 6.435 gig collins part @ 270-0634-010 with test data
5.5 volt
2.5kv anode
1.5kv collector
1.5 milliwatts in for 10 watts out
33 db gain
These were said to work fine on 5 gig ham band
and have reduced gain on 3 gig ham band <around 20db gain>
they have SMA connectors, and NO power supply.

I have 1000's of tubes

I have a limited supply of 381 <2c39> tubes

829 tubes <8 available>
823 tubes <2 available>
lots of rectifier tubes, lots of 12at7, 12au7
lots of 6ua8 and such,
Email to
km5rt@ticnet.com
for your needs. I will let you know if I have it.

While it IS true that the manual says that the 6V6 replacement is only an emergency measure, and we know that the task of the 4H4-C is to act as a current regulator for the oscillator tube filament, it is also true that, after the fact, National put out a service bulletin (of which I have an original) stating that the difference between the two (4H4-C vs 6V6) is less than a single digit percentage point of relative oscillator drift. They did not say it is a negligible difference, but I will. Now... that said: you CAN get a 4H4-C for ~$45 (it may have gone up-I haven't checked in a year or so) from Typetronics, in FL. I have the address SOMEWHERE... if you need it-let me know.

Hello Jim,
The panadaptor works with a receiver usually with 455 if, and sees or looks at and displays the 20 khz up to 200 khz around the frequency the radio is tuned to...Hallicrafters made one and so did the original company "Panadaptor" . I have one of Panadaptors original ones here.

On Fri, 20 Nov 1998 18:50:18 -0700, the estimable "Richie L. Allen"
<kc5nzr@rt66.com> pontificated:

>
>>
>>Well, why didn't you discuss your packing preferences with the fellows
>>that you bought from???!?!?!
>
>
>I did. Very specifically. I even offered to pay extra for packing
>material. In all cases I came to amicable agreements with the sellers, but
>I was still in receipt of merchandise that ranged from slightly damaged to
>totally destroyed.

Well if they packed it as you desired and it arrived damaged why blame
ebay or those who seel there. If they didn't pack as was agreed I
would hope you mentioned this in their feedback so others might be
forewarned.

> I'm not whining, as one of your later replies indicates,

My post was intended to refer to those folks that object to people
posting messages here which offer items for sale on ebay.

3753. WTB: Natonal HRO or NC101x

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-22 00:00:00 UTC
From: Vic Rosenthal <rakefet@rakefet.com>
Message-ID: <36584693.A5EB33EF@rakefet.com>
Source record: 94358

I'm looking for a National HRO variation (any version prior to the HRO-60) with the crystal filter (i.e., not the HRO Junior) or an NC101X. This is a late 30's/early 40's receiver with the PW (HRO-type) dial and the crystal filter.

My budget will not support a museum-quality radio; I would prefer one in complete, restorable (need not work) condition.

Thanks,
Vic, K2VCO
Fresno CA

> Wayne -KF4GJP-
>
Wayne:

I have had good luck removing those Hallicrafters knob screws using "screw extractors" available from most auto parts stores. A #1 or #2 extractor will be able to get a bite in the set-screw if it isn't in bad shape. I chuck the extractor in my cordless drill. Then with the drill in "reverse" apply good pressure to the extractor and slowly squeeze the trigger on the drill. The secret is to slowly back out the set screw. Soaking the set screw and control shaft with WD-40 may help get things moving. Unless the set screw is totally messed up, no drilling of the set screw is necessary.

Hope this works for you,

Ed

Sounds like you need a high impedance headset, rather than sound
powered phones---can't figure what use they would be with a crystal set.
AES sells modern ones for $15.95 or e-mail me, I'm sure I've got a bunch
of antique ones in storage $10-$15 depending on condition.

3771. Hallicrafters SX-71: need front panel

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-23 00:00:00 UTC
From: n2rud@my-dejanews.com
Message-ID: <73cfgl$6dl$1@nnrp1.dejanews.com>
Source record: 94076

Greetings,

Just bought a refurbished Hallicrafters SX-71. It's running very nicely, but has some paint missing across the top and around the bandspread knob. All it needs is a better looking front panel to make it look as nice as it sounds. Got a panel to sell me? Pretty please? Sugar on it? :-)

Or, if you're someone who repaints and re-labels tube radios, I'll consider having the work done. Please send me information about that.

Or, we can trade your repainted front panel for mine and cash. This is a lovely radio that only needs one more piece to be perfect. You know!

If you can help, please send email to: ajninno@syr.edu

Thanks for listening...

Anton

I am selling a Drake TR-4 transceiver with a non-matching PS. It's a Heathkit HP-23, that has all the correct connectors for the TR-4. Works fine. Look very good. Complete with original manual, price $170., plus shipping or pick up at Greenville, SC.

Source record: 94093
Cross-posted to: rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

They don't make the paper Callbooks any more, but I have a couple
available.

1994 North American $ 15

1991 North American $ 15

Both of the above are "like new," left over from when we were selling
them new. They have been opened up, but that is about it.

1990 North American $10

1990 International $ 10

These two have been used. They show their use, but are not "beat up" or
damaged.

Prices do not include shipping from Florida.

Thanks.

Jim,

Think of the fun someone would have restoring and using your father's old radio. Think how he would hate to see it sitting and rotting. I say don't worry about getting rich from it. Set a reasonable price and let it go to a collector. It isn't a terribly rare item, so don't expect a lot, just remember how your father liked to use it.

Paul

For Sale:

Gonset "Deluxe Tri-Band" Receive converter, looks like a mobile accessory that converts ham bands to BC band for use on car radio. Covers 10/11/15 M, 20 M, 75M. 4 tubes. Looks to be new. $50 plus shipping.

Some 50's QST's, have the following issues from the following years:

1955: 2,3,4,5,6,7,8,9,10,11,12
1956: 1,2,3,4,12
1957: 3,5,6,7,8,9,10
1958: 1,2,3,4,7,8,9,10,11,12
1959: 1,2,3,4,5,6,8,8(duplicate),10
1960: 1,3,9,11
Also a April, 1952 CQ in the box.

That's 47 issues, I think. All are in good condition, a little light mildew staining on page edges, but the pages are all clean and tight and covers all intact. Would like to sell the whole box for $50 plus shipping from zip 93401.

Please email. Thanks.

Wanted: Prefer the SPR-4 with xtals, but will also consider the SW-4A. Not looking for a pristine collector quality rig, as I can't afford to spend much. Please let me know what you may have sitting in the corner. I am interested in the rig, even if it is not working. I do need manuals too though, as I have none for either radio. Many thanks for reading.

Chris "KX0Y"

The following books are for sale, all in nice shape. Postage extra.

"Building The Amateur Radio Station" Rider publication 2nd printing 1967
$6.00

"Getting Started in Amateur Radio" Rider publication $6.00

"Radio Amateur Licensing Handbook" by Jim Kitchen VE7KN includes a
Canadian Call Book section. $6.00

"Ham Handbook for Beginners", and "Ham Handbook for the Advanced". by
VE3CSE. Excellent training books for any one studying for a ham license.
$5.00 each.

"The Radio Amateurs Handbook" 14th Edition by K4JBI. Great shape with
dust cover. $10.00

"Popular Science Second Radio Annual" (May 1944). Projects here are a
bit different because of the effect of WW2 on electronics. $6.00

"Television - How It Works" - a Rider publication (1950s). Good if you
are into old TVs etc. $6.00

"Popular Science" - Fix your own car (1954) - so fix up an oldie. $6.00

"Popular Mehanics Shop NOtes" #36, 1940. Some of the stuff they tell you
to do would make a safety inspector write tickets - but during the war
you had to be practical. This book reflects that and has many neat old
ideas. $5.00

>

> Part of Radio Receiving Set Rxx-x
To: Na4g

Thanks for your reply. Oddly enough I sent a long detailed description
(of my CFT46154) to a California amateur's boat anchor site because he
had a picture of one similar; and got 'blank silence'. So this time I
kept it short!!!

Details; TYPE - CFT - 46154 - B
Radio Receiver 260
A unit of model RBA-7 Radio Equipment
Manufactured for Navy Dept - Bureau of Ships
By Federal radio and telephone Corporation
Clifton New Jersey Contract No. bsr 52110

This is the info on the front panel plate as close as I can type it
The Cabinet has another label/plate.

Type CN 10349 H CABINET. Navy Dept etc.
National Electrical Machine Shops
Silver Springs, Maryland
For use with Model RBA Radio Equipment.

Can't see any date on it! It has a piece of paper tape on front
handwritten with either "J9CP or ?U9CP" probably an old call sign or
beacon station?

Any help would be appreciated. Many thanks.

Hi Wayne and the rest who read this
I go through this problem quite a bit and with Hallies you have to be
careful because the knobs are very fragile due to their age. Also most
had no metal sleave. This means as you overtighten them they split in
half. That's why you always see reguests for Hallicrafters and Heathkit
knobs. The way I do it is very carefully with a small drill bit to
start and work your way up. Sorry I said the word drill! 73 Chris

Believe the HG-10 included a gas regulator for the B+ to
improve stability.
The VF-1 was the earliest model, sported a grey cabinet.
The HG-10 had the now familar Heathkit Green finish that
complimented the DX-60 and HR-10 combo.
The HG-10 (if my memory holds!) included six and two meters.

Regards

Peter

Source record: 93923

HAPPY THANKSGIVING TO ALL !

Hello, I have the following Amateur radio tubes for sale. All are NOS
in the original box unless stated otherwise. When possible, (some tubes
can only be tested in curcuit) tubes are tested with a Hickok TV-7D/U.
I have a vast amount of tested, miniature tubes for your recievers,
transmitters, test equipment, etc. at very reasonable prices. Also have
a pretty huge stock of all types of NOS tubes, please inquire about things
not appearing on any of my posts. I'm in the midst of learning how to
set up a website, perhaps in this life :o)... Shipping extra, runs only
3.00 and up, whatever the post office charges...insurance is only a buck
or so, depending on the market value for the particular item(s).
The large transmitter tubes have been checked via ohmmeter.
I will only shipped these fully insured.
Of course, i'll guarantee them to work properly, so PLEASE TEST CAREFULLY
IMMEDIATELY apon arrival, and if it doesn't do what you like, just send it
back right away for a prompt refund,(in original,shipped condition) less return

shipping charges. If defective, I'll absorb initial shipping costs.
Thanks,
if interested, drop me a line... 73's
Joe Pratt, Tubecntral@aol.com

>How does the VF-1 VFO compare to its younger brother, the HF-10?
>(or vice-versa) 73, Jeff KH6OO

The HG10 is much improved over the VF1 as it should be for a newer model. However I didn't care for the plastic gearing, and roller bandswitching dial which was hard to keep tight. One easy improvement. The VR tube which adds stability does help. However the VR tube dropping resistor is mounted under the chassis near the main tuning cap, so the heat it develops heats the cap causing some drift. Simply move the 5 watt resistor above the chassis. Drilling more ventilation holes in the top case also helps let out the tube heat to further reduce thermal drift. Of course if you want the antique value then you must live with the drift...no mods.

In 1966, I used a Heath VF-1 and homebrew power supply with a
DX-60A. The VF-1's Frequency stability was marginal. Drift
was a problem, as well as mechanical instability.

Alpha 374 in like New condition. I use this Amp everyday. Will do 2000 plus watts dead key out with 80-100 watts drive, 60watts drive will get you 1500w out. Rated for 1500 watts. Very strong tubes. This is an Auto tune amplifier, just set the band selector and Drive It or manual tune if you wish. Has built in watt meter, grid meter, plate voltage meter and peak reading watt meter.One owner prior to me. I have Original manual along with one ordered from ETO last month. Wired for 220 AC. Has safety features built in, such as automatic shutdown with excessive grid current. ect. This Amp is beautiful and had Perfect face plate and meter, works Perfect without ANY problems.
Price $ 1250.00 plus split shipping.
Thanks Cliff K5da

Marginal is putting it mildly. I finally had to abandon my VF-1 around 1966 because the pink (OO) slips were scaring me. But now I've got another one and it's not quite so jumpy after a fair amount of work. I also built it an electronically regulated PS instead of using the aux socket on the DX-35.

I worked a fellow recently who said he tamed his VF-1 by using a very low value of plate voltage.

I haven't used the HG-10, so sorry I can't make the comparison.

Oh yeah--mechanical stuff was a problem. The wiring from the 11 meter switch position was causing instability even when (obviously) the switch wasn't in the 11 M position. So I took it out.

Nick WA5BDU

3861. Update on deaf Drake TR-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-24 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <19981124114832.22268.00000058@ng-fi1.aol.com>
Source record: 93946

My thanks to those who responded with tips on what might be the problem with my Drake TR-4.
Many suggested the TCVR/RCVR switch could be in the wrong place of could be dirty, I checked that and it was ok and in the corrct position.
Others suggested the fuse lamp could be open and/or the transmit relay stuck or dirty. I checked that and bother were ok.
I did retest some of the tubes with a different tester than when I first got the set and found a very weak 12BA6 in the IF section so I replaced it. Now it is better, Im going to continue looking for other problems it may have.
It seems that first tube tester i used, which was a lab grade Hickock, was not a very good tester.
Thanks for all the help.

Alan,

Do you have any data about how sensitive the receiver was when it was
new? I had to add a pre-amp to my Yaesu FTDX-560 in order to get
"modern" performance, particularly on the higher frequency bands.

Curt Breneman

Hi Stan OM,

Not being familiar with a product named "Pride KW ONE", but I must
question the power level with a single 4CX250B tube, which has a max
plate dissipation of only 250 watts. In order to output 500 W PEP,
most linear (Class AB1) tube amps would require about that much
plate dissipation, or 500 watts. Even if it was a class C amp,
with 75% efficiency, it would still be only a 333 watt output amp.
At 500W out, you would have twice the plate dissipation
available from the single 4CX250B. Looks like a bit of marketing hype
on those specs. You have a 250-300 watt amp.
Be advised, one can buy a real 2KW amplifier, the Heath SB-220 (with
1KW plate dissipation) , for under $500.

73 and GL,
Don, W6JL

3873. Re: Navy Sound Powered Phones?

Message-ID: <19981124164023.22266.00000203@ng-fi1.aol.com>
Source record: 93958

>Navy sound powered head set is all I used on my crystal sets in the
'50s. They really worked great. You could hear it across the room
playing all night long.<

Not for the headphone set used, but because AM stations were far more powerful in the '50's than today. Good Hi-z phones are even better. FWIW sound-powered phones (unrelated to xtal sets) were the standard fare for all shipboard bridge-to-e/r (and elsewhere aboard) communication, military & commercial. This was important when you'd lose the plant (no fkn power to anything until emergency diesel online). They have the fidelity of a string & two tin cans.

My recollection is that on any frequency below ~25 MHz, a 20 foot piece of wire connected to the antenna connection would hear down to the local noise level, and any beam would provide all the signal you needed on all bands.

Source record: 94021

Greetings all -

I'm trying to ressurrect a Gonset G-151 FM Communicator. So far I've managed to get the heaters on line
and B"+ to the receive circuitry. Can anyone help me with a schematic, or at least the jumper configuration for the AC power connector? This one has a 15 pin Chinch Jones type and should run on AC or DC.

Thanks muchly in advance.

-df

The following URL takes you to a New Zealand amateur radio store (the largest in the country).

They have a listing of available used equipment including a KWM-2, 75S3B, Eddystone 680, National RF-49 HF/FM and other equipment.

The nice thing is if you are using US$, the NZ =>US exchange rate is 2:1 so its almost 1/2 price in US$ to the listed prices.

Their address is: http://www.radioinfo.co.nz/used.htm

I don't work for them, I just thought I'd pass this on to whomever might me interested in seeing perhaps some different equipment offered for sale.

I am looking to build up a supply of unused resistors to use for boatanchor type rigs. I need 1/2 watt and 1 watt or 2 watt carbon composition resistors of mixed values. I could also use other small component parts like capacitors or other related parts to put together a small component supply for the shack workbench. If you have any and want to turn them into a few bucks let me know what you have and how much you want for it.

Source record: 94033

Sure, they have a SSB position on the mode switch. It required a
separate low power sideband transmitter (exciter) wherin the 500 acts
as an amplifier. There is actually a separate so-239 for connection of
the coax coming from the SSB exciter.

Source record: 94045

I am selling two unusual receivers from my collection:

National NC-101X receiver, with matching National speaker, and original manual. In very good to excellent condition. Has S-meter conversion (probably in late '30's, early '40's). Has been re-capped with Orange Drops and aligned. One of the most sensitive and best CW receivers I have ever used. Price $300.

Technical Radio Company model LRR-6. Not listed in either Moore's or Ostermann's books. A 15 tube communications receiver with 3 ranges of IF selectivity. Has all the usual controls: BFO, send/receive, NL. A very unususal feature is the "magic eye" tuning indicator on the front panel. Very good condition. With copy of the manual. Price: $250.

Since these are very heavy, I would prefer pick up at Greenville, SC.

3918. WTB: Drake B-line PTO-dial knob

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-25 00:00:00 UTC
From: Sindre Torp <sindtorp@online.no>
Message-ID: <01be18b3$51922f20$79a44382@default>
Source record: 94047

Hello,

I'm looking for the main-tuning dial knob for the Drake B-line. The skirt ring is not needed. May swap for 2 new C-line PTO-knobs.

Thanks,

Sindre Torp, LA6OP

All else fails, RadShak has a nice 10" speaker and its been on sale for awhile now. Its listed as a woofer, but I ran a sweep on it and it works just fine for boatanchors! I had to replace a speaker in one of my older Hallicrafters enclosures.

3936. FS: New Triplett 630-NS VOM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-26 00:00:00 UTC
From: acomarow@aol.com
Message-ID: <19981125202123.10545.00000534@ng-cf1.aol.com>
Source record: 93967

I have a brand new, in the box, Triplett 630-NS VOM. Triplett still makes it, and it goes for $370 or $380, I don't recall.

Why do I have a brand new one, you ask? Because the Duracell batteries in my old one leaked all over the inside. I sent the meter to Duracell (read the message on the side of every battery), which sent it to Triplett, which pronounced it unrepairable, and Duracell sprung for a new one.

Now, the truth is that I'm perfectly happy with my old RCA Senior VoltOhmyst and Wavetek DVOM, plus a few assorted RatShack miniature VOMs for continuity checks and such. I do not deserve the Triplett. It is a superdeluxe VOM. 200,000 ohms/volt on six DC ranges, 100,000/volt on five other ranges. DC accuracy is 1.5 percent of full scale. DC current ranges go down to 0-60 microamps. Six ohms ranges. No finicky 15V or 22.5V batteries--1 D cell and one AA, that's it. Overload protection (diodes and fuse). With test leads and manual.

I am offering it for sale for $175 plus shipping--less than half of Triplett's price.

Best, Avery W4OGK

From: TLNixon@revealed.net
Message-ID: <365cb5e9.122545138@news.revealed.net>
Source record: 93969

In the past couple of years, in one ham radio magazine or the other, I remember seeing asmall one tube project to buiold a SSB product detector into Vintage rigs that have only BFO/CW capability.

Of course now I can't find the article!! Does anyone have any idea where this was published, or what month and year?

It involved building it in a tiny little Radio Shack box which was secured to the main chassis with a "no holes" adhesive-type mount so as to not ruin the value of the rif.

Wanted to incorporate it in my old RME-Elcetrovoice 4350 to accompany my Heath DX-60 and Glove DSB-100 transmitters.

Message-ID: <365D74F9.B8B27DD7@cjbsys.bdb.com>
Source record: 93983

I was cleaning the basement the other day and came across some old Motorola crystals for VHF. They appear to be in ovens of some sort. (~ 1' x 1' x 2') They have various markings like
RN1
6174.375 KC
T148.185 MC

which I assume is the fundamental crystal freq and the final transmit freq. Others have similar markings.

I also have 1 Vibrasponder @ 162.2 cycles

Unless someone can convince me these are rare and valuable, I'll give them away for the cost of shipping.

From: Brian Harrison <bharrison@earthlink.net>
Message-ID: <73jmg8$s31$1@oak.prod.itd.earthlink.net>
Source record: 93987

Hello,

my retired neighbor has asked me to post his KWM-380, sn# 1576 for him.
He is the original (only) owner, it is in very good (excellent?) working
condition
- just a slight bit of paint rubbed off the main tuning knob around the
finger hole.
The Collins narrow CW filter and AM filters are installed.
Also included are the original owner and maintenance manuals, and
a Collins processor board for the KWM-380 that has never been installed.
ASKING price $3K, contact Paul Houck, K2ATD, 704 483-0996
(located in Denver NC, just north of Charlotte, in the Lake Norman area)

thanks for reading,

brian

Depends on how determined you are to reconstruct the original sound. Stay away from acoustic suspension type of drivers, they require a more closed, tuned cabinet. If you can find a general purpose driver with roughly the same free air resonance as the original driver, you'll be very close to the orignal sound.

To find out the free air resonance of the original, you need to find someone with an original and have them test it. Easily done, connect any audio generator through a 100 ohm resistor and, with the speaker out of the cabinet, preferably hanging from a pair of wires in a the room, but in a pinch, sitting facing upward on a small table, preferably supported by something with a small foot print. (more creative approach might be to set the speaker facing up, resting on a speaker stand). Sweep through the audio spectrum measuring the voltage peaks across the voice coil, with a VTVM. The highest peak will be at the free air resonance of the driver. Replace with a driver of the same characteristics.

Now, that's if you want to be truly anal about it. If you are interested in a quality fix, but not worried about an exact match, the real world benefits of which can be debated, then find a general purpose driver of the same size, and same impedance, and drop it in the hole. Just avoid acoustic suspension drivers.

Any balance struck between these two extremes, will get you where you want to go.

How about re-coning the original? Eddie's Reconing Service, at
(213)221-3714 (840 Cypress Ave. Los Angeles, CA 90065) charges $30 for 3-6"
speakers last I heard. I've seen their work, which is much more than just
reconing. They also seal the back up and repaint the frame. I've never used them
myself, but plan to when needed. I'm told they've been at the same location
forever, which is a good sign.

After listening to shortwave broadcasts for a year of so on a Knight-Kit Star Roamer, I got my license in 1968.

My first rig was another Knight-Kit, the T-60 60 watt (supposedly) CW transmitter and a borrowed Hammarlund HQ-110 receiver. The most I ever really got out of the T-60 was about 25 watts, but with it, a W3DZZ trap dipole, and my three 15 meter crytals, I managed to work about 20 or so countries.

Despite the wrath and disdain such comments seem to draw these days, I got started with CW back then and still enjoy it today.

Kent, AE4Y

I recently purchased an expensive multiband sw receiver, Panasonic RF 5000A, circa 1978.
I am try to bring it back to perfect condition.
The whip antenna is 3 feet high extended, with 6 6 inch sections.
The second section from the bottom wiggles when extended, where it enters the bottom section.
Also the fifth section can not be fully pushed into the bottom section, in order to fully collapse the antenna. I remains about an inch from being fully collapsed. You cannot push the 5th section in this last inch.
I would appreciate any advise on

1) how I might repair this antenna or

2) a source for a replacement.

The original Panasonic part number was "Whip Antenna, PN# RANT145-7TA"
Thanks for your help.
Please email me mmcintosh@intertrek.com

I had a Star Roamer! But my first rig was a little two-tube
super-regen my dad and I built out of the Handbook. I worked 18 states
and 7 countries with that little pup.

Then I got a Globe Scout and a National NC-303 (super receiver!).

OK, I'm 99.9% done recapping this beast and replacing the resistors that need it but I cannot find two parts on the schematic. Can anyone ID these for me ?
Or, does anyone know where I can get a SAMS Photofact for this beast at 11 PM Thanksgiving night ?
ARRRGH

The parts are a .02 cap and I believe a 10K resistor. The resistor is the first one on the front panel side of the terminal strip located directly behind the RCV/Standby Switch. These feed directly into the xtal filter can and also tie into parts 66 and 67. They are nowhere on my schematic that I can find.

Any clues or help would be greatly appreciated.

3999. Re: Radio more fun in the early days?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-27 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19981127114948.25361.00001751@ngol01.aol.com>
Source record: 93874

Was radio more fun in the early days? Yes and no.

I started out in 1967 as a 13 year old Novice with a two-tube receiver and a one tube 10 watt transmitter. One 80 meter xtal, a random wire, and a knife switch TR system. My Elmers were books, like the ARRL handbook, Understanding Amateur Radio, and back issues of QST and CQ. It was a lot of work and QSOs did not come easily - but what a thrill when things actually worked right!

Had lots of time, but almost no money for ham gear.

In the intervening 30 years, had all sorts of rigs, mostly "classic boatanchors" (back then they were called "old junk") which usually needed work to make them function. Had a Heath AR-2, QF-1, DX-20, VF-1, Hallicrafters SX-99, Viking Adventurer, and various Command sets and other surplus. Later on (early 1980s) I had a TenTec Argosy. But I kept learning how to build better rigs than I could afford to buy, so each set was eventually sold.

All this time I was operating as much as possible - traffic nets, ragchewing, some contesting, etc. CW only - could not afford voice.

The "low point" was when I moved to an apartment in 1977 and had to get rid of lots of stuff, and could not get on HF (time and antenna limitations). So I got a Heathkit HW-2036, one of only pieces of ham gear I ever bought brand new. (The other was my Vibroplex bug, [1974]). Built the '2036 on the kitchen table in the apartment, and was only on 2 meters for the next few years until I bought a house. Still have the '2036 - still works FB.

Now I have a much more advanced setup - but still all homebrew and home designed. Still not much money for ham gear! 100 watts output on 80/40/20 CW, transceives, has cascaded sharp filters and some neat features. Built out of "recycled" components, big and heavy and spread out over several chassis. Not "state of the art", I suppose, but works pretty good - 574 QSOs in 76 sections in the 98 CW SS with very simple antennas (80-40 inverted V at 35' and a quarter wave GP for 20 - all homebrew, of course) - and 98 was not a record year for me. See July 1995 ER for pix and a story. Still a thrill, but of a slightly different kind. The thrill now is seeing what I can do with the resources available.

And another, more advanced, rig is in the works. Time is the major problem, but that just means patience is needed.

I think the trick is doing what you really like, not what the masses seem to be doing. I don't like the idea of having a rig that wasn't easy to work on, and whose resale value I had to worry about. I particularly don't like having a rig that doesn't have the features I want, but is full of others I don't need. I look at the ads and see the shiny new sets, which look good until I find out that you can't turn off the AGC, and a CW filter is an accessory that costs as

much as I spent on my whole rig! So the basement is full of parts and the soldering iron doesn't get cold.

I have an excellent late production RE 312B-4 on eBay. Even the interior is dust free and shiny - showing little or no use. A late model - it has an MCN number in lieu of a serial number - MCN 8018.

This is the perfect addition to your late model S-Line or KWM-2/2A.

If you are interested, please check it out - 5 day auction only! Good pix.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=45070082

Thanks, Al

I have a very nice and very rare Atlas 206 external VFO. This is the VFO that also functions as a frequency counter that matches the Atlas 210x (80-10m) and 215x (160-15m) solid state mobile transceivers.

I am looking for the manual. Am also considering selling it outright for $155. o.b.o., shipped conus.

(I also need a manual for an Atlas 210x & matching Console. I will probably have to sell that as well. Asking $175. for the rig, $125. for the console, shipped conus.)

Started out in 1961 with a used and abused Heathkit AR-3 that I had to keep on a separate shelf so it wouldn't jump out of band when I pounded my key. Built a single 807 xtal controlled xmtr with most parts from old TV's, only had three xtals, two for the 40m novice band and one for 80. Ran an insulated piece of wire thru the wall out of my basement bedroom, up to the eve, and out to a big oak tree a couple of hundred feet away, and another to a water pipe. Never heard of tuners!

Sure love my 830 today! :-)

I wish I still had my first rigs as well. In 1977 I purchased a Hammarlund HQ-180AC receiver and a Hallicrafters HT-32B transmitter. They both looked new. Hundreds of hours were put on them, both CW and phone. I am still tube-bound today with Drake B- Line, as I like them very well. I do miss though, the "big" rigs I started with.

A proper answer, Jeff. As a rule of thumb, any of the glass-bottle tubes will likely float very well. OTOH, your average TWT (with an aluminum case and copper heatsink), klystron or magnetron (mounting structures and honkin heavy magnet) or ceramic body tubes (4CX1000, fins and mounts) will easily function as a boatanchor.

My bet is that a Nuvistor and a "lighthouse" will also sink.

If you can supply a model number, that will help any interested parties estimate how much it might be worth. Zenith TransOceanic radios were made for a number of years and they're not all equal.

If it is a tube model, open up the back cover and look around. If there's a user's manual, that will give the model number. If there's no book, look for a model number stenciled in white paint somewhere inside the back cover. If you can't find either one, look for a chassis number on the chassis (innards).

If it's a solid-state model 1000 or 3000, the model number is stenciled on the outside of the back cover. This web page leads to a number of TO pictures with some more info:

http://www.accessone.com/~philn/transoc.htm

Cheers.

Phil

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works.. xxxxxxSOLDxxxxx
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501 xxxxxxpendingxxxxxx
COLLINS T217 gr/r27gr/md125agr reciever and transmitter
for 200-399 mc AM military/Faa was at the Lubbock
Faa tower

Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

make any resonable offer to
kevin

I have a set that I am thinking of parting out
it is a COLLINS T217 - R 278 series.
I believe that this particular set came from the Lubbok
FAA control tower.
The thing is built to withstand a fall <IMHO> It tunes from
220-399mhz, and is AM only. I do not know the
actual output of the xmitter, BUT the chain goes
as follows.....
6v4 <X2> into 2c39 into 2c39 into 4x150 <x2>
This unit comes with the matching power supply
and the cabling to make it work together.
It will do whatever <150 watts carrier I believe>
all day, all night and into next year. This is VERY
heavy, and I WILL NOT SHIP. IT will be for pickup
or delivery in 200 mile radius of North Ft Worth TX
and available until 11-25. IF I get no resonable offer
I will part the unit out.
I do have some brief diagrams of the unit, and the
schematics are on the sides of the perspective
units. I am sure that because of the era, the reciever
sensitivity is not the best it could be.

I will entertain best offer OVER $150 plus gas money.
There is at least 150 dollars in the 2c39/4x150 and
sockets/chimneys. Not to mention the SUPER heavy
duty power supply that could be built from this unit.

I can be reached via email at
km5rt@ticnet.com

thanks for your cosideration

I have for sale a 242F-3 RF Unit and a 242F-3 Pwr Supply/Mod Unit. These are Collins winged emblems, untested (bought on an estate sale) but appear to be in good cond. They are for a rack and I have both front and rear covers. Big power stuff. The Rf Unit weighs 26 lbs. The Pwr Supply/Mod Unit weighs just over 100 lbs. They are fixed frequency units but could probably be converted to VFO. Also have a Collins 51M-J Vhf Fixed frequency Receiver w/manual. The receiver is in good cond also and is the rack type w/covers. These units are complete and in good condition. Will take $300.00 you pay shipping OBO. Can supply pictures upon email. email turbo22367@aol.com Steve

4040. FS:R&D 1234 tube tester(Commercial cardamatic)w/cards

For Sale:R&D 1234 tube tester. This is the commercial cardamatic, the same as the 15874-L2. This was made by Hickok. Comes with a complete set of military mylar cards, calibration cards,Zener type calibration cell(Does not use a battery inside, so it is good permanently),all documentation to service,use and maintain the machine. This is a great tube tester. It works perfectly. It is in a metal case. The cards are in a separate metal case.Cosmetically the outside has the usual scratches, the front panel is nice.The card case is a little beat up but the cards are like new.It checks most tubes. The card set is over 2400 cards.I am asking 500.00+ shipping. Please reply by email as I don`t always read all postings. Thanks for looking.

I started shortwave listening in 1960 with a Hallicrafters S-107.
When I got my novice license in 1961 (KN0KDD), my dad got a HT-40
and a Hammarlund HQ-100AC. When we got our general, we got a
Valiant transmitters

I have large transformer & Powerstat I'd like to sell. I'm not sure what the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

The Viking II CD was popular among Civil Defense groups in the fifties. This was a model manufactured for Civil Defense use. I really don't know if hardwarewise it was any different than the standard model Viking II.

Yeh, and the dial was calibrated 0 to 1000 and you looked up the
frequency on a chart - very approximate. Expensive, yes, competitive
with today's dials, no.

Bob C.

You don't get unless you ask!!! $300.00 should be more like it. While it is a above average radio, it's still a "amateur" radio...
not a radio of "professional" quality. But, someone may be stupid enough to pay 3 thousand dollars for it because they have no idea what they are buying!

Walt.

I recently acquired a Henry Radio Tempo One (early model, not the black face & it has the analog dial) that really needs some TLC.

One of the problems is that you can no longer see the nomenclature on most of the tubes - so I have no idea what they are, or what settings to use to test them...

I'm in desperate need a schematic and if possible a copy of the manual for this rig...can anyone help?

I'll certainly pay for any costs incurred in copying, etc...

Thanks,

John

They don't make the paper Callbooks any more, but I have a couple
available. Two are almost like new; the others are used.

1994 North American $ 14

1991 North American $ 14

Both of the above are "like new," left over from when we were selling
them new. They have been opened up, but that is about it.

1985 North American $ 9

1990 North American $ 8

1990 International $ 8

1990 Supplement (includes both US and DX) $ 3

These have been used. They show their use, but are not "beat up" or
damaged.

Prices do not include shipping from Florida.

Thanks.

4067. Sell HQ-180C With Matching Speaker Cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-28 00:00:00 UTC
From: witmerjr@aol.com
Message-ID: <19981128163923.10584.00001628@ng-cd1.aol.com>
Source record: 93751

Very good condition HQ-180C with matching speaker acquired in trade. (The original speaker inside the cabinet may have been replaced) Some minor rust around feet of speaker and one "foot" is missing off of the HQ-180.

Probably needs some alignment though I was copying many 10 meter signals today.

$350 plus shipping from 19446

Source record: 93755

Clegg Venus - early model. With power cord for use with Heath HP-23 series supply and copy of extensive manual including some service notes.

Is not "Collector quality" but is in good condition.

It has an extra female 11 pin socket mounted on the rear panel - very good job done - Probably done to allow use of SB-500?

Plate current meter appears to read low.

Could use a good overall tune-up - specially transmitter - Hasn't been used in a while - last used about two years ago in June VHF contest. AT that time it appeared to have good carrier & SSB suppression

$90 plus shipping from 19446

Hi Walt,

I don't know who you are as you don't have the balls to
sign with your name or call and hide behind a anonymous
email address. A KWM-380 is well worth $3.000 and with
all service mods is traded for much more. If you don't
know about it don't make such destructive comments.

The KWM-380 and its general coverage version the HF-380
were sold to many government agencies and even to the
military.

Please,
From your description, it sounds like a homemade 0-135 volt / 10 ampere variable isolated ac supply, with possibly a dc section also. More information needed: are there diodes and capacitors inside (dc section), what are the meters marked, and what are the current ratings on the transformer and the powerstat?
It's use was on a test or repair bench to start equipment gently, to isolate/float the tested equipment away from the ac line neutral wire, and to test equipment above the rated 120 volts for UL/reliability checks.
It's current value for new items can be found in Allied's catalog; just guessing at $300. total for the two big pieces. The transformer and powerstat are rugged and normally don't fail, but other parts may have gone bad.
Shipping weight is about 50 lbs, no? What is your shipping address?

Regards, DLR c/o Topper

Message-ID: <73q4elfal1@news1.iamerica.net>
Source record: 93816

Well, I've moved and a few of you have been trying to locate me to get a nameplate for St. Julian's Creek R-390A's.

Here is the new address:

Tom Marcotte N5OFF
242 Chestnut Oak Drive
Mandeville, LA 70448

The description of the nameplate follows.

73 Tom

I had a bunch of generic repro tags made up for the guys who got rigs with no tags at all.
To avoid confusion with the originals, the tags are made with a unique, factual,
but generic design. I had them made by a nameplate company in Mass.
The fit and finish are just like orig of this size (the short/wide variety).

The repro R-390A tags are 1" x 2.5" etched aluminum, and they read this:

RECEIVER, RADIO R-390A/URR <== this type is larger

DESIGNED BY COLLINS RADIO COMPANY
CEDAR RAPIDS, IOWA
FOR SIGNAL CORPS, U.S. ARMY

NSN 5820-00-538-7555 <== this type is larger

115/230 VAC 48-62~ 220W

The tags are $9 ea, $16 for two, or $35 for five.

The HP-23 series supplies with 12v are, in fact, to provide fil. power.
Check any SB-100, SB-101, or HW manual and see what the filament
requirements are (were). That should give you an idea. I don't think
it will do over 4A, however.

The CD model was "certified" by the FCDA for use by that agency and by amateur groups that OCDM and FCDA supplied them. As I recall, they have a bit more shielding and have PTT, which standard V-2's didn't have.

And most important, had slight changes in the tuned circuits so it was continuous coverage. Usually the standard model would tune up on any HF frequency, but the CD model was certified to do so. The FCDA certification was a yellow sticker, and the funds to purchase it with. Pretty loose control back then. I don't think OCDM came along until well after anybody remembered what a Viking II was.

Cary--

You need to find a soldering iron tip or a nail or a piece of piano wire or equivalent that you can heat red
hot and shove down the set screw hole. Anyway, if you can get heat down into the set screw you can cause
enough mechanical torsion to free any corrosion or "interference" (crossed threads etc) by heating and
consequently cooling the set screw and its surrounding. If screw is an allen type set screw you will have a
"socket" in which to stick the heat poker. Otherwise you will have to be sure that you can get as much heat as
possible onto the surface of the screw.

Be advised this can be very tricky as you indicate that the knobs are still on the radio. You also have to
be careful of the knob it self. Nevertheless, I've freed numerous stuck set screws this way. I admit most were
allen type.

Also, you have to be careful of the knob itself. You'll have to use careful judgement.

If the liquid wrench and derrivates don't work, you may wind up have to use the dreaded drill....

Good luck.

Source record: 93826

Help! Can anyone give me some information on the following iron?

Kenyon S16851 - transformer ??? Black enclosed rectangular, solder pin connections

Thordarson 6752 --

Looks like driver xformer as one winding is marked P-B-P and other winding has a bunch of wires coming out of it. Wire colors do not look like speaker output taps, but this unit could be an output xformer...

Thordarson T19M14 -- this is a 20W multi-tap mod xformer, but what are the pin out connections on primary and secondary?

Stancor - A-3893 -- 60W multi-tap mod iron, as above, what are the pin outs on primary and secondary?

Any help much appreciated.

Thanks

4093. FS: Hallicrafters S-31

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-28 00:00:00 UTC
From: Craig Smith <ip500@roanoke.infi.net>
Message-ID: <3660BEF3.4C01@roanoke.infi.net>
Source record: 93827

I just posted a Hallicrafters S-31 BC/FM circa 1940 HiFi tuner
to the baswaplist and hallicrafters@qth.com reflector lists.

Anyone who isn't on those lists is welcome to make an offer on this
rare set. The FM covers the old 40-51MC band, so it isn't much use
to anyone but it is a very scarce piece of Hallicrafters history.

Condition is about an "8" or so. Much better than the one in the
Dachis book. [his is missing the case and has a bad repro dial bezel].
This one is an untouched original and even works [well on BC band, ?? on
FM--not much down there around here]

In lieu of doing the dreaded "e-bay thing", I'm going to look for best
offer over the next week.

Thanks, Craig

I think you may be right YI have large transformer & Powerstat I'd like to sell. I'm not sure what
the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

I think you might be right Topper!
The DC section has no caps or diodes, just 2 wires + / =. The meters are marked, 0-30 dc, 0-150 ac, and 0-2 (4a handwritten on face). Current ratings for both units are 115 vac each. The total weight of all combined I'd guess to be around 30-35lbs. I'm located in Troy, Ohio 45373 for shipping purposes.

Thank You!

-ERIC

You may try using a screw extractor tool before resorting to the drill.
These are available at hardware stores in different sizes. Simply insert it
in the reamed out allen screw and crank it counterclockwise..
If the 71 has flathead screw in it's knob then the screw extrator won't
help. Possibly you could grab the shaft inside the radio with pliers then
twist the knob until it breaks free but only if the shaft is round and not
flat obviously. Otherwise try some WD40 and pray.

Steve N4LQ

Don't forget Customs knows how to operate a calculator. The company had best be talked to about their shipping policy. A clearance from customs out of NZ and into the US are 2 seperate charges. But besides that. If I could sell my IC-745 for $1,395 like this place offers I'd do it quicker than a heart beat. Some other prices might not be bad.

I have a set of 2 different size nut drivers made specifically for this purpose. I believe they can be purchased from Newark or GC Electronics still. They consist of a screwdriver type handle and a hollow split shaft with outer sleeve that forces the split shaft to grip the knurled nut.

When I saw the subject header originally, I thought it was about a CD-ROM
full of information about the Viking II.

It was only when I read the message that I realized they were talking
about a special model of the transmitter.

I know about Civil Defense and that there was some equipment years ago
that had special models for it, but it is interesting how we interpret
what we see, and forget that not everyone will know what some terinology
means.

Looks like the poster typed the eBay address in instead of cut/pasting
it. Naturally, he got it wrong when he did it HIS way.

I'd repost the correct address except for the fact that it is an empty,
used Heathkit carton and his min. bid was $7.50 (whew).

Source record: 93770

Got an old rcvr which works, only the S meter barely moves at all.

Related IF tubes test fine. What is a likely cause of the sluggish meter?

The zero adjust control works, but doesn't seem to affect meter deflection (signal vs. no signal); the reading stays practically the same, whether it is set high or low.

Also, what is the adjustment "screw" on the face of an S meter for (just below the needle), and how should it be set? It also seems to vary how low the needle drops.

Many tnx
N1AEP

hi--There is a nut driver type that is made to do this job. Probably had them
at the radio factory originally. You might try protecting surrounding paint
with masking tape temporarily and using gas pliers.

The screw at the center of the meter face sets the "zero stop/rest" position of the meter. On the inside of the meter case this screw has a stem attached off-center to the threaded portion of the screw. This stud fits into a slot at the base of the needle indicator in such a way as to move the needle when the screw is turned.

Oh, I forgot your other question. The S-Meter response to a voltage developed across a resistor in the grid circuit. This resistor may have changed value enuff to have upset the voltage being displayed on the meter. So test measure these resistors and replace as needed.

The screw on the face is to mechanically adjust the pointer to zero. On my Hallicrafters SX-42, you adjust this with the radio off, turning the screw so that the pointer is lined up on the rightmost line. The other adjustment is electronic and is done with the radio turned on (antenna terminals shorted to ground, AVC switch turned on, volume and sensitivity set to maximum). This time you set the pointer to zero on the left side.

This may be too obvious, but have you checked the connections on the meter? On my SX-42, the connections are screwed on, not soldered, so they may become loose or corroded.

A meter depends on a working AVC circuit, so troubles in the AVC could affect it. So could a lack of gain in any stage preceding the meter, I suppose. Apart from tubes, common causes of trouble include leaky capacitors or resistors whose values have drifted upward. The old paper capacitors are the first thing that I'd check.

Phil

Those switches usually have a hex nut on the rear of the panel that is
used to properly space the amount of switch exposeure. Years ago I made
a open end wrench out of 12 ga. sheet metal with a 45 degree bend on one
end and almost a 90 degree on the other. Now it's a breeze to remove
those switches. I just loosen the nut and remove the knurled nut by
hand. I have also seen a nut driver to fit those rings but never needed
it.

All,

Thanks for reading this!
I've just got hold of a nice FL2000B amp to go with my FL/FRDX400 twins and
was wondering
if anyone has a copy/original manual for the amp and wouldn't mind taking a
copy of it for me ?

I am quite happy to pay copying and postage costs, I'm in the UK.

Please reply direct if you can help!

Many thanks!

I have a small quanity of Daka-Ware knobs for sale:

(8) Skirted knobs the same size as A-line Collins receivers use for the main tuning knob. $6 each plus postage.

(40+) The same sized knob without skirts. $2 each plus postage. $10 minimum order.

(25+) Same sized knobs, no skirt, but metal pointers. $3 each plus postage. $9 minimum order.

(10) Isolantite Mfg Corp (1953) porcelin spreaders for tuned feeder lines. You'll never see these again. 6" end to end with 5" separation. $35 takes all 10 I have. All to one buyer only.

(?) 1 3/4' egg insulators 10 for $5 Minimum 10.

(20) James Millen shaft locks for 1/4" shafts. New in sealed boxes for 75 Cents each. Minimun order 10

(?) Large quantity for trimmer caps. Different value, easy $2 or $3 each in a parts house. 10 grab-bag for $7.50

Buyers pay postage in addition to quoted prices.

Thanks

LO>The Viking II CD was popular among Civil Defense groups in the fifties. Thi
LO>was a model manufactured for Civil Defense use. I really don't know if
LO>hardwarewise it was any different than the standard model Viking II.

LO> Joe

The model was same as the standard product except, cost was reduced for
sale to "authentic civil defense organizations who were authorized their
use in offical training nets and operations. They were supposed to only
be used on amateur frequencies during drills or as liason uses in
conjunction with the offical use. Due to federal govt sharing of cost,
of cost they were marked with the CD symbol etc and were for offical use
only. Also due to their origianl purchase route; I am unsure what the
regulations regarding their resale and use in non-cd environmet might
be. Laws and regulations tend to be easy to setup; but are infrequently
rescinded or rewriten for changes in society.

Same comments apply to the Gonset products which were sold under a
simular arangment. Due to the cost benifit of using those E.F.Johnson
and Gonset products; as well as their status as "offical equipment".
they tend to be common variants.

The Viking II CD was popular among Civil Defense groups in the fifties. This was a model manufactured for Civil Defense use. I really don't know if hardwarewise it was any different than the standard model Viking II.

Joe

Yes it was. But not by much. Read one of the other posts on tuned circuit differences (as far as I know this was only in the low level stages - osc, buffer, driver) and may not have even been changes but a certification by the CD powers. But there were several other concrete circuitry changes in the audio section that included a clipper tube (6H6 if memory serves) and associated circuitry and also PTT.

Item #1.....

Piersen KE-93 (circa 1952-54) HF receiver. 80 thru 10 with matching 12 volt vibrator power supply. I have been a ham almost 40 years and I have only seen two others like this, and they were both rough. However this one is in excellent condition (cosmetic 8.5 to 9 on the scale of 10). I have the manuals and docs for this receiver but I don't have the power cable from power supply to receiver. However the wiring diagram is shown in the manual. It shouldn't take much to build a cable. Pinouts are also included in the docs. This unit was originally intended for mobile or base operation. Its about 7 inches high // 7 inches wide // and 12 inches deep. Matching supply is same width and height but about 5 inches deep. This is a really unique receiver. It has a beautiful slide rule dial on a rotating drum.. I can email you a picture if your interested and the spec page from the manual.. This radio is complete and has a beautiful polished chrome finish. Very unique and rare....$150 shipped anywhere in CONUS

Items #2 and #3.....

KAAR- KE-23A HF receiver (circa 1948 to 1950) This is a Canadian Marconi receiver which covers all the HF bands. Its also in very good cosmetic condition. It has two large sliderule dial readouts (one for main tuning//one for calibrated bandspread) and a tuning eye indicator. It lights up and signals are present but not very loud. I also have the matching HF transmitter for this rcvr. Its the KAAR-10Z transmitter. Uses a single final tube (I think its an 807) I havent looked at it in quite a while. But both units are in very good condition considering their age. I would rate them both as 8 on the scale of 10 cosmetically. A very nice and rare addition to anyone's collection.....More info on request (including pictures is you like) just email me. $200 for the pair shipped to your door anywhere in CONUS.

Item #4.....

Morrow FTR HF receiver with additional receiving converter 5BR2. These were originally designed as mobile units. According to spec sheets they will run off of 6 or 12 volts with proper jumper changes. These are small and unique units . About 4 1/2" tall by 4 1/2" wide and 6" deep. Full HF bands and S meter. These are a little rough cosmetically (they could be cleaned up to look nice though) and could use a little paint. But no big dents or dings. Very unusual and I have manuals and all the docs. $65 shipped to your door anywhere in CONUS. Email with questions...Pictures also available.

Happy Holidays.....Bill

Has anyone here come up with a good way to remove and retighten the knurled, round control nuts commonly found on older toggle switches? Pliers invariably damage the milling, and have sometimes distorted the circularity of the ring when removed from a control with one flat side.

I am cleaning up a SX-101A that has spent the last "X" years in an Eastern basement. I want to apply metal polish to the washers, switch bat, and to the knurled rings to remove surface discoloration.

Source record: 93846

$175 shipped to cont. U.S.

According to the previous (original) owner it was purchased new and never
used, and there is no visible reason to doubt that.
Comes with original manual, schematic, and special cable.
One minor approx. 1 inch scratch on bottom, original plastic still on front
panel (plastic is yellowed from age and possibly nicotine).
Dusty inside from sitting.
This transverter looks very good and original, but I have never
fired it up (it gets it's power from the hf rig, which I don't have).

Price is $175 shipped to cont. U.S.

Let me know if you have more questions!

Thanks and 73, Donzil

>Thanks in anticipation,

>Chris Clotworthy GI7TEU

Hello Chris,

Here's the instructions, paraphrased from the manual.

First, always start with the switches in the following positions:

POWER - Off
SHORT/TUBE TEST - 1
LINE ADJUSTMENT - Extreme CCW
A - 1
B - 1
FIL - Off
MICROMHOS - 15,000
L - 80
R- 80

Second - Look up the tube type number in the chart and set the A, B, and FIL switches to the settings on the chart. Insert the tube in the socket with the correct letter. If tube has a topcap, connect CAP lead to topcap. If tube is an acorn tube with a cap lead, connect ACORN CAP to cap lead. If tube has a star in the "NOTATIONS" column, (807, 871, etc.), plug the banana pug end of the 12 inch plate cap adapter into the upper left contact of the 6 pin tube socket (#4 pin) and connect the other end to the topcap.

Third - Turn on POWER. Press LINE TEST button and rotate LINE ADJUSTMENT knob until meter is exactly at the LINE TEST position (1500 on the scale).

Fourth - Allow at least 30 seconds for tube to warm up.

Shorts test - Do this test first, and do not try any other tests on tubes that fail shorts test.

Turn SHORT/TUBE TEST switch slowly through positions 1, 2, 3, 4, and 5 while watching SHORTS neon lamp and tapping tube. If SHORTS lamp glows steadily in any position or flashes when tube is tapped, tube is shorted and should not be tested further. NOTE, however, that some tubes have a note in the "NOTATIONS" column of the data book (6SL7, etc.) that a short indication on certain positions should be ignored. Also note that a momentary flash when rotating the SHORTS switch is normal and should be ignored. Multisection tubes need only one shorts test.

Quality test - This is a mutual conductance test. First do Shorts test. If tube passes:

First - Set L and R controls to settings shown in their respective columns.

Second - Set MICROMHOS to 3000

Third - Press the button shown in the "Press" column. BE SURE to press the correct button!

Fourth - Read quality of tube on the Red-?-Green scale, UNLESS the button pushed is the DIODE TEST button, or there is a note in the "Notations" column. Tubes tested with DIODE TEST are OK if they are to the right of "Diodes O.K." on the scale.

Fifth - If tube has more than one test listed, remove the tube, set switches and controls to settings in the second test, reinsert tube, and repeat above quality test steps. Shorts test does not have to be repeated.

Mutual Conductance - This test is identical to Quality test, except that results are given in micromhos instead of Red-?-Green scale. Only tubes with an entry in the "Micromhos" column should use this test. Diodes and rectifiers should be tested using the Quality test.

First - Set L control to "Gm" (60)

Second - Set R control to settings shown in the R column.

Third - Set MICROMHOS to appropriate range for reading shown in "Micromhos" column.

Fourth - Press the button shown in the "Press" column. BE SURE to press the correct button!

Fifth - Read mutual conductance on the appropriate scale of the meter.
Tubes tested with DIODE TEST are OK if they are to the right of "Diodes O.K." on the scale.

Fifth - If tube has more than one test listed, remove the tube, set switches and controls to settings in the second test (except L control, which stays at "Gm"), reinsert tube, and repeat above quality test steps. Shorts test does not have to be repeated.

Gas Test - Used only on amplifier tubes. In multisection tubes, gas test must be made on an amplifier section.

First - Perform Shorts and Quality tests.

Second - Set L control to "Gm" (60).

Third - Set MICROMHOS to 3000

Fourth - Hold down GAS NO. 1 button and adjust R control for reading of 100 micromhos on the 0-3000 scale. If reading cannot be brought down to 100 micromhos, set R control to 82.

Fifth - While holding down GAS NO. 1 button, press GAS NO.2 button. Meter pointer should not move upward more than 1 scale division - more than 1 division increase means a gassy tube.

Testing "Magic Eye" tubes

First - Turn on POWER and set LINE ADJUSTMENT as described above.

Second - Set FIL to 2.5 for 2E5, 6.3 for tubes with numbers beginning with 6.

Third - For 2E5, 6AB5, 6E5, 6G5, 6H5, 6N5, and 6U5, set A to 12 and B to 3. Insert tube. Press "AMPL TEST" button - eye should open. Release button, set B to 2, press "AMPL TEST" again - eye should close.

For 6AF6 and 6AD6 tubes, set A to 2 and B to 8. Insert tube. Press "AMPL TEST" button - eye #1 should open and eye #2 should close. Release buttton, set A to 3, press "AMPL TEST" again - eye #1 should close and eye #2 should open.

Hope this helps. Sorry to take so long to type this up! Any questions, just email.

73 de Jim, N2EY

Lots of things can be wrong. first off what are you using for an
antenna, what band(s) are you listening to, is the antenna cut for or
resonant at, that frequency. Check all tubes or better yet replace all
tubes in the front end. last, the screw under the needle is (a) zero
adjust. with no signal the meter should be adjusted carefully to zero.
Regards
Dave

Sob!

Time for it to go. All equpment is Pick Up in Sacramento, CA
weekends only-

1.ea M35ASR loaded with everything, perf, reperf, reader, kbrd, type,
full console case on sheppard casters. Excellent condition. beige
finish. with some paper and tape. 20 ma loop adapter and SMDs included.

1. ea M28ASR, mode 5 unit with dual head reader. LARP no longer inside
unit. 60 speed and 100 speed gears for typer, 100 speed gears on
reader. Case painted IBM Blue.. I did it and at the time I was glad I
did it, but now the old Western Union puke green would probably look
better. I used this unit for years when tty was still a roll your own
hobby.

1. ea. M28RO (New Unit) table model with gov motor.

1. ea M28 LPR reperf with three speed tranny (very cruddy, but worked
before it was stored in the black hole of whatever for 25 years.)

1 ea DEC LA 36 Decwriter, 120 cps upgraded, floor stand model, KSR,
serial interface, nice shape with an unopened box of fan fold wide
carriage paper.

1. KS TT100 page printer, works, KSR, ugly, 60 speed gears installed

The objective is to not send this gear to the scap heap. I realize the
value of this stuff is limited and I will make allowances accordingly.
I prefer that a ham take the gear and not some scrap dealer. I will
help load at my storage unit in Sacramento, CA on weekends. I would
perfer that someone take it all. The one that takes it all gets a pair
of collectable scopes, A Tek 511AD and a Dumont Big Thing Scope with
nice knobs and what else can I say--act promply and I'll also toss in
a restorable tek 545a with some kind of a plug in and a probe of some
sort.

Tnx for the read

Bob, KE6f

4176. Variac General Radio

Newsgroup: rec.radio.amateur.boatanchors

I have come into the possession of a General Radio Type W20 Variac. All without docs. Five connectors on the top labeled 1 to 5.
There is also " for common (ground) Line-Load Connection use terminal 2 or 4. It is rated 0-120 Volts 20 Amp.
Does any one know where I might get a copy of the docs or some advise on which contacts to use. It looks like I should apply line voltage to 1 and 5 ground to 3 and take my output off of 2 or 4 and ground. I sure hope someone out there has one of these beasts.

My friend is looking for a genuinely MINT 830S (gold model would be awesome!) with a MINT VFO230. He will consider a MINT 530S with some extras.

He has a rare Drake SPR4 receiver with every known extra in true MINT condition (he is very particular).
{note: the SPR4 noise blanker needs some tinkering, everything else has been peaked to perfection}

He also has an even more rare FS4 systhesized VFO with extras, also truly MINT.
{it even includes the crystal for the SPR4}

He is interested in outright sales of the Drakes or trades.

Asking $475. for the SPR-4, $375. for the FS4 ... or a very reasonable offer.

Please contact me at aa1fa@qsl.net or 603-894-1174

Hello!
This is an about early 1950's vintage 9" dia. 110 volt A.C. wall clock.
It looks good and works well, is some what noisy and runs warm as I guess
they all did (how soon we get accustomed to new technology).
It is marked
COPYRIGHT 1949
TIMING DEVICES CO. SALTSBERG, PENNA.

It also has some city names for times at various cities on a concentric
dial face.

This is a nice old clock for use or decor in a vintage or modern shack!

Email for more info.

>you guys have?

Hello Allen,

I honestly don't know how many tubes I have on hand. At least 1000, but probably much higher. They range from NIB beauties to dusty TV set pulls. All obtained for low, low prices - some outright gifts ("Come and get 'em - it's you or the dumpster"). Still have the very first tube I ever bought, 32 years ago.

>Any good ideas on how you store these things?

I sort them by type, ("6 volt 7 pin miniatures" "5 volt octal rectifiers" etc.) and try to have lots of little boxes with a few tubes in each. Storage is a BIG problem!

>Any good uses for a compactron, like maybe selling them as fishing floats?

AAAAAAAAGGGGGGGHHHHHH!!!!!! Don't even joke about such things! We'll be having nightmares for weeks!

Compactrons were used in several pieces of Heathkit ham gear in the '60s. The HW-16 used a 6GE5 in the final. The HW-12, '22, and '32 and their "A" models used some sort of Compactron final tube, as well. The SB-300 and SB-301 used a 6AV11(?) as well. There are also many projects using the 6T9. Most Compactrons are actually electrically equivalent to older tubes, or sections of older tubes. The 6GE5 mentoned above is actually electrically equivalent to the 6DQ6B. Lots of ways to use them!

>Do you find yourself digging around boxes of loose tubes at hamfests?

I dig through anything that's cheap enough. Or make a killer deal on the whole box.

>Have you ever bought old tube equipment that could never run again just to get the tubes that was in it?

Well, not just the tubes - the parts, too. Have acquired many hard to get parts by tearing down stuff that nobody wanted. Best deal this year: A pair of BC-221 chasses that had been modified almost beyond recognition. No hope of returning them to life as freqmeters, but as parts - wow! One had almost all of the parts gone, and holes drilled in odd spots - but that lovely tuning capacitor with its 100:1 precision gear drive was intact. The other had been converted into a low power 80 meter transmitter, with 2E26 final, a nice meter, several 2.5 mH National RF chokes, ceramic tube sockets, lots of other non-'221 parts, and another intact tuning capacitor. Both for $5.

Hi everyone,
I have for sale a 75A4 with the 270G-3 speaker,original
manual and the 3.1filter.The serial number is 4783.The cabinet has a
spot on the top rear corner about 2X6 inches where it was sanded and it
looks like it was going to be repainted.I was going to paint it myself
before but opted to sell it like it is and give somone else the
oppurtunity to fix it.The unit works well and the front panel is in
exellent condition.all the knobs are original.The dial has some slight
yellowing,but is not cracke.The Chassis is clean and there are no extra
holes in it or the cabinet.The cabinet for the speaker is perfect the
flocking may be thin and there are two spots about the size of a dime on
it.The manual is original and in good condition.I'll take the best offer
over $700.We can talk about the shipping.

Thanks,
Robert Ramirez

This was my first ham transmitter when I got on the air in 1966. Worked many states with it on CW. Did not have the AM modulator.

In article <365CE525.BBA@ix.netcom.com>, Chris <ck5@ix.netcom.com> wrote:

Now that I've got your attn, of course I mean dynamotor

Well I think I need one. It's a 12V in 300V +/- out 60ma thing for a BC923 fm rx. Has a base with a Jones plug.

Fair just sold out of these $10 things.

Could also use an FT237. That's thing tank radios bc603 (say chrome buttons) & bc604 sat in.

Tks for the read

Marty

MFJ Deluxe Power Sentry, Model MFJ-825.

It has two meters on its face, one for forward power, and the other for reflected power or SWR. It can be switched to measure average power, peak power, or SWR. It has 3 switchable modules installed, to measure forward power as follows:
HF:
200 or 2000 watts Full Scale
HF:
2 or 20 watts FS
VHF (50-175 Mhz)
20 or 200 watts FS.

This should cover just about all your station power measuring/testing needs, I would think!

It's black metal with chrome trim. It's ery accurate and in near-perfect cosmetic condition. It dates from c. 1987. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers, You get the manual with it.

The price is $125

Desperately seeking:

4- 40uf @ 450 (or better) WVDC

or:

1- 15-20 uf @ 1600 WVDC

These caps are used in a 10m linear amp, in the doubler circuit.
The size is of great concern; they must be axial; a tall
electrolytic will not fit in the chassis.

There is currently 3- 40uf @ 450v in series to meet the voltage
requirements. Any ideas concerning retrofit welcome.

Have tried several sources to no avail (EDI, MCM, Jayso, CTI,
more). It seems that high volt caps are BA these days.

Suggestions appreciated. Please e-mail as well as post; much
problems with ISP NG's lately.

TIA-

This is the forrunner of a newer model which encorporates cross needle
technonlogy and covers all the same frequencies and ranges. The newer model
sells for $85 and can often be found on sale at $10 or so off. Your price
is about $75 to $85 too high.

4222. "Small" Companies: Unilab-Rainbow, Whiteley-Stentorian

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-11-30 00:00:00 UTC
From: maestro@cix.co.uk
Message-ID: <73vaov$4dc$1@plutonium.compulink.co.uk>
Source record: 93701

I'd welcome any recollections about a small UK Company called Rainbow Radio; and another called Whiteley (Electrical?).

Rainbow were also known as "Unilab"; and Whiteleys used the "Stentorian" label.

I know that Rainbow made a "utility" Long and Medium Wave Domestic AC Mains Superhet during WW2. The label "utility" was always regarded as misleading; people thought it meant "cheap and therefore nasty" but it really meant "high quality with no frills" (as witness all the furniture still in vgc, with various attempts to hide the "utility" mark). I have not seem one in any collection.

I am sure they used valves from the nearby Philips factory in the Lancashire town of Blackburn.

Unilab were probably best known for making a "TV Converter" when the first Independent broadcasts started in the UK on 405 lines, around 175 MHz ("Band 3"). The converter mixed the signal down to around 45 MHz (Band 1) so that ordinary 405 line receivers could be used.

They also made signal-frequency boosters for shops, stores, and places where one aerial was used by many receivers.

My science teacher asked them for help (around 1953) with a 136 MHz radio telescope and they made a one-off converter for that. This probably started their interest in apparatus for school sciente teaching.

Although they still have a factory at Blackburn, I think they are now a subsidiary of Philip Harris Ltd.

It is their _earlier_ history I would like to study - say from the 1930s until about 1960. I am particularly interested in their domestic radio range, and projection television.

Does anyone have any of their literature I could please borrow to read (and occasionally to photocopy)?

I am also interested in Whiteley "Stentorian", of Mansfield. They still manufacture; and I believe they designed and built the emergency communications systems for the Channel Tunnel. However my interest, again, is in roughly 1935 to 1965. They also made "radio sonde" weather measuring responder-transmitters.

I'd be particularly pleased to hear from anyone who worked with either company during that time, as we probably have friends and contacts we share.

Most of all, are either company known at all outside the UK?

Thanks and 73,
Bill

Please,

The capacitors you need, both 450 V axials and 1 kV to 15 kV oil filled cans, are available through several suppliers of parts for old tube equipment, all of whom advertise in the Antique Radio Classifieds, of which a free sample is available on request. Their ads are in Nuts and Volts and most of the other electronic hobby magazines.

Regards, DLR c/o Topper

For Sale: Two RFI tight (tempest red/black rated).

Rack nr. 1 is a nominal 6 foot high unit, internal adjustable
standard 19 inch mounting rails. Full length doors front and back with
full RF gasget and copper flash and full length vertical aluminum
extruded locking handle that has an over center locking mechanism to
ensure the door is closed and RF tight. Both doors are done this way.
The cabinet is ventilated via RF gasgeted honeycomb air ports. This
unit is fininshed in a dark grey pebble finish with a off white pebble
finish on the doors. Unit is all welded steel construction and deep.
No extra holes. Been in storage for 22 years.
All welded steel construction. $150 pick up only Sacramento, CA

Rack nr. 2 is a nomimal 42 inches high, construction as above, but
only has front door. $100 pick up only Sacramento, CA

Thank you for the read

Bob, KE6F

4237. Re: C-Line vs. S-Line Opinions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: "Tom C. Brown, Jr." <mmc@netdoor.com>
Message-ID: <xH_82.2620$b53.13118@axe.netdoor.com>
Source record: 93565

Hi Paul-

Half of my station is Collins and the other half is Drake, and I use `em both regularly.....

To start off, Art Collins started out making transmitters and Bob Drake started out making receivers, and I think they each out did the other along those lines.

However, you're gonna get about the same power level [within a db or two] from either company's transmitter, and they both put out a top flight signal......so the real difference in "working a station through terrible conditions" probably amounts to the difference between the receivers.

I have worked lots of DX on both the Collins S-3B and the Drake C rigs, but I can tell you this: when I'm going after a tough one in a huge pileup, I light up the Drake every time.

The really big difference is "noise and interference management".

The 4-NB noise blanker in the Drake R-4C is incredibly good. I once worked a VK that was just barely above a really low noise floor, not even touching the S meter, and after thinking to myself how quiet the band was that night, I reached up and switched off the noise blanker as I was about to turn off the power and all of a sudden I saw an S8 hash level on the meter, with a roar coming from the phones! I was so surprised that I thought "did that noise just start?" and I switched the blanker back on and the noise totally vanished. I was [and am still] amazed.

The 75S-3B has no noise blanker.

The Drake passband tuning is second-to-none, as well. You can achieve a similar effect with the S-3B receiver by adjusting the BFO frequency and then offsetting the main tuning, but that's a two-hand operation, and the Drake's passband tuning is an effortless one-hand affair.

The Drake will hold more IF filters than the Collins and there is more mode/filter flexibility with the Drake.

The Drake has three AGC time constants while the Collins has two. One of `em is actually fast enough to help smooth out the flutter fade of polar path signals sometimes.....

Drake made a Frequency Synthesizer that makes the R-4C general coverage, and there is no such item for the Collins.

The Drake covers 160 meters with the addition of xtals without losing another band, while the Collins doesn't cover 160 meters at all.

In short, the Drake is a more aggressive DXing rig than the Collins.

But, when it comes to audio quality on the transmitted signal, quality of construction, longevity, durability, fit, finish & "feel" and all that sort of thing......a Collins transmitter has no equal. And Collins transmitters are just plain lots of fun to operate.

Hmmm.....I may have given myself an idea: A Collins 32S-3 and a Drake R-4C might be quite an interesting rig! May have to check that out one day.... :-)

The manual is correct. There is no practical advantage to adding a
second transformer. A good rule of voltage matching is: lower z
source to higher z load, ok. higher z source to lower z load, not ok

Source record: 93569

Hi John and others,

Painting is much like any other hobby. It takes time to learn and some equipment to do a good job. However, if you can find the right color in a spray can, buy the best you can afford and get with it.

I am told Wagner Power Painters are great for the house but not for the radio cabinet. They use a different application process. Air is the way to go for what you are trying to do. There are many different kinds of paint guns ranging from 79.95 to over 500.00. I suggest looking for a friend.

You will need airline regulators, dryers, and filters to do a good job. What you are trying is much like painting a car. In fact you might wish to check out the car painters in you area. Look for one that does detail and free hand work. He will have a small air brush that will be just right for the job your wanting to do.

Next to the right equipment, a clean, dust free work area is a must. All those little rough spots in you finished product is dust. Also, you will need a good quality of paint and thinner. Don't paint when it's too hot, too cold or too wet. All kinds of frustrating thing happen when you do. If this all sounds like a big project to you, your right. Doing a good job at painting requires a lot of stuffand effort.

Let me suggest that you find a color you like in a spray can. Make sure you get a couple of cans with the same lot number if possible and figure on spending around 5 bucks a can. Don't get the cheap stuff from Wally World. There won't be much difference in the paint but the nozzle on the can will be better on the higher priced paint. Also, get a good grade of paint thinner and a tack rag to clean the cabinet before you paint it.

Find a place where the dust is at a minimum. I try and do most of my painting outside when there is NOT any wind and take a garden hose and wet the ground around the area I will be working. Even the floor of the shop if you are inside. This cuts down on dust when your walking around. Use the thinner and tack rag to clean up the cabinet and area where you will be painting. Set the cabinet up on a stand or hang it from the ceiling and have a good time.

Remember to use light coats but, heavy enough to cover the metal. Be sure to let it dry the proper time before a second coat and do what ever the can says. If you need to sand it a little, do it and then use the tack rag and a small amount of thinner to clean it before the second coat. Do just what the can says and it will turn out good.

Hope this helps you and doesn't scare you off. Anyone that cares about his equipment and takes the time to learn how can re-paint a cabinet and do a great job. One last suggestion, try and use a semi gloss rather than a

gloss. It is much more forgiving.

Good luck,

Bill N5WO

4242. Re: C-Line vs. S-Line Opinions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: Lee Bahr <bahr521@earthlink.net>
Message-ID: <3664844D.981B9B9@earthlink.net>
Source record: 93570

Simple !!!! C-line works better. S-line looks better. C-line electronics are better. S-line uses better grade parts and has much better mechanical engineering. All in all, Drake wins electronically and Collins wins mechanically. Drake was a master of producing great results with little cost. Collins was a master of new technology and cost was not as great a factor in its design. Collins uses braided wire, Drake uses solid wire which was easier to wire but more delicate in repair. Collins could never figure out how to build a good alc, Drake could. Drake used inexpensive sweep tubes and Collins used more expensive 6146s. Collins put more bucks in the radio and Drake less. Both reflected this in their pricing. Collins cost more than Drake gear. The average ham could not afford Collins but he could afford Drake. The Drake electronically worked better. When you consider Drake repaired tube gear until a month ago, it was a better value. Even though Drake used less expensive parts, the stuff held up. It is still being used almost 50 years later. If you want to awe great mechanical engineering go for the Collins. All in all when you weigh longivity value and how well it works, Drake wins cost per dollar. If you value good looks and durability, Collins wins. I have many pieces of each and love all of them. It boils down to what you value. The criteria for judgement determines the winner. Both manufacturers went after a different market segment and both were very successful doing it. Drake had to make a living selling Drake ham equipment. Collins did not have to make a profit for a long time selling ham equipment with all his government contracts he filled. His ham equipment could be a loss leader to attract government contracts for many years. I love the Collins feel. They are pieces of art mechanically. And, I love the way Drake operates electronically. I'd like to see a piece of Japanese gear hold up to time like these two brands of gear. I couldn't even get parts for two Kenwood rigs I owned that were less than 5 years old. Also, when I run my older equipment I have fun and I don't have to have an operating manual on my table, either, to figure out how to program my micro processor. Of course, today's radios have more buttons and knobs per dollar and that is what counts, right? Lee Bahr w0vt

Source record: 93572

Nobody can tell you because DRAKE never put blue goop on their pilot lamps. Someone who worked on the radio must have done this. Drake used blue plastic lens material to blue the dial and the meters. The meters had the blue plastic slipped in in the shape of an "L" in the meter cage. The dial had the blue lens behind the white lens so when the radio was turned off you could not see blue. Both lenses for the meter and dial are still available from Drake. I bought some from them this week. The blue over time goes away from pilot lamp heat and must be replaced to restore the blue looking meter and dial. Hope this helps. Lee Bahr w0vt

Please,

You are right. In general, you apply your 120 V input to the extreme ends of the coil. Then put the neutral wire of the output to the low end of the coil, the end the wiper hits when the knob is CCW. The hot wire of the output goes to the variable tap.
The other two wires? Normally they are taps a little from either end of the coil. It you put the 120 V input hot on the high inside tap, the one closest to the high end of the coil, then you get an autotransformer effect, allowing you to get 130 V output with 120 V input. That's useful for overstressing equipment, and for testing things to UL/overheat requirements. The disadvantage is a bit less in power rating, because less wire to dissipate heat.

Regards, DLR c/o Topper

Hey folks,

I have started a website and ISP strictly for ham operators. The idea is to get hams to help keep up a website with information updated weekly and monthly. I would like to have all the cool stuff you find on the net in one website. News, mailing lists, callsign database, if its cool I want to put it on there.

I am also offering free e-mail addresses, web services for all ham operators. I am also offering local dial-up service for people in Oklahoma (numbers in Oklahoma City and Stillwater, OK)

Please go check out the site and get your free e-mail account
http://www.hamsnet.net

Thanks for your help

Any good fisherman knows that inorder to catch the really BIG ones you should use one of the matched pair of WE300B in the fancy cherry wood case as a bobber. The 1L6 is only good for crankbaits. I haven't seen a shad yet pass up a good 1L6 :)

I am pretty sure both Mouser and Digikey have 450 V axial and radial caps in
that range of values.

You won't find 1600 V large uF values anywhere as far as I know - at least
not for anything you could afford. :-)

Desperately seeking:

4- 40uf @ 450 (or better) WVDC

or:

1- 15-20 uf @ 1600 WVDC

These caps are used in a 10m linear amp, in the doubler circuit.
The size is of great concern; they must be axial; a tall
electrolytic will not fit in the chassis.

There is currently 3- 40uf @ 450v in series to meet the voltage
requirements. Any ideas concerning retrofit welcome.

Have tried several sources to no avail (EDI, MCM, Jayso, CTI,
more). It seems that high volt caps are BA these days.

Suggestions appreciated. Please e-mail as well as post; much
problems with ISP NG's lately.

TIA-

4269. WTT: Lots of Vintage Drake gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: Markus Thomerson <markust@lx.net>
Message-ID: <01be1ce6$8fef40f0$b56cddd0@mdt>
Source record: 93629
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello and thanks for reading this post. I have several pieces of Drake gear that I am
looking to TRADE only. I do not wish to piece this gear out at this time because of the
hassle, so please don't ask. Also I do not want to ship this gear, it is all to nice to have
the shipping comapny destroy it. All of the pieces are 9+ condition, unmodified and a non-smoker. I have the original manuals for all pieces except the SW4A (copy). The list is as follows:
1) R4 receiver, T4 reciter, MS4 speaker, AC4 power supply.
2) R4A receiver, T4X transmitter, MS4 speaker, AC4 power supply.
3) MN2000 antenna tuner.
4) C4 console with power strip and remote antenna switch.
5) SW4A shortwave receiver, MS4 speaker.
6) Spare R4A receiver, T4X transmitter, T4XB transmitter (all are parts units only)
7) Tubes, Tubes, Tubes, i.e. 14 NOS 6JB6A's, 12 NOS 12BY7A's, you get the picture.
8) Unused Drake logbooks, catalogs, "poop" sheets, knobs etc.
Also included are two pieces of non-Drake gear:
1) Hallicrafters HA-1 keyer.
2) Grand systems digital readout, will work with any 4 line gear (not TR series)

Now the deal. As I said above I am looking to TRADE all of this equipment and would be
interested in high end late model HF gear or possibly a complete Drake TR7 or TR7A station.

If you feel you must make a cash offer that is fine, but a trade offer will take precedence.
I am willing to meet someone a reasonable distance from Midland, TX to deliver the rigs if a
deal is made because I really don't want to ship all of this gear. Please email me with any
questions or you can call me if you wish @ 915-699-6165 after 6 PM CST. Thanks again for
reading this post, Markus.

4270. Sell/Trade: Racal "Syncal-30" HF manpack radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: ross@hypertools.com
Message-ID: <3663872c.12963152@news.willapabay.org>
Source record: 93630
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Will sell or trade:

RACAL Syncal 30 HF manpack radio package, including:
- a TRA-931X, working, nice looking, and unmodified
- a TRA-931P parts radio (complete but missing power wiring)
- 2 good battery packs
- whip antenna (not RACAL but made well & works fine)
- handset (not RACAL, an H-250 with RACAL connector added)
- remote control units, both 'local' & 'remote'
- battery charger, correct & working, runs on 12/24/110/220
- bound manual copies for both radios.

I'll sell the whole package for $1100 or may take a green phosphated
Steyr GB or a nice complete HK4 set as partial trade.

Hello, as promised I'd come through with more complete,
original, good to excellent condition Antique electronic
and audio catalogs/sales brochures.
All are as represented, ALL SALES FINAL on literature.
Prices below are firm, and INCLUDE SHIPPING to anywhere
in the lower 48 U.S. states. Others by quote. Some of
these catalogs have stuff YOU ONLY CAN DREAM ABOUT...
Thanks, first come, first served ! You will enjoy these.....
Please send your orders via Email to : Tubelit@aol.com
If you need TUBES, please respond to Tubecntral@aol.com
HAPPY HOLIDAYS TO ALL !!!
Regards, Joe Pratt

THIS IS WHAT IS HERE RIGHT NOW:

ADR audio catalog, looks like earlt-mid 70's, 7 pages, 5.00

ARRL callbook, foriegn edition, 1983, 10.00

ARRL callbook, US edition, 1984, 10.00

Audio warehouse catalog, Vol. ! Issue 2, looks like early-mid
70's, 8 pages, 5.00

Allied's supplement #133 to 1953 cat.#131, 48 pgs.
of the good stuff, tiny fold in one corner, but nice! 25.00

Allied's "festival of values" supplement # 182, 1958
100% complete, good shape 48 pgs, 20.00

Allied's winter sale catalog # 263, 1966, 89 pages in excellent shape,
includes all the Knight kits and order form, 25.00

The "Audio Exchange's audio fair 1955 edition, comes with extra
fold-out equipment flyers,nice condition! 8 pages plus 3 flyers, 10.00

"The care and feeding of power tetrodes" original mint condition,
Eitel McCollough's rare (these days) guide to running the big stuff!
Well illustrated, 25 pages, 29.00

Federated purchaser's 1956 catalog supplement for "High fidelity
sound equipment",a fold-out single page type, nice condition,
10.00 ea., have 2 identical in same condition!

Federated purchaser 1960 catalog , 303 pages in nice shape, but
page 1 has some writing, has small hole in the last 6 pages,
but real cool.. lists Genelex KT-66's for 3.50 ea.!!
Try getting that deal these days! 22.00

"Heathkits for 1955" catalog, nice shape except a couple small stains on cover,100% complete! 47 pages, 30.00

Heathkit 1956 fall flyer, near mint cond, 7 pages and order form, 15.00

"Heathkits for 1957" catalog, excellent save for a little stain on cover, 100% there, 55 pages, 30.00

"Heathkits for 1958", This is THE one! All the TX's are here! near mint cond, 57 pages, 32.00

Heathkit 1959 catalog, near mint, shows the W-5M kit for 59.75 !!! 100% complete, RARE....30.00

Heathkit 1961 catalog, 100% there in NICE shape, 66 pages, 25.00

Heath catalog,July, 1961, very nice cond. w/order form, 39 pages, 20.00

Heath catalog, Fall/winter 1961/62, Small tear on cover, and cover loose, but 99% there,missing order form, 99 pages, 20.00

Heath catalog, #810-50, 106 pages, very nice, 30.00

"Give a Heathkit" for Christmas, catalog supplement 80/31, Oct. 1962, 100% there, but cover is loose and worn, but OK looking,47 pages,15.00

H.W. Sams co. 1984 Photofact anual index, 208 pages, very nice, 19.00

H.W. Sams co. 1985 Photofact anual index, 216 pages, very nice, 19.00

Hudson Hi-fidelity catalog, 1958, 62 pages, all the goodies! great shape, 19.00

Key Electronics, Inc. 1963 audio discount cat# A-17, 20 pages, very nice shape and very interesting, 15.00

Lafayette Cat.# 740, 1974, 473 pgs. includes order forms, real nice,but missing a bit of writing on the spine, 100% there, 12.00

Lafayette Cat.# 743, 111 pages, cover a little loose, but nice, 100% there! 7.00

MusiCraft special flyer, icludes schematic for the 60 watt 6550 audio amp! Looks like 50's or early 60's, comes with free extra, different copy, 10.00

The NEW YORK TIMES, Sunday, March 15, 1959 Hi-Fi- stereo special section 10! RARE RARE RARE in fairly good shape, but yellowed, of course. 15 full size newspaper pages, has been folded since 1959, REAL COOL STUFF 20.00

Hello, I have the following Western Electric tubes in stock and ready
to go. All are NOS (new old stock) in the original boxes unless stated
otherwise. All are tested on the Hickok TV-7D/U to insure quality.
Where there is a used tube, I've provided the TV-7 readings as follows:
M= minimum acceptable for good tubes
T= this tube's readings.
These are all of the W.E. that I currently have in stock. I also have
a huge inventory of other types of NOS and TV-7 checked tubes. Inquire.
Shipping and optional insurance extra. Thanks, Read on.....
Joe Pratt
Tubecntral@aol.com

M= minimum on TV-7, T= This particular tube's reading

102F "tennis ball" triode, ONE with perfect getter, tests good,
M=25, T=25.... 75.00

313C, TWO @ 3.00 ea.
352A, may be used, but tests NOS, Triode M=16, T=29
Diodes, m=40, t=56,56....20.00

Jim: I remember your inspirational article in ER. Very FB.

I think you've hit on the link between the good old days and present
day ham radio. It is a connection available to most everyone:
homebrewing. While I wasn't there, I imagine that a big part of the
fun way-back-when was using and experimenting with homebrew stuff. As
you've demonstrated, that fun is still available.

Keep the soldering iron warm!

Source record: 93639
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

Hi folks;

I've recently dug a National NC-125 tube shortwave out of the closet. The manual I have indicates it was made in 1940. Aside from filter cap replacements, not much alignment has been done on the set.

I was curious about two things:

1) How does this set stack up against other Nationals of the period? Against other sets of the period?

2) How much good would an alignment do me? Some of those wax caps on the underside look ominous..

Thanks in advance.

4280. Balun use with longwire

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: pje@haystack.mit.edu
Message-ID: <7411is$h70$1@nnrp1.dejanews.com>
Source record: 93640
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Hi folks;
I'm trying to get a nice low-noise setup for a simple inverted L antenna before the snow flies here in MA. The inverted L will be fed to an old National tube shortwave through a 50 foot length of high-quality Belden RG-59 coax. I'm following John Doty's advice and using a 4:1 balun at the base of the antenna feeding the 75 ohm coax, as well as grounding the shield both at the antenna base and where the coax enters the house.

Here's my question: the National manual says that "antennas with impedances greater than or equal to 70 ohms are suitable; the impedance of the antenna terminal is approximately 300 ohms". From my electrical engineering training, I think "matched load" and so I want the antenna to look like 300 ohms to the receiver.

So do I (a) follow that impulse and put a SECOND 4:1 balun on the coax to bring the 75 ohms back to 300 ohms before feeding it to the screw terminals; or (b) just hook the coax directly to the input antenna terminals, because there is some other design trick that 1940's era receiver designers put in that makes doing such an impedance match a waste of time?

Thanks for the help.

From: mccrk@aol.com
Message-ID: <19981201105958.22766.00000527@ng18.aol.com>
Source record: 93643

The NC-125 was made around 1950, not 1940. It was a solid, medium-priced receiver--$149.50, as I recall, less speaker. I used one back in the early 50s and was very happy with it. On CW it has a built-in Select-O-Ject, which provides great selectivity. It's certainly worth aligning, if it needs alignment--and certainly worth re-capping.

As for how it stackes up against other receivers, I think it was fine. It was certainly better than the lower-priced NC-33 and NC-57. It was also the only receiver with a built-in Select-O-Ject. The calibration leaves a little to be desired, but with a 100khz calibrator you can interpolate down to a khz or two on the lower bands.

From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <741546vi1@eve.enteract.com>
Source record: 93644

Does anyone have any idea what the bluish-colored goop on the two #47 dial lamps in the R4-C is? My PTO lamp has this stuff worn off, and conseqently the backlight looks wrong. It's obviously used to somehow diffuse the light from the bulb. Any idea what a good substitute would be?

Thanks,

Paul WD8DKY

If you go to Drake's web site at http://www.rldrake.com, you will find they still sell the proper blue plastic inserts for the meter and dial originally used to give the blue color. Part nos. are 3460700 for the meter filter and 3460740 for the dial filter.

There is also a blue nail polish which supposedly works -- although I don't happen to know the appropriate brand/color and haven't tried it.

Source record: 93646

Thanks for the info, Grant. The blue plastic filters are in place and ok. It's the bulbs themselves that I am interested in.

The bulb over the s-meter has a bluish coating on the glass of the bulb itself. The lamp over the PTO dial has most of this coating rubbed off, and conseqently the backlight over the tuning dial doesn't look right.

I'll have to look into the nail polish idea for the bulb. There's something I've never shopped for! :^)

4290. C-Line vs. S-Line Opinions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <741a4c$5pc$1@eve.enteract.com>
Source record: 93650

Hello, all. I'd like to start a "religious" discussion on the performance of the Drake C-Line vs. the Collins S-Line (73S3/32S3). The Collins gear seems to be worth far more, and I'm guessing it's because of the name, and less because it outperforms the C-Line by leaps and bounds.

I've got limited experience with both, so I can't draw any conclusions myself yet. I would be interested in hearing from those who use them regularly (or have extensive past experience) which they believe is the better DX performer, and why.

I can draw one conclusion; both lines sound more pleasing to my ears; this isn't really quantifiable, but I find that I can listen to the C-Line for much longer without getting annoyed. Not so with the solid state gear I own (a Kenwood TS-870S in particular)...

Anyhow, thanks for any input-

Happy Holidays to all!

4294. Re: National NC-125 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19981201160229.01157.00000015@ng-cg1.aol.com>
Source record: 93654

Hi,
About your National, I am prejudiced in favor of Nationals, so there will be those that disagree with me. You will find that the wax caps should be replaced. Yes, it should be aligned and the i.f. cans may have gone south on you also. Bring it up very slowly on a Variac. As for performance, it's no Collins, but I am sure it will give any Hallicrafters or Hammarlund from the same time period a run for it's money. As per Moore's Communication Receivers 3rd edition, this is what you've got:
years:1950-1955-price: $149. Bands:4, .55-36 mhz. Filter:none Tubes: 11- 6sg7 rf, 6sb7y conv, 2 6sg7if, 6h6 det/avc/anl,6sl7 af1/bfo,6v6 af out, 6sl7 phase shift,6sl7 boost -rej. Remarks: built in select-o-ject. COOL!!
Theres a market for this set for sure. If you're in doubt, offer it up on this group and watch the feeding frenzy begin...
Kindest regards,
nc183d

4295. Cabinet painting...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: John <mstr-jl@swbell.net>
Message-ID: <5GZ82.4182$Qm1.19125@typhoon01.swbell.net>
Source record: 93655

I've got a boatanchor sitting here that I'd like to try my hand at repainting the cabinet, it's in terrible condition. I like the radio and will keep it for several years to come, so I'm not concerned about 'resale'...

I've tried my hand at it a couple of times, and wound up stripping the new paint job back off again... I tried using a Wagner Power Painter with the finest .6 nozzle (it still put the paint on like syrup - thick and gooey - no good), spray cans (no good - hard for me to control the volume for an even finish), and a few other things that I can't remember now...

Can anyone recommend the preferred method (equipment/technique) for repainting a cabinet and getting the nice, thin, enamel like finish that most rigs have on them?

And if that's not possible to the 'do-it-yourselfer' - what's the second best method?

Thanks for any assistance - here or email...

John

4296. Re: Johnson 104 spreader insulators

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-01 00:00:00 UTC
From: Bill Clarke <w2blc599@bigfoot.com>
Message-ID: <36646801.0@news3.ibm.net>
Source record: 93656
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

My newest spreaders are made of 1/2 thick Lexon cut into strips 1/2 inch wide cut to 6" lengths. I drill two holes in each end - one for the feedline and the other for the wrap that holds the feedline in place at each insulator.

These spreaders are heavier than the old Johnson jobs, but they work. If you want less weight - try using Lexon or Plexiglas tubing.

Sometimes you might get lucky at a plastics distributor and get scraps for free.

From: Bill Clarke <w2blc599@bigfoot.com>
Message-ID: <36646b44.0@news3.ibm.net>
Source record: 93657

This topic has to do with the question of "Quality Receive Audio" as subjectively defined by the user.

Just how do the Drake C-line and Collins S-line really shape up compared to something new and hot like the Yaesu 1000MP? Is all that black magic and DSP really needed? Or, is the end result only what we already had?

I no longer have a classic rig to listen to and compare. I sure would like to hear what others have to say.

To Email direct - please click below, but - I am sure there are others reading this thread looking for answers.

Message-ID: <36694156.141116444@netnews.worldnet.att.net>
Source record: 93513

Mint Drake 7-line station:

TR7 transceiver with All "A" mods, FA7 fan, 2300/1800/500/300 Hz filters, Noise Blanker, original operator's manual and orignal service manual (no copies);

PS7 power supply with FA7 fan and original operator's manual with schematic;

RV75 synthesized VFO with TR7 interface cable and original operator's manual with schematic.

MS7 speaker.

The TR7 is a "9+" and looks great; front panel and interior are immaculate. One minor (< 1/16" ding on top right chrome trim). The TR7 has the WARC band mods. The PS7 is a "9" with a few minor scratches on the front panel and top cover. Interior is real good. The RV75 is a "9++" inside and out. All items work great, all pilot lights work.

$1000, includes FEDEX freight anywhere in US.Shipped in original Drake boxes.

Will send digital pix or other info on request.

Illibronze company made the tins I have. Even using the proper paint it is
something of an art to get it to crinkle in a nice even texture. I find
forcing it with a heat gun allows you to get the effect you want without
smelling up the domestic oven.

John,

Canned spray paint works awfully well if you take the time to apply a number of thin coats. Rustoleum seems to be good. I have repainted old gear and new metalwork with pretty good success. I find that satin finish paints result in a more even finish than gloss. However, I've also had good luck spraying a coat of Krylon matte finish over gloss paint. Be sure to lightly sand the metalwork to rough it up and wipe it off well with mineral spirits before the first coat.

For some reason, I've had the best luck spraying and drying when the temperature is much lower than recommended on the can (I don't let winter get in the way of my projects!). Of course, this increased the amount of time needed to dry between coats.

Good luck,
Steve Robertson

Check out your local auto parts store. Sometimes motorcycle shops also carry the little spray cans. Our local PEP and Autozone stores sells the cans for around $3-4.00. Gallon cans for paint spraying are also available from a supplier in MD. If your project area is large, getting an even finish takes practice. The cans work OK on small objects such as knobs and little panels. One or more hair blower heat guns are recommended to accelerate the crackle process.

I'm building the Doty-inspired inverted L and would like to hear about the
results you get. (I'm not an electronically savvy listener.) Switching from an
end-fed antenna to the inverted L, without the coupling transformer and coax,
yielded a lot of 120Hz power-line hash. I'm also dealing with a 50kw AM
transmitter 1/2 mile away, so it looks like I'm trapped into learning something
about traps.

FOR SALE: Hallicrafters HT-37 SSB/CW/AM transmitter 80-10 meters (no WARC bands) Boatanchor (80 lb.) - I will not ship it. Includes hand mic and the 11-pin control plug for hooking up a t/r switch with a receiver. Original manual included. All original knobs, etc. and in good operating condition - usual wear and tear for a rig this old. Has been modified for push-to-talk mic. Not "mint" but it works! Pick-up only in Houston, Texas. Make me an offer. Reply by e-mail to jhardin@hal-pc.org

"Peacock Blue" is a *very* close match to the original filter color.
Apparently, it is a standard cosmetic hue, so any brand will work. I used
it in my TR-4, and it is almost indistinguishable.

Spray painting is not a science - it is an art.

You need to practice a long time to find out what works well and what doesn't - there is no ABC method of spray-painting. After you get all the correct equipment and paint (and reducers, etc. etc.) you can still do a crappy job until you practice enough to get it right.

If you want a good job and don't relish the idea of learning the hard way, buy the paint in quarts from R&R designs and take it to a local paint body shop. They can do a great job the first time.

Contact Robert at R&R Designs - 1-800-372-4287. Pints are $12.95 and quarts are $19.95 - all the way up to 55 gal drums - he has paint to match all the equipment.

Hope this helps.

Nice clean HW-101, clean in and out, a few light scratches on the top,
panel is perfect, all knobs are original and exc, the HP-23B
looks like new. Both come with original manuals.
This tranceiver has been stored for the last 13 years, I bought
it from the estate. I have powered it up [very slowly] with a Variac.
Receives well on all bands, filters work well--I have not tried it on
transmit.
Looking for $175 for the pair w/manuals and the connecting cord.
$200 if you want the nice Dukane PTT table mike that came with it. Plus
shipping of your choice.
Also have a clean HF-102 Wattmeter, untested but with manual $35

Thanks, Craig

One of the tricks I learned from an aircraft electronics overhaul company was to pre-heat the part to be painted, then apply the paint. In doing this, the volatile is dried more quickly and one can apply a heavier coat, initially. Then bake it at about 150 deg. for about 20 mins. This brings out a more uniform wrinkle. Yeah.. I use the oven...but when its all over, I have to run it up to the max for about 20 mins. to "clear the air"... hi hi

A friend of mine is selling a Collins 51S-1 receiver. Mechanically, the receiver is in excellent shape. Appearance is an 8 out of ten. Receiver seems to work well except for the usual pop and click in volume controls/switches after years of storage.

The only modification we can see is that a round hole has been notched out on the back panel. No other mods are visible.

My friend is asking for offers over $ 1100.00 for the receiver. I would be most happy to send JPG photos of the unit by return email.

How much ripple should there be on a 750Vdc Final plate voltage supply?
This is for a SSB/CW rig and the final tube is an 6kd6. The receive mode
voltage and ripple is 725v @ 2v pp ripple, when transmitting a cw signal
the voltage drops to 650vdc and ripple climes to 50vpp. It uses a full
wave bridge with an 80mF electrolytic cap. I tried replacing the 80mF
cap with the same results.
Is this common?

How about a Ford spark coil and a one tube regenerative receiver using a 53 or half a 19 dual triode, can't remember which, around 1930.

A friend and I actually used these state-of-the-art setups to communicate over the 1/4 mile between our houses. But our range was much greater than that, we found out. A legitimate ham about 5 miles away heard us and told us that we not only had the strongest signal he had ever heard but we had it from one end of his dial to the other. Fortunately, he was very friendly and invited us over to see how things should be done; and when he showed us how he could roast hot-dogs in his tank coil, I was hooked.

I built an AM broadcast band radio using 3 compactrons. See my web page
http://www.netcom.com/~wa2ise for the clickable link, or IIRC
http://www.netcom.com/~wa2ise/radios/compAA5.html

Many compactron dual pentodes had high transconductance values, good for
high gain in IF strips. Used a horizontal output tube as an audio output
stage, worked quite well. Damper diodes make for good rectifiers for
power supplies.

4354. Johnson Ranger I - Plate Circuit RF Choke

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-02 00:00:00 UTC
From: davek2dp@aol.com
Message-ID: <19981202013021.10284.00000992@ng10.aol.com>
Source record: 93596

A friend of mine has a Ranger I with a bad plate choke. however, he claims that the Johnson manual gives neither the value of the choke nor does the schematic indicate a value. since I have not seen the xmtr nor the paperwork, I can't help him. However, the choke is identified as L1 (RFC 1). Does anyone know the value of this choke or now a substitute part number.

Your help would be sincerely appreciated. The gentlemen trying to fix the rig is AA0TC, Les, who is home bound and retired.

thanks & 73,
Dave, K2DP, St. Louis

4355. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <742neb$fhp@news.Hawaii.Edu>
Source record: 93597
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6OO
(rec.radio.amateur working-group)
```

Hi Dave
On the Ranger 11 which should be the same it is 1 MH.
That's one MH. The Ranger manual shows no reference, but the Ranger 11
does. 73 Chris VE3NGW/W4 Florida

4357. Re: Balun use with longwire

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-02 00:00:00 UTC
From: sawbux@aol.com
Message-ID: <19981202015813.12454.00000693@ng-cr1.aol.com>
Source record: 93599

If you want to connect to the 300 ohm input terminals to the receiver, why not just use 300 ohm TV twin lead? It should have lower loss than the coax? If you connect one lead of the twin lead to the horizontal wire and leave the other one unconnected you'll have a Zepp antenna.

Are you using the receiver to receive any particular band, or just for SW listening?

If you want a particular band, you'll have to cut the ant. length to a resonant wavelength of the band of interest to get an optimum match.

If you want to receive a wide range of frequencies, them it may be worth your while to build an antenna matcher, Pi or Tee type.

In most cases, unless you are really serious about pulling out the weak ones, just connecting what ever wire (the longer the better) to your receiver will do.

my 2 cents worth!
Steve

4362. AN/GLQ-2 RT-260 Information wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-02 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@digital.com>
Message-ID: <01be1dcf$a5750ce0$3e70c610@utovandongen2.uto.dec.com>
Source record: 93604

Hello,

I'm looking for information regarding a AN/GLQ-2 RT-260 radio installation. I'm offered one and want to know if it is an interesting boatanchor or not. I'm told it is a HF set 2 to 20 MHz, HF output 1 Watt, 115 volt power supply and a weight of 70 kilo. It is dated 1955. From the AN code it is a land based, countermeasure transmitter/receiver. I find the combination of 1 watt output compared to the weight of 70 kilo a bit strange. All information is welcome.

While theory says that you should have a second balun at the receiver,I
don't think you'll notice much difference with connecting the coax
directly to the antenna input. The insertion loss through a second balun
might be similar to the impedance mismatch of the direct coax input. JW

4374. RFI: WWII Tropicalising finish

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-03 00:00:00 UTC
From: C.Wright@dera.gov.uk
Message-ID: <745m3r$js5$1@trog.dra.hmg.gb>
Source record: 93467

Greeting from the UK.

Some months ago I aquired an unmodified National Company HRO receiver - a "variation 2" with 2.5V valves (tubes). It had a number of coil packs with it, some of which were ink-stamped with a capital letter T in a circle. This was accompanied by the coil shields being coated with a varnish-like material, and another stamping indicated that they had been tropicalised, together with a date, mostly Feb 45.

It is quite noticeable that these coils packs, er, smell, which I put down to this varnish.

What actually was it? Did it contain any toxic/harmful chemicals or other material? Is it better to leave it in place or get rid of it? If so, how?

Any information gratefully received, but please post replies rather than e-mail.

Thanks in advance.

The stuff on them was known as "MFP", and you may see that stamped someplace on the radio. MFP means, Moisture and Fungus Proofing. You are correct, by modern standards both the chemicals used, especially the fungicide, and the volatile are not good (read: toxic) for you. The best way to clean the METAL parts is to use MEK (methol-ethyl-keytone), which is also baaaad stuff! Takes fire to fight fire. Don't get the MEK on any of the non-metal parts as this stuff will dissolve anything and is absorbed into the skin like nothing else!. I'm also not sure if you can buy MEK in the UK. Here, in the US, one can obtain it but not from normal "consumer" sources. Rather, one has to go the industrial route. Any help?

The 6AR8 is similar, but may have different pin-outs. Find an old GE tube
manual from the late '50s, early '60s.

4378. TenTec 229 Full Power antenna tuner FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-03 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <9nv92.8$hQ3.64888@newshog.newsread.com>
Source record: 93471
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,alt.ham-radio.hf,alt.ham-radio.marketplace,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

For Sale:

Ten-Tec 229 antenna tuner, includes balun for balanced line. Has roller inductor, so will match almost any antenna, 160 through 10 meters. Good for full legal power. Also has wattmeter, and 4 position antenna switch. Great condition. With manual for $ 225 plus shipping from Florida.

E-Mail to W8EK@usa.net
Other items at http://www.gnv.fdt.net/~kenmar

Thanks.

73,

Ken, W8EK

Looking for a few RACAL 6790/GM receivers- physically complete but in need of repair. Reasonable expectations only please! (These units sell from $600-900 in good-to-excellent condition and are quite expensive to repair.) I also have a Yaesu FT-840/FP-800/FM-747 to trade.

Travis -

It's hard to put a value on something like that because it would be
valuable only to someone with a 600 who needs a coil set. The best way
to find its value would be to auction it on eBay.

If it is toxic, why not just recoat the treated areas with a clear spray? In other words, cover it with something that isn't toxic? Two clear sprays come to mind: Krylon Clear and Minwax Polyurethane Varnish. Of course, you would have to be careful to protect the contact areas, etc but it seems to me that covering the stuff would be much easier than removing it.

Good luck,

Bill

Owing to a form of as yet undiagnosed insanity I have decided to start a rest home for RA 17's and there associated parts. That doesn't mean to say I'm going to start running around buying everyone that comes my way, what I'm looking for are those sets that you've been meaning to throw away but haven't had the heart, working or not, they are after all still good sets and do get sold from time to time. I will however consider reasonable prices and please keep in mind that I live in Somerset so collection is going to be an important factor. The sets will not be for re-sale even as spares so don't worry about someone cashing in on your generosity, easy for me to say but true, once I've got em nobody's getting em off me, I may consider passing on parts to other needy soles foc apart from postage, some bits could be heavy. Please email me with the details of what you've got and where you are. Is anyone already doing this ?

Looking for a 3-section can-type filter cap:
40/40/40 uF @ 350/350/350 VDC or higher
Must be no taller than 3" or it won't fit
Insulated or common negative are fine.

Anyone have one in their stash? I know I
can buy one from any of a number of radio
parts catalogs, at a cost of more than the
radio I'm fixing is worth!

I own both the R-4A and the R-4C. The R-4B and R-4A sound wonderful -
better than a *STOCK* R-4C. However due to the L/C IF filtering, the
A and B are not as selective as the C.

I operate mostly cw, and the C-Line is my personal favorite. My
modern gear usually sits for the same reasons Paul mentioned, I can
listen to the Drakes for hours without fatigue. I also like the
ability to monitor my own transmitted signal which is possilbe on the
A/B/C-Line by placing a pot across the mute line cable and adjusting
it during transmit so the receiver mutes just enough to avoid
overload. Makes a nice elegant transition between transmit and
receive.

Tom, AE5I's comparision between the C-Line and the S-Line is the best
I've ever read. And yes Tom, "Collins transmitters are just plain
lots of fun to operate"......especially the broadcast rigs!

Hi All,
I get a kick out of the use of the word "radio" to describe what I always thought hams called a "rig". Seems that in recent years, the word "radio" has become common to use as a description for a transmitter, receiver, or transceiver. This is probably due to the increasingly common use of a single "out of the box" radio appliance for the entire ham station. I notice the marketing hype in the mags and even the equipment "reviews" use the term 'radio'. I've always used the word "radio" to mean, as it once did in universally in ham radio, strictly a BC (BroadCast) receiver.
My first rig was a 6V6 tri-tet oscillator, exactly as described in the Dec 1946 issue of QST, except that I built it in March of '55 from an article in "How to Become a Radio Amateur" of the same year. This rig, and a beaten-up and mangled S20R receiver which I found in a hock shop in L.A., enabled me to fill my log book with many many stations all over

the USA, Hawaii, Cuba and Canal Zone on 40 meters, using a 1/4 wave ground plane made of water pipe sitting on a Coke bottle insulator. I still have the XMTR and RCVR today, and they work. About 7 watts out, if carefully tweaked and loaded to whatever antenna you have. The power supply was a sawed-off power supply end of an old BC receiver chassis, a common practice at that time. Perfect novice rig, and I daresay even today it is true.
If one were to build a simple DC, or regenerative, or better yet, a DC phasing-type receiver, coupled with a simple rig like this XMTR, either built with a tube or solid state (either way it is a simple rig) it serves as an excellent starting and cost-effective CW rig today. I know; I use mine on the air. Good rigs all sound the same on the other end, but the $$ spent varies enormously. One simply makes his choices.

73,
Don

Hello Bill,

That setup is still in use. It has undergone some modifications - the audio system was improved, the main VFO improved and recalibrated, and a second "fifty cent filter" installed. Worked 574 stations in 76 sections in the November SS, in about 21 hours. Not too shabby for 100 watts out, and modest antennas. A product detector bypass capacitor went bad about 18 hours into the contest, so had to take a half hour off to fix it.

> I think you've hit on the link between the good old days and present

> homebrewing. While I wasn't there, I imagine that a big part of the
> fun way-back-when was using and experimenting with homebrew stuff. As
> you've demonstrated, that fun is still available.

If anything, it's more available today than ever before. Certain parts are hard to get, and others are expensive, but there's all sorts of stuff out there for pennies. The trouble is that too many hams have the mindset that equipment has to be "state of the art" (whatever that is) to work well, and that home fabrication of anything is not practical anymore.

Saw your article on the "Mighty Midget" in ER - really ingenious "recycling" of parts! That's the real key to homebrewing - getting a good stock of parts, and then designing around them.

In the bad old days, one could just pick up an Allied or Newark catalog and order all of the parts needed to build almost anything. But it wasn't cheap! Even 40+ years ago, the total cost of new parts for most projects exceeded the cost of an equivalent kit, and sometimes even of a wired unit. The trick, of course, is to use parts from sources other than the conventional ones.

I've heard you many times on 75 - always a good signal. I may actually have to build a 'phone rig to join the gang!
>

Depending on your application, a 125(140V) Variac may be more economical and just as (or even more) effective than a 240V model.
Unless you need to sweep from 0-250V, the 125V model will allow sweeping over the range of 125-250V, and a 20A unit will be about 1/2 the mass and have less impedance.
We have seen serious degredation of the waveform (and output voltage) when using 240V 30A variacs to power 3kW non-power-factor-corrected equipment.

A friend of mine is selling a Collins 51S-1 receiver. Mechanically, the receiver is in excellent shape. Appearance is an 8 out of ten. Receiver seems to work well except for the usual pop and click in volume controls/switches after years of storage.

The only modification we can see is that a round hole has been notched out on the back panel. No other mods are visible.

My friend is asking for offers over $ 1100.00 for the receiver. I would be most happy to send JPG photos of the unit by return email.

Source record: 93505

Hi all,

Recently acquired a Tempo One with separate power supply/speaker that has the strange habit of blowing fuses when you turn on the radio.

I happen to have another power supply and cable that I tried that on the radio and everything works fine - the connection cable check out fine also - so the problem is in the power supply.

A quick 'cursory' inspection of the supply failed to locate any obvious flaws (broken wires, cold solder joints, etc...).

My nephew and I are new at working on equipment and learning as we go - we're very respectful of the voltages involved. Any help in steering us to possible causes would be appreciated.

Here or Email is fine - thanks.

John

Colin Wright wrote in message <745m3r$js5$1@trog.dra.hmg.gb> about MFP coatings.

>What actually was it? Did it contain any toxic/harmful chemicals or
>other material? Is it better to leave it in place or get rid of it? If
>so, how?

The military specifications are still available but new moisture and fungus proofing coatings could not be used today under our present environmental restriction. The antifungal agent is the worst culprit in the mix: copper naphthnate. In some early compositions mercury compounds were used too.

It is probably better to leave it in place than trying to get it off. Its main ingredient was an alkyd varnish and as such, once cured, it will no longer dissolve in most solvents. Unless it is flaking off and the particles are being swallowed or inhaled, it would be best to leave it alone. If you get any on your hands while working on the radio, remember to wash them thoroughly before you eat. There is not a lot of danger of getting the cured varnish on your hands. If you are worried, spray the existing coating with a thin coat of clear acrylic such as Krylon.

If you restore older military equipment and want your repairs to match the original MFP finish, use some urethane varnish to which has been added a little fluorescent dye to get the proper yellow color.
The easy way to get this is to find an old, dried out, Hi-Lighter pen. Break it apart and take the felt pad out. Soak this in acetone for a few minutes to extract some of the dye. The colored acetone may be added to the urethane varnish to match the original color. This procedure is for the spar type varnishes, not the new water based ones. Allow the varnish to cure overnight before applying power again.

Hallicrafters HT-32A minor nicks and cosmetics 9.0? Asking $195. picked
up

OR, $375. for the pair, picked up.

Both include manuals. Both were represented as working fine, both look as
though
that is a reasonable representation. I don't have the room to set them up
and test
them ... these are monsters! :-)

I am in Windham, NH (between Nashua and Salem). I am willing to meet
within a reasonable distance and have family in the Worcester, MA area if
that is a good meeting place.

Will consider shipping, though that is extra on these heavyweights!

aa1fa@qsl.net or 603-894-1174

Thanks & 73,
~~~

4420. WTB: National XB-16 Coil Jack Bar

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-03 00:00:00 UTC
From: J-MarCom <jmar.com@cwix.com>
Message-ID: <3665FAD0.D41AC771@cwix.com>
Source record: 93557

Looking for a National XB-16 jack bar used with National's AR-16 transmitt coils. These coils were used for low power applications and the coils and the XB-16 jack appear in National ads of the 40s. Any help or places to look would be appreciated.

Source record: 93560

A major difference between the Drake C- and Collins S-line is the tuning increment. The Collins tunes in 200 kHz increments while the Drake covers most ham bands in one range. 200 kHz is ok for cw, but I like to tune through the phone bands from one end to the other in one full sweep.

With the Collins, I have to switch band segments and end up tuning upward then downward. On 15 meters when I sweep upward from 21.2 to 21.4, then select the next range, I end up on 21.6 and have to tune down 150 kHz to get back in the band. This may be trivial to some, but it has bothered me for 20 years.

4427. Military Code Practice Set w/10 Keys for Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-04 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <747oc9$9r0$1@nnrp1.dejanews.com>
Source record: 93415

Guys -

I have a AN/GSC-T1 for trade. This is a military code practice set for a group of up to 10 radio students. Mine has all 10 J-37 telegraph keys with it which is very uncommon. As you can see from the accompanying photo, one of the keys is missing the connecting cord but everything is in very good shape. I've never tested the oscillator but will try to do so this evening. I need something with a smaller "footprint" because I've run out of room to store this. I would prefer to have a bug. If you have a bug that you would be willing to trade for this, please let me know. I'm particularly interested in older Vibroplexes but would be happy to consider any make or model. A photo of this set can be seen at:

http://home.stlnet.com/~keymaster/codeset.jpg

I have more photos if you need something with more detail.

Have a nice week!

Derek

$150 shipped to cont. U.S.

According to the previous (original) owner it was purchased new and never
used, and there is no visible reason to doubt that.
Comes with original manual, schematic, and special cable.
One minor approx. 1 inch scratch on bottom, original plastic still on front
panel (plastic is yellowed from age and possibly nicotine).
Dusty inside from sitting.
This transverter looks very good and original, but I have never
fired it up (it gets it's power from the hf rig, which I don't have).

Price is $175 shipped to cont. U.S.

Let me know if you have more questions!

Thanks and 73, Donzil

Hi gang,

I am in the process to adopt a nice Hammarlund HX-50 who needed a good home (thanks, Rod!). I have not too much info about this transmitter (just an ad in an old 1965 ARRL Handbook) so I would like to get more info and your comments and hints about using and taking care of it, as I have promissed to give it a good home :-).

Thanks for your help!

Best regards.

This has been an interesting thread. A reoccurring complaint in these newsgroups has been that new hams use much commercial equipment these days. It appears that most of the old timers that posted about their first rig here were also using mostly commercial equipment. The more things change the more they stay the same...

Jose: This radio was designed as an exciter for the HXL-1 Amp. The matching starion was the HQ-170, HX-50 and HXL-1 Amp. The HX-50 is a low power 80-10 CW/SSB and maybe AM. I think that the final is a sweep tube, If so be careful on the tune up. The rig only runs about 45 watts. Good Luck: Larry WA2PZI

That's true, but there's another side to the story... You might of bought commercial equipment then, but you also modified the hec out of it for improvement. The emphasis wasn't on just the means to communicate with another station, it was to adjust your equipment, improve stability, experiment, and sound good. If you had the tools to do the machining, you probably built a lot from scratch.

Many amateurs nowadays have never wound a coil or used a soldering iron. They just buy the rice box, buy the coax (with the connectors pre-attached), buy the antenna, and plug it all in. If they want to change their sound they buy a new mic (as long as the manufacturer has one that comes with the right rice box connector). It's all telephone quality (300 Hz- 3 KHz) audio. No challenge.

Like most things these days... More convenient, but somehow not as good.

Al

Source record: 93434
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Sam Taylor writes,
The BEST low noise antenna for shortwave is
a CLOSED LOOP
Draw a square on a piece of paper.
somewhere on that square put an X somewhere on
your outline.
You now have plans for your closed loop
to figure out the size use
Operating frequency/(divided by) 472
where the X is put an insulator
feed with 300 ohm twin lead
OR
go to Radio Shack and get a TV matching Transformer
as it is 75 ohm to 300 ohm
Now This is very IMPORTANT
go to a hardware store and get 2 twenty foot
lengths of 1/2 inch copper HARD DRAWN
Copper Pipe 3/4 if they dont have 1/2
cut them in 3 equal size lengths
drive them into the Ground 2 and 1/2 feet apart
now get an OLD run of RG-8 coax
carefully remove the outer insulating plastic
then carefully remove the braided copper shield
Attach the Braided shield to your Ground rods by
a hose clamp to each gronding Rod without
cutting it
solder each ground rod at the steel hose clamp
with ROSIN CORE SOLDER!
now take the remaing insulated center conductor
and attach it to the nearest ground rod (preferably
the center ground rod,by another steel hose clamp.
attach the other end to your radio ,at terminal G
final step Solder your ground wire to the Ground
rod at the hose clamp with ROSIN CORE SOLDER

The bug-a-boo about all of your impedance assumptions
is based on the fact that the antenna will present a low-impedance
only at odd multiples of
its quarter wavelength resonance points.
If the antenna is a halfwave at a given frequency, you may find
the capacitance of 50 ohm cable makes it act more like an antenuator
than a true transmission line. Personally, I would use 300 or 600 ohm
twinlead between a receiver and non-resonant antenna.

I'm in need of a Tempo One Aux. plug. It's the plug that fits into the back of the rig in the VFO socket when you're not using the external VFO.

If you have one to spare, I'll be happy to buy it from you.

Let me know? Email please...

Thanks,

John

That's also true. But first, todays equipment doesn't allow mods very easily. I could remove the parts from my old DX20 but I can't even see the parts on my TS870. Second, modern rigs don't drift and chirp or cause key clicks like the old commercial rigs did so no mods are needed. I satisfy my mod urges by buying broken boat anchors at swap meets, but I don't expect modern hams to learn ancient technologies to do this. For most of them it's building antennas or weekend projects, unless they're in the electronics biz. In this I would agree with you, times are a changing....

I have acquired an "as new" HM-9 WATTMETER, not a scratch, ding or rub on it. This appears to match the HW-9 QRP rig. No manual. I have no idea of the worth of this little beauty, so I will entertain offers. I estimate $5.00 to properly package and ship anywhere CONUS.

> thanks again
> John D. Farr

John,
For an instrument that's that old, I'd doubt you'd find much data. I suggest you buy a few short lengths of various thermocouple wire pairs, twist one end together and dunk it into the ice bath. See which one reads zero or close to it.
That would work for a thermometer, but for a pyrometer a similar experiment might also work.
The OMEGA company prints great catalogs not only because they show their products off, but because they contain some fantastic reference whizdumb. I would guess they have a web site where you could either access the appropriate T/V table or order the Temperature catalog. If you choose the latter you will be pleasantly surprised with the great book you just got for FREE!
In the book you will find detailed info to determine what type TC your instrument is designed for. You will also need a container of ice & water, a bunch to TCs to test and a DC standard or some source of variable DC with an accurate DC millivoltmeter to set it up with.
Unfortunately, my OMEGA catalogs are all in the lab and it's friday night.
If you care to give me some cardinal point on your pyrometer scale via email, I'd be more than happy to look up several voltages from various tables for you.
You'll still have to procure the above mentioned articles, but you won't have to wait for your book to arrive.
Let me know if this helped or hindered.

I bought 2 Multi-Elmac items from an auction, just because I like Elmacs. One is just a 6V vibrator supply. Need some old-timer with more knowledge than mine to identify the other one.
A case about half the size of an AF-67. The data plate says " MODEL RP Style K. Has an AC cord, 1 amp fuse, porcelin HV terminal, Headset jack, and a phenolic strip labelled " A G R '.
Inside is a power xfmr, audio xfmr??, electrolytic can, 5 tubes. 6AL5, 6X4, 6AB4, 6J6, 6BA8. A Relay, a plug in type, encased coil?? with tuneable slug, and labelled 6 KQ. . Lots of caps and resistors, and a couple of under chassis adj. coils.
No tuning device. A label does say " This receiver complies with FCC regs. etc."
Very pretty boat anchor---can any tell me what else it was used for?
Thanks. James W5LWU

4461. Re: What radios did you start out with?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-05 00:00:00 UTC

Source record: 93364

My first receiver was a home-brew type 49 tube regen rcvr (1938). When I got my ticket in 1939, from money I had saved, I bought a Howard 430 for $32, new. Still have it and although rusty in spots, still works on all bands thru 32MHz. After WWII bought a Hammarlund 129X.

First rig was a 6A6 PP osc with all of 6 watts input. I lived on an orange ranch, so had a fullwave end-fed zepp on 40 mtrs. Worked 3 continents with it before "upgrading" to a 6L6 osc with 20 watts input!

Much has changed since then. My call for one, which was an original W6SCO, changed to W6JN in 1996.

Still build a few things, antennas mostly, but it's hard to find parts for ham rigs any more.

73,

John, W6JN

FS: WE 51S1. $900 plus ups conus. Works well, no dings or dents, All knobs are there and unbroken, PTO could use an endpoint adjustment, and the case has been re-painted (not a bad job--but not original). Trim ring (not repainted) has a few scratches and minor nicks. Front panel (pebble gray area) has a couple of shiny spots just below the AF gain Control and the RF gain Control. Interior is in good shape with some dust, no corrosion. Has the tall feet on the front. I have a third generation copy of the manual and yes, it comes with a power cord.

Thank you for the read es 73

From: Greg Englert <englertgl@pad-uky.campus.mci.net>
Message-ID: <74cmf4$6qk$1@news.campus.mci.net>
Source record: 93384

I have come across a Vibroplex "Lightning Bug" that is in really nice shape. It is serial no. 152916 and is all Chrome with the Black Wrinkle Finish Base. A definite 9.5 condition. I have no idea what value it has (but don't say $5). Anyway, I would really appreciate any input as to fair value on this unit. Thanks in advance for reading and any information you might have.

73, Greg KY4A

E.F. Johnson did not make any receivers for the amateur market. Good AM transmitters are the Viking I and II, the Ranger, and the Valiant. Viking I's and II's can be had for about $200 each, and the accompanying VFO, the model 122 goes for about $75-$100. The Ranger will go for from $250 to $350 (depending on condition) and the Valiant (which I have 2 of) goes for about $400 for a very good one. Goes luck with your search. de Jeep - K3HVG

Source record: 93389

They're not really heavy enough to be boat anchors, but for all I know
hollow state digital electronics might be even rarer these days...

I picked up a trio of Hewlett-Packard AC-4K decade counter modules at the
Greensborough Hamfest today. They have a Boroughs NIXIE tube on the front
three 5963's and a 6U8A on the back, and two 12-pin tube-style connectors on
the bottom.

I'd love to get them working and hooked up to do somthing. If anyone has
any data sheets or knows where to find information related to these, I'd
very much appreciate a copy or a pointer.

73's
Steve

wrote:

>Anyone know the address for subscribing/unsubscribing to the the
>glowbugs reflector?
>

Sure: Send an e-mail to majordomo@piobaire.mines.uidaho.edu
and type the following in the area where you normally write the
message:
subscribe glowbugs

Don't put anything in the subject area.

There are many other lists or reflectors
http://www.ac6v.com/pageae.html lists them. Boat Anchors (Old
time ham radio) is another good list. Glowbugs gets a little more into
operating (ham radio) old equipment, and Boatanchors is more on the
equipment itself, but there is much overlap.

Hope this helps Jim Hill

Dear All,

I have an accessory loudspeaker for sale. I'm not sure what radio it goes with but it does have a clamp for attachment. I would suspect it's for mobile use. Speaker is in excellent shape and comes complete with about 4 feet of rubber cord and a PL-55 plug on the end. It's manufactured by LEWYT Corporation.

There is a picture of it on my website. Please use this URL:

http://home.stlnet.com/~keymaster/speaker.jpg

Price is $20.00 plus shipping.

Thanks for the read and have a great day!

The cork gas tank float on my 1966 Plymouth Station Wagon became saturated
and sank. I used a Mullard ECC whatever (12AT7) to replace it. It floated
on gasoline for years holding up the gauge sender arm, and was still in
there when I traded the car in the '70s. I always worried about it crashing
into the side of the tank and putting broken glass into the fuel pump and
carb., but it never broke. True story, how could I make up something like
this?

4506. Re: 7360 tube

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-06 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19981206092703.03688.00001372@ngol07.aol.com>
Source record: 93314

Hello,

The 7360 is a beam-deflection tube developed by RCA about 1960. It was usable in several roles: balanced modulator, mixer, and product detector. In commercial ham gear, it's job was usually as a combined carrier oscillator/BFO/balanced modulator. The Squires Sanders SS-1R receivers used two 7360s as receiver mixers, and achieved spectacular performance.

The reason they don't show up in tube tester datais that RCA classified the 7360 as a transmitting tube. The price is high for the same reason, plus the facts that they were not produced in mass quantities and there is no direct replacement.

There are several other beam deflection tubes, produced for color TV demodulator service. None is a direct replacement for the 7360 - different pinouts and operating conditions. They are the 6AR8, 6ME8 and the 6JH8. (There may be others I haven't discovered yet). The 6AR8 is an early tube, and is said to be microphonic. The 6ME8 and 6JH8 are electrically similar to each other, but have different pinouts and a third "accelerator" grid.

In the Tempo One, it's used as the BFO and balanced modulator. If the BFO works, and the transmitted SSB signal is OK, the tube must be good.

John;
All companies are still maintaining some security around this modification.
It's
for a good reason, some of these amps are still finding their way on to the 11m
Band. I appreciate your desire to complete this change as quickly as possible,
but most hams are not willing to bridge this securuty. We all went through the
process to get the job done. 73 and good luck.
Dave WA0ZZG

I have a beautiful SX-111 "Mark 1" receiver with companion R-48 speaker
for auction on eBay.

If you have an HT-37 transmitter, this is a wonderful way to complete
your "Classic Hallicrafters SSB Station" - just like in the
Hallicrafters advertisements.

Please check it out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=47388884

Thanks,

4514. WTB: National Select-O-Ject and/or Schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-06 00:00:00 UTC
From: jrininger@aol.com
Message-ID: <19981206124644.00935.00000763@ng-bw1.aol.com>
Source record: 93322

I'm looking for a National Select-O-Ject and a schematic for same.

If you have a Select-O-Ject you want to sell, or if you would be willing to sell me a copy of any Select-O-Ject documentation you have, please email me.

I am aware of the circuit in the early ARRL Handbooks, but it appears that this circuit may be a bit different than the National version. If I end up homebrewing a SOJ I want to see the National circuit before I start collecting parts.

Thank-you !

Jeff Rininger

Turner model 807 "Chief" ceramic mic, with original box, packing, catalog, instruction manual, etc. (Box is in fair condition. Mic looks like new.) $25
"American" mic -- the classic PA mic from WW II years, in brushed aluminum. (Made in Los Angeles.) Fair appearance. $20

Both plus shipping. E-mail if interested: mitchell@cwo.com

4518. Re: 7360 tube

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-06 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <366ADD3A.3582B9AA@calweb.com>
Source record: 93326

Hi,

I believe the lateer swan gear used the 6JH8 rather than the 7360. An article in the ARRL SSB handbook some years back also made use of th 6JH8 rather than the 7360 in an inband 6 meter phasing exciter. The author spent some time explaining his reasoning for the choice.. it was not one of cost if memory serves me correctly. I built a home brew SSB exciter some 30 plus years ago using the 7360s in a 1650 Khz phasing generator and then another 7360 as a mixer to get that IF to either 40 or 80 meters with a nominal 5 mhz vfo. The results were quite rewarding.

I would be interested to know how the Squires Sanders receiver with the 7360 front end holds up against modern semi-conductor front ends? Anyone have any data on that one?

Tnx
Bob, KE6F

I am offering for sale a Collins KWM-2A, serial # 39110, with the 312B-5 station control with remote VFO and the 516F-2 power supply. All are round emblem, condition is good, and the station is used daily or nearly daily(I have others). I've ordered a new amplifier and must sell some gear to pay for it. For more information email me at tbal0f@aol.com or call me at 520-398-9543. Price is $1400 firm. - al0f, Tim

4526. Re: Galaxy 300 Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-06 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <7979-366AFC2C-104@newsd-162.iap.bryant.webtv.net>
Source record: 93334

(1) It does do U/L SSB
(2) Power 150 - 175 watts (out)
(3) Yes - both 300 and 500 models.

Galaxy was a pretty cute radio. Problem was that it was somewhat small..
so it had some major heat (thermal) problems. On the plus side, the VFO
was very very stable. Also it was NOT a 100% tube radio...(there was a
small single transistor audio pre-amp located underneath the chassis!).

Expect to pay $275 to $350 for a good unit.

-B

Message-ID: <edla2.3375$tB2.8006049@news2.atl>
Source record: 93395

Found : TV-14 Tube type Cardmatic Transistor Tester!
(No, I havent been smoking anything, honest.)

I finally took a trip to The Secret BA WArehouse today.
Found a few things, brought a few things home. Left a few
things for next trip, as the car was full.

One of these items is a Transistor Tester, TV-14.(1967 contract)
Now before you yell "That aint no BA!", it is. It has
about a half dozen tubes in it. A tube type transistor
tester, who would have thunk it, eh?

Description: Big. About the size of a Cardmatic!
In fact it uses cardmatic type cards!! I am sure there
is not a snowball's chance of finding any of those cards,
but if anyone knows, let me know. Interesting piece of
gear, I will eventually pick it up and bring it home just
for the curiosity of it.

Anyone????

73

4562. Re: Blown fuses...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-06 00:00:00 UTC
From: Wayne Hall <74361.2114@CompuServe.COM>
Message-ID: <OL2bOaNI#GA.186@nih2naac.prod2.compuserve.com>
Source record: 93403

Try isolating the components inside the supply. Disconnect the filter capacitors from the rectifiers and see if it still blows fuses. If not, check to see if one or more capacitors has gone bad or if there is a short in the output wiring. If still blowing fuses, disconnect the rectifiers from the transformer secondaries. If OK now, part/all of the rectifiers may be shorted. If still blowing fuse, disconnect transformer primary leads & try again. If OK, the fault is inside the transformer. If fuse still blows, you know you have a fault in the power wiring leading to the transformer. Seems a tedious process, but it would narrow the search and wouldn't require detailed knowledge of transformer winding resistances, etc., which I don't have available.

Don't you see a letter or designation on the scale plate? Something like
K(CA) or J (IC). Some of the old portable pyrometers used E type
thermocouples (chromel-constantan) because of the high output. This isn't
that common a T/C these days, but easily available. Don't forget that you
will have to match the expected sensor resistance to get these old guys to
read right. Often this is marked on the scale, something like 10 Ohms.

Source record: 93261

I have a very nice RME 4350 receiver. The front panel is perfect and the cabinet is in good shape. If I were going to keep it, I would paint the cabinet. I also have the crystal calibrator to make it into an RME 4350A. The instructions of how to put the calibrator in is in the instruction manual. The receiver works very well.

I also have an RME 152A converter that covers 10 / 6 / 2 meters. I don't a clue if the converter works. I have never turned it on.

$225 plus shipping costs. I would consider a trade... what have you?

This is for all those people who think they're
"too smart" and "too cool" with their internet knowledge.
-The people making deals and then disappearing with the money.-

Meet Joe Cool Hacker- Mr. "I know all the tricks."
He is in Louisiana.
He made a deal with a guy in Florida for some radios.
He used a tricked-up account; "he couldn't be found"..
He took the money and no radios--

I got a call this morning. Some nice men in ties came to
his work place and made sure everyone got a nice,
looooooong look at him as they carted him away in chains
for "computer fraud." Couldn't happen to a nicer guy.

You think you're "too cool to get caught?"

Think again...

Hi everyone,

I'm looking for a reasonably priced compact oscilloscope such as the military surplus OS-8.

I believe Waterman made a civilian version but the military unit had solid state horozontal and vertical amplifiers. In today's world, they are not worth too much since the bandwidth of the amplifier was only abour 2 MHz. For my purposes, this is just fine.

E-mail me at w1ki@arrl.org

Thanks and 73,

Wayne, W1KI

4599. Wanted: photocopy of HQ-110 schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-07 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <366C247D.7E4C@amsat.org>
Source record: 93288

This past weekend I purchased a Hallicrafters HQ-110 at a local hamfest. For the most part, the radio works except for the RF sensitivity control. It does nothing when the control is rotated.

After investigating the problem, it appears someone was hacking and modifying the RF sensitivity circuit. The wires on the control pot are all soldered very poorly (cold looking) and there are two add on caps hanging off the control pot which look out of place. I think this circuit would be fairly easy to repair, however I need to acquire a schematic.

I'm willing to pay a reasonable price to obtain a clear readable photocopy of the schematic and any other alignment information.

Thanks, Tom NE7X...

4600. Heath HP23C question

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <74h6d2$43q@nntpb.cb.lucent.com>
Source record: 93289

A friend of mine purchased an HP23C supply at a
hamfest but got no manual with it. I had read where
the HP23C could be optioned for two different B+ low
voltage levels. He wants to use the lower voltage and
has looked at his and can not figure out how it is done.
Can someone on the net enlighten me on this?

Another related question he also accquired, at a different
time, what appears to the straight Heath HP23 supply. I say
appears because it is labelled on the chassis as a PS23! Is
this correct? I found no information where this supply was ever
labelled this way. Does he have a "rare" mislabelled supply?

From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <366C2C23.5DD4AA74@hamradio.org>
Source record: 93292

The Big Stick (as I recall) is a CB antenna made by Shakespeare, and is a fiber glass-enclosed vertical half-wavelength. As far as electrical performance is concerned, a halfwave (or 5/8 wave) is a halfwave is a halfwave, etc, etc.

When compared to a halfwave standard reference dipole, it has unity (zero) gain. Any gain figures attributed to halfwave antennas are the product of the company's advertising department, not the engineering department!

If someone has a halfwave antenna with gain over another halfwave, he has been been the victim of "antenna magic". More important than gain, one should consider quality and reliability when buying any antenna sold for the 11 meter band.

Hope this helps,

Al - K8EUR

Message-ID: <366C7AA7.2AE9@mail.cadvision.com>
Source record: 93298

I am listing the following equiptment for a friend of mine. If you
are interested please Email me at christep@cadvision.com
Please include your complete telephone number in your Email.
Collins round emblem KWM-2 with a Samsonite carrying case,a 516-F2
power supple and speaker, a PM-2 Power supply, a MP-1 mobile power
supply,a Collins mike and all manuals. Thse units are all 9+ out of
10 in appearance and they are all in excellent functional condition.
The price is $1300.00 US plus shipping costs.
A Hammerland HQ-129X general coverage receiver. It looks good and
works well. The knobs on it are not the original ones. The cost is
$150.00 US plus shipping costs.
A heathkit DX-100 with an SB-10. Both work well. The cost is
$150.00 US plus shipping costs.
Please Email Peter Christensen at christep@cadvision.com
Thank you. Peter

4612. WTT Kenwood TS-520S for working or non-working warc rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-07 00:00:00 UTC
From: Marty Duplissey <mduplissey@lsbs.com>
Message-ID: <y__a2.1306$fz4.2730@news12.ispnews.com>
Source record: 93301
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Just finished rebuilding a Kenwood TS-520S.

All new tubes (3)
All new bulbs (4)
Cleaned all switches.
Rebuilt Voltage regulator section
Rebuilt Cathode metering section.
Completely re-aligned to as good or better than original specs.. Except for
15 mhz wwv recieve.
Checked from stem to stern. This is a nice rig. Case has a few scratches.
Will re-paint it for right
trade.Have gotten very good audio reports. Worked a JA on 20 the other night
with
a vertical barefoot. Comes with repro owners manual.

Want to trade for working or non-working radio with warc ie 530, 830 or
equivalent
does not have to be Kenwood.
Marty
N5KBP

FWIW this is a rig I bought off this NG a couple of months ago that did not
transmit. A resister in the cathode circuit was open and a few other misc
problems I have corrected.

4621. FS: R-392 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-07 00:00:00 UTC
From: David Rogers <dr7zyq@nidlink.com>
Message-ID: <366CD95E.3E1F@nidlink.com>
Source record: 93310

I have a Western Electric R-392 for sale. This unit is near mint --
easily a 9 out of 10 -- maybe 9.5. What keeps it from being a 9.5 or
10?
1) The meter is not original -- close (and with a change of dial scale,
it would take a true expert to tell the difference), and
2) The case has vent holes drilled in it. The drilling follows a very
functional and attractive pattern, and was neatly done.

I can't guarantee it (no speaker, etc), but when power is applied, the
dial lights up, no fuses blow and no smoke appears.

This is a gem: you just won't find many in this condition.

$225. plus UPS (about $30.00). Will ship within states, maybe Canada.

Thanks,

David, WA7ZYQ

Do not deal with anyone calling himself CHRIS PRINGLE, VE8AA and using a P.O. Box in Crofton, BC

He also has a VE7 callsign, and has taken several of us.

I sent him money for a radio in August, whereupon he disappeared.

Save yourself some grief and don't deal with this individual.

Last used e-mail (now out of service of course) - was:

"Candice and Chris Pringle" katya@gec.net
He also used: orbit@gec.net

We are taking legal action to deal with this person. But be aware. I am told by some of the other victims that this has been going on for a couple of years.

Also known as VE7RPL, CHRISTOPHER PRINGLE.

The guy is bad news, I can tell you. I may have to go up to B.C. personally to get my HF transceiver that I sent him the money for!

His ISP is aware of the situation, as are the Canadian Authorities.

I've always been fond of Elmacs, so I bought this item in an auction without knowing it's purpose.
Any old- timers out there who've seen more than me? Or maybe a sharp new op. who can help me.
7" wide, 6" deep, and 4 1/2" high. Top covered with pretty blue mesh. One end has a phone jack, 110vac cord, 1 amp fuse, and a tapered porcelin stand-off with screw connector. One side has a plate reading "Model RP Style K". This side also has a phenolic term. strip with A G R stencilled on it. Tubes are 6X4 6AB4 6J6 6AL5 6BA8. A med size power xfmr, electrolytic cap, a relay, 2 tunable coils, and a plug in sealed type coil with slug tuning. Looks like an audio xfmr also. One guy said it may be a fixed IF for an old convertor. This doesn't have a motorola socket, however. It's a nice BA, but did it have any other use in another life? If you need a jpg pix I can send one. Thanks and 73s James W5LWU

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

Last day for the two new Collins mechanical filters for auction on
eBay. These
are the matched USB and LSB filters centered on a 455 kHz IF frequency.

Please check it out - see the info table and good pictures too.

Source record: 93175

I've "boatanchored" it around for 10 years and need to get rid of it.
Good condition, missing tubes, not sure if it still works.
It's too heavy to ship, so you need to be in or near Plano/Dallas Texas.

Price: Is it worth anything?

Please respond to lcordell@mindspring.com if you are interested.

Thank you.

Give this guy a break...actually he was "honest" in his description
....he told you of the imperfections... better than you get from some
folks....however...mint???..no way...he will learn...eventually....
after all...he's offering an interesting boatanchor...let's not piss off
a potential contributor of boatanchors...you never know what the future
of buying and selling here will bring.....next year he may have a "mint"
KW-1....or something you really want....
regards....
Chuck...

4646. FS: Tuning dials, Hammarlund HQ120/129, other bits

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-08 00:00:00 UTC
From: "A. B. Bonds" <ab@vuse.vanderbilt.edu>
Message-ID: <366D9FFA.9161B478@vuse.vanderbilt.edu>
Source record: 93182

I have two good tuning dials (6050, 6051) for an HQ120X or 129X (same part). These are pretty clean, uniform ivory color, warping no greater than 1/4" at the edge, flat surfaces. Discoloration at edges but not visible in window, slight scuffing on main tuning dial, but numbers are crisp and clear. $15 shipped in US.

Also some other bits for an HQ120. I don't have knobs, IF components or tuning caps, power supply components, volume pot, meter. I do have a front panel (flat, no extra holes but needs refinishing), meter bezel with glass, tuning bezels (metal only), coupla porcelain octal sockets, rf tuning coils, rear terminals, etc. These will be cheap to free for postage.

matt, regarding the question of the big stick, 40 pounds sterling is a real good buy. this antenna is a great omnidirectional antenna, will stand up to gale force winds and freezing. i put it through the test myself 15 years ago in northern canada. when we checked the swr after fine tuning the top, the swr needle came back to rest almost at 1.1. i give it a 8.5 out of ten. lacks "ears", but this can be remedied with the addition of a ground plane kit.

> End of Ham-BoatAnchors Digest V98 #869
> ******************************

matt, regarding the question of the big stick, 40 pounds sterling is a
real good buy. this antenna is a great omnidirectional antenna, will stand
up to gale force winds and freezing. i put it through the test myself 15
years ago in northern canada. when we checked the swr after fine tuning
the top, the swr needle came back to rest almost at 1.1. i give it
a 8.5 out of ten. lacks "ears", but this can be remedied with the addition
of a ground plane kit.

Ham-BoatAnchors Mailing List and Newsgroup wrote:

From: Al Dolgosh <al.dolgosh@hamradio.org>

Subject: antenna question

The Big Stick (as I recall) is a CB antenna made by Shakespeare, and
is a

fiber glass-enclosed vertical half-wavelength. As far as electrical

performance is concerned, a halfwave (or 5/8 wave) is a halfwave is
a

halfwave, etc, etc.

When compared to a halfwave standard reference dipole, it has unity
(zero)

gain. Any gain figures attributed to halfwave antennas are the
product of

the company's advertising department, not the engineering department!

If someone has a halfwave antenna with gain over another halfwave, he
has

been been the victim of "antenna magic". More important than
gain, one

should consider quality and reliability when buying any antenna sold
for the

11 meter band.

Hope this helps,

Al - K8EUR

Subject: DRAKE C-Line with C-4 Console for sale.

I have a very nice C-Line.

* R4C Receiver, with Calibrator, no cw filters

* TX4C Transmitter

* MS-4 Speaker

* PS-4 Power supply

* And the rare C-4 Drake Station Console

All pieces are in very good condition, no modifications, all original.

They come with the original cables and original Manuals. $1000+shipping

From: "Peter F. Christensen" <christep@mail.cadvision.com>

Subject: FS Collins, Hammerland. and Heathkit equiptment.

I am listing the following equiptment for a friend of mine. If you

are interested please Email me at christep@cadvision.com

Please include your complete telephone number in your Email.

Collins round emblem KWM-2 with a Samsonite carrying case,a 516-F2

power supple and speaker, a PM-2 Power supply, a MP-1 mobile power

supply,a Collins mike and all manuals. Thse units are all 9+ out of

10 in appearance and they are all in excellent functional condition.

The price is $1300.00 US plus shipping costs.

A Hammerland HQ-129X general coverage receiver. It looks good and

works well. The knobs on it are not the original ones. The cost is

$150.00 US plus shipping costs.

A heathkit DX-100 with an SB-10. Both work well. The cost is

$150.00 US plus shipping costs.

Please Email Peter Christensen at christep@cadvision.com

Thank you. Peter

From: "Ron Ostman" <w0nyq@minntaccdp.com>

Subject: Guardian Series 200 relays f.s.

For sale:

I have quite a few new-in-box Guardian Series 200 relays. These
were the

"roll-your-own" modular type with removable coils and contact assemblies.
I

have both 24 vdc and 120 vac coils available.

Contact asseblies can be stacked to make whatever configuration desired.

These relays were original equipment in some Ham gear and were popular
with

homebrewers because of their versatility.

$15.00 ea. plus shipping

From: dew@nwsgpa29.cb.lucent.com (Dave E Woolf, 0b111, 4760)

Subject: Heath HP23C question

A friend of mine purchased
an HP23C supply at a

hamfest but got no manual
with it. I had read where

the HP23C could be optioned
for two different B+ low

voltage levels. He
wants to use the lower voltage and

has looked at his and can
not figure out how it is done.

Can someone on the net enlighten
me on this?

Another related question
he also accquired, at a different

time, what appears to the
straight Heath HP23 supply. I say

appears because it is labelled
on the chassis as a PS23! Is

this correct? I found no
information where this supply was ever

labelled this way.
Does he have a "rare" mislabelled supply?

Subject: THINK YOU'RE SMART? READ THIS.

This is for all those people who think they're

"too smart" and "too cool" with their internet knowledge.

-The people making deals and then disappearing with the money.-

Meet Joe Cool Hacker- Mr. "I know all the tricks."

He is in Louisiana.

He made a deal with a guy in Florida for some radios.

He used a tricked-up account; "he couldn't be found"..

He took the money and no radios--

I got a call this morning. Some nice men in ties came to

his work place and made sure everyone got a nice,

looooooong look at him as they carted him away in chains

for "computer fraud." Couldn't happen to a nicer guy.

You think you're "too cool to get caught?"

Think again...

From: NE7X <NE7X@amsat.org>

Subject: Wanted: photocopy of HQ-110 schematic

This past weekend I purchased a Hallicrafters HQ-110 at a local hamfest.

For the most part, the radio works except for the RF sensitivity

control. It does nothing when the control is rotated.

After investigating the problem, it appears someone was hacking and

modifying the RF sensitivity circuit. The wires on the control pot
are

all soldered very poorly (cold looking) and there are two add on caps

hanging off the control pot which look out of place. I think this

circuit would be fairly easy to repair, however I need to acquire a

schematic.

I'm willing to pay a reasonable price to obtain a clear readable

photocopy of the schematic and any other alignment information.

Thanks, Tom NE7X...

Subject: WTT Kenwood TS-520S for working or non-working warc rig

Just finished rebuilding a Kenwood TS-520S.

All new tubes (3)

All new bulbs (4)

Cleaned all switches.

Rebuilt Voltage regulator section

Rebuilt Cathode metering section.

Completely re-aligned to as good or better than original specs.. Except for

15 mhz wwv recieve.

Checked from stem to stern. This is a nice rig. Case has a few scratches.

Will re-paint it for right

trade.Have gotten very good audio reports. Worked a JA on 20 the other night

with

a vertical barefoot. Comes with repro owners manual.

Want to trade for working or non-working radio with warc ie 530, 830 or

equivalent

does not have to be Kenwood.

Marty

N5KBP

FWIW this is a rig I bought off this NG a couple of months ago that did not

transmit. A resister in the cathode circuit was open and a few other misc

problems I have corrected.

wrote:

>Hi,

> I believe the lateer swan gear used the 6JH8 rather than the 7360.

Hello Bob,

To quote Johnny Carson, "I did not know that!"

> An article
>in the ARRL SSB handbook some years back also made use of th 6JH8 rather than
the
>7360 in an inband 6 meter phasing exciter. The author spent some time
explaining
>his reasoning for the choice.. it was not one of cost if memory serves me
>correctly.

The article you refer to was in QST for October, 1963. It had many innovations, such as the use of cascode output from the balanced modulators and a coax cable RF phase shift system.

The reasons given for choosing the 6JH8 over the 7360 are:

1) Useful peak plate current three times that of a 7360

2) Higher plate dissipation

3) Lower deflector current under high drive conditions

4) Better deflection linearity

5) More elaborately focused electron gun

Disadvantages of the 6JH8 include a higher current beam and the need for a higher deflector driving voltage.

Really a great article - lots of info on beam deflection tubes. Besides the 7360, 6JH8, 6AR8 and 6ME8 already mentioned, there are the 6HW8 and 7763. I have no data on those last two types.

> I built a home brew SSB exciter some 30 plus years ago using the 7360s
>in a 1650 Khz phasing generator and then another 7360 as a mixer to get that
IF to
>either 40 or 80 meters with a nominal 5 mhz vfo. The results were quite

rewarding.

I have often thought of building an 80/40 CW transceiver with a 1650 or 1700 kHz IF and 5 MHz VFO - but the question of suppression of the IF 2nd and 4th harmonic is always there.

> I would be interested to know how the Squires Sanders receiver with the 7360
>front end holds up against modern semi-conductor front ends? Anyone have any data
>on that one?

Me, too! There was an article on that front end ("New Trends in Receiver Front End Design") at the time, and recently ER did a great article. I think a good SS-1R would give anything made for hams a good run for the money. The trouble is that there are only a few of them around, and there is no matching transmitter. In 31 years of looking, I've only seen one, and it was in poor shape. SS made the mistake of trying to go up against Collins without a complete line of gear. A real pity - the SS-1R design is excellent!

What I'd really love to see is for some old gear in pristine condition to be tested in a lab like ARRL has, to get performance numbers for direct comparison to "modern" gear. the closest thing I've been able to find is Sherwood Engineering's website - and they don't list the SS-1R.

My ideal RX would start off with a beam deflection mixer feeding the IF crystal filters directly - get the selectivity as close to the antenna as possible! Premixer LO generation, as in the Drake 4 line and the TenTecs solves the stability question.

There was an article by W1KLK, Doug Blakeslee, in the early '70s called "An Experimental Receiver for 75 meter DX work". He used a 7044 dual triode as a grounded grid RF stage feeding a 7360 mixer. Truly amazing overload performance was reported. Looks really neat, too.

My current rig uses a 6EH7 RF stage feeding a 7360 mixer in a single ended design, like in the many '60s Handbook receivers. (It's a long story). Yes, I have a few, and no, they're not for sale.

I'd love to hear from anybody with more data on using the 7360 or 6JH8 as a receiving mixer. Particularly interested in drive levels, impedance matching, and design methods. Anybody got the straight dope?

I have a lot of seven hand microphones on eBay. No reserve.

This is a lot of seven (7) hand microphones as follows: (3) Shure 104A one with noise cancelling case; (1) Shure 488B with noise cancelling case; (1) Electro Voice 600E; (1) Shure 404C; (1) Mystery Turner. These were in a box labeled "good mikes" but I haven't personally tested each one, so I'm selling them "as is". I tried the 488B and it worked fine.

URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=47812330

Closes 12/14/98 at 19:23:37 PST.

Thank-you.

The sad thing about it is the guy(s) probably used a STOLEN computer to hawk his "WARES"...remember, always assume the worst, but the MAJORITY of online people who do business are very nice, honest folks... It is sad that there are those who would ruin it for the rest of us..
Happy holidays!

That's sort of like taking a mint chocolate from the box of candy,
taking a bite out of it, wrapping it back up, and replacing it.
It's still a mint, even though it's slightly used.

I bet the guy with the "near-mint" radio also has a lot
of "near-mint" toilet paper, "only used once."

> Dave Woolf- K8RSP

I have a PS-23, which was made for one year after Heath discontinued the HP series of power supplies. It is the same as the HP-23C. I use mine to power a Heath HX-1681 CW Transmitter.

There is an option to switch the low B+ between 350 or 275 Volts. It's a simple, one wire change.

I have the original manual, with the schematic, but you can get a schematic that is very close off the net.

"http://members.accessus.net/~dwentz/kb9jja/heathkit/" has gif schematics for the HP-23 and HP-23B. The whole series is very simular. From these schematics, you should be able to find the correct wire to switch. If you have trouble, let me know and I can probable make some copies of the manual. There are also some service bulletins, on the above site, that may be of interest.

The HP-23 has both 6.3 and 12.6 Vac outputs, an adjustable bias output, and 350/250 low B+.

The HP-23B, C, and the PS-23 only have 12.6 Vac, no adjustable bias output and 350/275 low B+.

You need to be aware that all of these units were made to operate from a remote power switch. This was so you could stick it under a desk and control it from your transmitter power switch.

As far as whether the HP-23 is rare, who knows. Here is an excerpt from the Heath site above.

First Year Made	Last Year Made
HP-23 Power Supply 120 VAC for SB series	1963 1968
HP-23A Power Supply 120 VAC for SB series	1968 1973
HP-23B Power Supply 120 VAC for SB series	1973 1977
HP-23C Power Supply 120 VAC for SB series	1978 1979
PS-23 Power Supply same as HP-23C -	1983

Hope this helps.

Martin

I'm not sure which adaptor that would be. For the longest time I thought the TV-7 came with three adaptors until I got a real nice TV-7D/U the other day that had five adaptors. I'll have to pull it out and read the part numbers off of them.

Hmmm...didn't see a mint anywhere near the rig. Must of fell off and rolled
under the table.

That's okay, the buyer should tell him that he will pay for it with a "Near
Mint" check.

Dear All.

I am looking for English and German recieving and transmitting tube manuals,
dating from about 1930 - 50.
They must be provided with curves , to be of real use to me.

Also manuals with curves for the 1960-70ï¿½s transmitting,industrial and proffesional
tubes is of great interest to me.(That is the 7000-8000 series ex:7241 ,13E1 etc)

If you do have any of these , I will be happy to buy (even copies).
We might also trade for something , whatever you prefere.

Thank you for reading.

- Sincerely Kurt Steffensen

Read the whole list, Ham stuff is near the end. There is no junk here.

The following are all collectible/working/very good or better condition:

Silvertone 1949 brown bakelite Am Broadcast Model 9000

RCA 1940 Model 65X1 Brown bakelite

Emerson 1955 Model 812 Grey

Granco Model 704 circa 1963 AM/FM

Zenith 1958 Model 6B05 Beige and Cream

Philco Cathedral circa 1937 Model 60 Wooden, Dark Brown

RCA Victor 1935 5 tube Midget

RCA 1946 AM/SW 9-12 Mhz Model 66X1 Bakelite brown and gold

Motorola portable 1957 in ired leatherette Model 5P32R

Zenith 1941 AM/SW 5 pushbutton 5.5-18 Mhz and BC Model 6551

GE Musaphonic 1954 Model 921 in grey plastique

Schaub Lorenz 1956 "Goldy 250" similar to Telefunken

Trav-ler 1941 small 2 knob brown bakelite

RCA Victor 1955 portable light green plastic "His Masters Voice" emblem Model 6BX6

Truetone AM Model 02810

Arvin HI-FI 1956 Deco-style metal case Model 3586 AM 14"x10"x10" app.

Telefunken Jubilate 1964 SW/AM/FM Model 5351W

I told you it was a big list!!

Vibroplex Paddle 1960 "The Original" Standard Grey wrinkle and Chrome some pitting of chrome, some chips on paint, overall good condition

Collins MP-1 Power supply 1961 New never ever used with "tested good" tags and warranty card and unused hardware for cable attachment as fresh from the factory

Millen Grid Dip Meter with 5 coils in box looks good untested

Hallicrafters T.O. Keyer 196o-ish Looks/Works wonderfully

10 Amp 12 volt Power supply like new

Hewlett Packard Freq. Counter Model 5382A up to 225 Mhz Looks/ Works Great

Hallicrafters SX-28A 1944 Extremely rare marked SX-28A nicely, properly repainted, and looking extremely clean missing the dial brake with sevice manual copy and a couple of cool articles about the receiver

Hammarlund HQ140-X Beautiful with Speaker with H. logo Works/Looks great nicely repainted in grey hammertone

A pair of Turner 454C Microphones Good condition Grey unamplified (plus two style)

Drake TR4-C with AC-4 in MS-4 Cleanest anywhere works marvelously

Cushman Model CE-5 o'scope/comm. monitor/IF/RF sig generator Digital readout Works/ Looks Great no face cover VERY HEAVY

Collins 75A4 SSB filter, CW filter, 4:1 knob Serial # 4458 Extremely Clean/Original 100% VERY NICE STABLE RECEIVER

Collins speaker 270-G2 or 3? silver grill, horizontal bakelite bars above and below speaker same height as 75A4 someone painted light grey, will need to be repainted St.James Grey

Collins Winged 32S1, 312B4, 30L1, 516F2, 75S3, CCA very good, Looking Great and On The Air Daily

MFJ Model 1786 Super Hi-Q Loop Like new, never put up

Drake "High Patch Hybrid Phone Patch" like new

Collins 0-800 milliamp meter in box, like new, don't think it has been used, marked Collins Radio Company

Offers considered on all. You pay shipping/ insurance etc.. No low ball offers please, I know the value on all items (so don't embarass yourself). Post office Money order or Bank Check (no personal checks, no credit cards)

Everything is working and guaranteed, return insured at your expense in same condition in ten days for money back

It's breaking my heart to sell this much of my collection, but personal reasons force sale

unsold stuff will go on EBAY

4698. 1933 Hammerlund Comet for Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-09 00:00:00 UTC
From: arc5@ix.netcom.com
Message-ID: <74mhm4iie1@nnrp1.dejanews.com>
Source record: 93116
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

I have a very nice condition 1933 Hammarlund Comet
WITH THE COMPLETE PLUG-IN COIL SET IN ITS BOX
and an original manual.
It looks like a T/R switch has been added
(neatly), but I'm not an expert on these sets.
Very clean paint with few flaws.
Was kept in a house.
Looks like you could recap it and turn it on.

Will trade for good-condition, unmodified
rare "ARC-5" type Command sets, like:
AN/ARC-5 T-15 transmitter, covering 500-1300 KC.
AN/ARC-5 T-89 transmitter, coving 100-125 MC.
AN/ARC-5 T-90 transmitter, covering 125-150 MC.
AN/ARC-5 R-112 receiver covering 100-125 MC.
AN/ARC-5 R-113 receiver covering 125-150 MC.
8th-Air Force modified BC-455 (20-48 MC).
RAT and RAV receivers and/or groups of accessories.
Sets factory-marked in Cyrillic (Russian).
Authenticatable factory prototypes.

Others considered.
Trade depends on rarity and condition.
(Not interested in T-23 or R-28).

I already own multiples of more "common" sets
and have no interest in large lots of them.

Please note:
***The radio and/or coils are absolutely
not for cash sale
and offers to buy for cash will be
deleted without response.***

***I am not interested in trading for
anything other then that listed above.
Offers of other trades will be
deleted without response.***

They do match... the smaller knobs on these receivers never had the dress rings; only the larger main tuning and bandspread knobs did. My original S-38 (no suffix) is this way, and I don't believe that Hallicrafters made any knob changes until the "E" variant, which had a completely different appearance.

The smaller knobs only had a dot of red paint on the surface edge to serve as a pointer.

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Techron 5000 WATT audio amplifier. Modified model 8521.Similar to Crown 7700 series. This unit was originally used to drive superconducting magnets in a Picker MRI scanner. Matches loads to 1 ohm or lower. Frequency response DC-50KHz. Output +/- 145 V 45A rms, 180A peak. <.1% THD Originally used 3-phase 480V power supply, but has been converted to run from single phase 208-240V (will run on normal household dryer/ electric stove circuit). Mounted in rollaround rack with blower cooling. Has DVM readout of output voltage/current.

Possible applications: DC servo motor driver (5 HP), Shaker/vibration table driver, ELF transmitter, Stadium size PA amplifier, world's loudest garage band, Subwoofer from hell, etc. Have all documentation/service manuals. Modifications professionally done. $1200 OBO BUYER PICKUP or LOCAL DELIVERY ONLY. (Northern NJ) Weight about 250 lbs or so.

2.) Vishay/MicroMeasurements 4-channel strain gage amplifier and power supply. Model 2110/2120. Gage excitation , balancing, cal sigs. Analog output. $75

3.) Sony VO-5600 3/4" VTR 19" rack mount commercial/broadcast quality. Excellent condition. $150

4.) Tektronix 5103 rack mount scope. Mainframe working well. Plugins (5A18/5B10) need work.
$40

5.) Heise 710A digital pressure monitor. 0-15 psig with LED readout and relay contact output.
Works well. $25

6.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges. Good to 400 MHz. No slugs needed! $100

7.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

Heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz bandwidth. 5" CRT $50

8.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. HEAVY-pick up preferred, but will ship if you pay for crate! $150

9.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm outputs and level meter. $125

10.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to

3 V output (+20 dBM) into 50 ohms $100

11.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $100

12.) Box of used, tested tubes. No useless TV types. Mostly pulls from test equipment and industrial gear. 6 and 12 volt types, lots of Industrial/military types. Some audio types. Approximately 400 pieces total. Prefer pick up. $150

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

I figure that someone on this list will have the answer to this question:

Is there an easy way to hollow out a bad twist-lock electrolytic and replace its guts with a modern axial or radial electrolytic? I've been given some old TEK equipment with a bunch of bad twist-locks, and hate to cludge something it their place.

Thanks for any help.

Terry K8TP

Source record: 93186

Hi

Been looking around for a while with no luck in finding the right mica type loading caps that have gone south in mu otherwise ok 32V2.

Two are bad: one is 470pf, the other is 220pf - both rated 2500v. They have holes for mounting and tabs for soldering and are mounted in a stack which is going to be hard to get at, so I'd like to get the exact enough replacements to keep this beauty stock.

Anyone know of a source for these?

Tx

Bob

Source record: 93193

Hi folks.
I need some info please. I just picked up a Hallicrafters sx-101. I got it in a trade and the man didn't know anything about it. He didn't think it worked. It works great! I don't know much about amateur radios. Is this unit a transceiver or just a receiver? What years did they make this model? I want to sell it. Anybody know how much I should ask for it? I've seen some radios on e-bay for sale but only current bids, not what they eventually went for.

It's all original. It only has a couple of scratches on the outer case. All knobs and switches are in perfect shape and they all work! The glass doesn't have so much as a scratch on it. I hooked a TV rabbit ears antenna to it and a speaker we had laying around and suddenly I was listening to guys all over the country!

Any help would be greatly appreciated.
Thanks.

MFJ Deluxe Power Sentry, Model MFJ-825.

It has two meters on its face, one for forward power, and the other for reflected power or SWR. It can be switched to measure average power, peak power, or SWR. It has 3 switchable modules installed, to measure forward power as follows:

HF - 200 or 2000 watts Full Scale.
HF - 2 or 20 watts FS.
VHF (50-175 Mhz) - 20 or 200 watts FS.

NOTE: Each measurement module has its own set of "in" and "out" UHF connectors, so no fiddling is necessary to measure power output of different radios.

Its case is black metal with chrome trim--no plastic! It's very accurate and in near-perfect cosmetic condition. It dates from . 1983. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers in 1987. You get the manual with it.

Entire assembly bought for $240 in 1983 dollars. The price is $150 today.

HF - 2 or 20 watts FS.
VHF (50-175 Mhz) - 20 or 200 watts FS.

NOTE: Each measurement module has its own set of input and output "UHF" connectors, so no fiddling is necessary to measure the power output from different radios

Its case is black metal with chrome trim--no plastic! It's very accurate and in near-perfect cosmetic condition. It dates from 1983. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers in 1987. You get the manual with it.

Total original cost in 1983 dollars: $240 You pay $150.

Model HD1418 Active Audio Filter -- dates from 1988.

Assembled solid-state unit in mint condition. Attractive design. Has bandwidth settings for CW, SSB, and RTTY. The CW filter includes a tunable notch/peak filter with variable BW. The unit also has high and lowcut capabilities to get rid of "rumble" and "hiss". It has its own audio amplifier.

Very dark brown metal with red and white lettering--no plastic! Coordinates with the Heathkit rigs of the era. In perfect cosmetic condition. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers shortly after I assembled it. You get the manual with it.

Asking $100

Hi Gang,
Outa space (again), gotta make room for new toys.
I'm offering for sale my RAL-5 receiver and power supply.
It is a 1939 vintage shipboard regenerative receiver, and is in
excellent, original cosmetic and operating condition. The only
problem I've ever had with it is that the bandswitch contacts
need cleaning from time to time (big silver/ceramic switches).
Too heavy to ship, so pick-up only in Santa Rosa, Calif (just north
of San Francisco). I'd like to get $125.

i've run into this before. i personaly dont see how anyone can expect to buy 20+ year old equipment and expect it to be pristine. its out there i know, but i would be naive to think that it would be a commonplace thing. if i buy old gear i EXPECT scratches, dust, maybe even a little rust. its old gear. therefore, when i sell i just post as good, rough or poor. i always list everything wrong that i can see to avoid getting bombed with "retentive" posts like "how big is the rust spot" or the best i've had so far is "what brand are the tubes and what do they test". how can someone expect you to go through all this over a $50 or so peice of gear? robert cruz ke4mcl

From: Bis_Wichy@webtv.net
Message-ID: <17250-366FB142-2@newsd-161.iap.bryant.webtv.net>
Source record: 93074

Ahh Mike, your killing me....

OK the solid state stuff your used to basically uses small silicon/germanium crystals. Like all crystals, there is some water in them. Over a period of time, these water molecules leave the crystal (hydration). The crystal becomes more fragile as time passes. Possiblity of electrical failure increases. There is some proof that leaving solid state equipment on lengthens life slightly. But for most, not enought to make a difference. Next to Radiation, Hydration is a serious problem for solid state stuff on board space craft.

Tubes on the other hand are forever. Nothing in them degrades. Many of us still use tubes 70 years or older. Tubes tend to use more power so Resistors, Capacitors and Inductors are larger. Larger size means easier to handle and easier to fix and replace.

As to your question - For most tube equipment, you turn it on when you need it... for some radios, it may be required to let it warm up to minimize drift.

If you storing it, might I suggest you turn it on once a year - not for the tubes sake but for the electrolytic capacitors in the power supply. They tend to dry out the electrolyte inside them if not used for long periods of time.

But... the same can be said for electrolytic caps in solid state equipment. The difference being in that when it fails, you throw the whole thing away (or sell it) because it's too costly to repair.

Hope that helps -

-B

>

You could have Frontier redo them for you (see FAQ for current address) or do them yourself. Basically you slice the can open about 6mm (1/4") above the bottom ring and clean the guts out of the can. you then make a ring to fit inside the can at the cut and, after installing the new caps, you epoxy the can to the base with the ring as a splice. You should end up with just a line where the joint is.

4766. RA 17/117 details

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-10 00:00:00 UTC
From: Simon Cox <simon.cox@breathe.co.uk>
Message-ID: <01be2449$4056de80$LocalHost@simoncox>
Source record: 93079

Some little while ago I requested RA 17 info and someone replied giving the site for RA 117 details, on that site I also found details of an antenna splitter. I've lost the address of the site and want to get back and check for more info, there is an address of 0H1JEA@0H1RBU.FIN.EU on the RA 117 documents but that email doesn't work. I have managed to find the site in what is probably the authors native tongue but can't find it in English CAN YOU HELP.

The site that I can find is www.sci.fi/~ijl/linkit.html I've written to the email address on that site without reply.

I finally got around to sorting my excess ARRL stuff, following
are all in VG condition with any exceptions noted:
ARRL HANDBOOKS
1937 $15 Rough,spine gone,cover still there
1948 $20
1949 $15 Heavy wear on spine
1950 $15 Heavy wear on spine
1957 $5 Very rough, no cover or spine-contents good
1961 $15 another copy $10 w/wear on spine
1965 $15
1967 $15 have 2 copies both VG
1969 $10 wear on spine
1970 $10
1971 $10
1972 $10
1973 $10 have 2 copies both vg
1975 $10
1976 $10 have 2 copies both vg
1977 $10
1978 $10 have 2 copies both vg, also 1 copy with wear to spine $5
1979 $10 large format
1980 $10 " "
1981 $10 have 2 copies both vg, large format
1983 $10 large format
1987 $10 " "
ARRL CALLBOOKS
1952 $25 Spring Issue
1979 $10 US
1981 $10 US
1981 $10 Foreign
1983 $10 Foreign

Single copies can go Priority Mail for $3---multiple books would be
better at Book Rate--10 days or so delivery time but CHEAP. Craig

Is that latter small roller for vhf? If its got a lot of turns and smaller gauge wire, I bet 2kw would fry it. I have one slightly larger, and by my calculations, it would be good for a few hundred watts, maybe even 500, but in a resonant circuit transferring 2KW, theres quite a bit of current. I doubt the larger one would be good for more than 1.5 KW of rf.

Don

4779. TRYING TO I.D. TWO LOWFERS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-10 00:00:00 UTC

Can anyone ID these two LOWFER (1750 meter) beacons
I am receiving in Austin, Texas:

A. 174.5 KHZ sends "D" every 10 seconds.
Heard 24hrs a day.
Every third "D" preceded (2 seconds) by an "E".
"Hiccups" about every 5 minutes, then returns to normal sending.
Good sigs here in Austin.
This is not "D" in Iowa (175 KC).

B. 189.7 KHZ sends "TEXAS AGGIES" about 7-10 WPM.
Copied 1 PM 10 December 1998, QSB down into noise 2PM.
QSB back up at 2:30 PM.

Good .wav files of these emailed on request (big).

Thanks and 73 DE Dave Stinson AB5S

>

For what it is worth, I have a prototype winding facility intended mainly for smaller transformers and coils. Up to the equivalent of, say, 25 watts or so. I would guess that the value of stock and equipment is in the range of $5,000- 10,000. Most of the materials needed are not available in small quantities but in case lots. Laminations come by the carton or pallet, insulation by the roll (24"x50yds for example) and you need a broad spectrum of laminations, core tubes, insulations, sleevings and WIRE. You will need spools of all sizes of magnet wire from #12 to #38 or so. You will need to know all about transformer design and construction (plus a bit more) to get it right the first time--you cannot afford to scrap any coils. You will need to know all about regulatory requirements to make a SAFE transformer--oh, and how about liability if one fails? This is a costly venture to do properly, but there is place for a shop to do good rewinds at reasonable cost.

My $.02

Both are great examples of the top end of vacuum tube technology. I guess that beauty is in the eye of the beholder though. In the early 70s I had a friend who acquired the first S line series (75S1, 32S1, station console, Collins microphone and speaker) He set it up in his bedroom and I remember remarking almost everytime I visited him "Man, you got to admit that this looks impressive".

Hi Don
Have you ever looked inside a large tuner? You know the ones that
handle
2KW+? Well the big one is about 3 times the size of those. The little
one is also quite hefty. The size of the wire is #12. I really doubt
that whatever we use will do any harm to either of these. My suggestion
would be try loading into a more resonant antenna. I also have no idea
how you came up with the calculations for VHF? I used the small one in
a Thunderbolt Amp that worked excellent and was basically the same size
as the original but much higher quality. I think this proves that the if
the small one can handle two 4-400s on HF then the big one should handle
far greater power levels. What do you think? If you have any further
questions please contact me through direct e-mail. 73 Chris

I dont know about vhf rollers, never saw one, but I wondered if they
might exist. I got the determination for power handling for the inductor
I have from the AARL handbook. I did have a Johnson Killowatt amplifier
one time, and it had a hell of a lot larger inductor than what you say
will work at 2kw. I have also fried a few inductors that were larger
than your 2KW+ Inductors that are 4" by 2". you never did give the wire
gauge, which is the most important parameter. Yes, I have seen some
rather shitty commercial tuners, and I have one rated at 300 watts. It
works fine, as long as the load is close to being matched. Otherwise,
its good for about 75 to 100 watts. If the load isnt nearly matched, it
will arc occaisonally anyway. I realize you cant get back here too
often, so I sent you a copy as you requested.

4791. National PW Dial adjustment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-10 00:00:00 UTC
From: Vic Rosenthal <rakefet@rakefet.com>
Message-ID: <3670869E.6E0ADA57@rakefet.com>
Source record: 93104

I just got a really nice NC101X. Apparently, someone has played with the dial, and I don't know how to adjust it: what I want is to get the number displayed in the top window to be centered. Now, it seems that the number in the 4 o'clock window is centered. No matter how I place the knob on the shaft, I can't seem to get it right.

This should be easy for you old National guys.

Thanks,

Vic, K2VCO

I have subject bug with the carrying case. Case is average. inside felt is decent. Serial number on the bug is 128,907, New York address. it was payment for some repair work and I prefer to use my TS-850's internal keyer. The bug will clean up nicely. It is the kind with the long, single flat bar down the middle that attaches to the weight. The weight is a square block.

$125.00 plus shipping from San Diego 92139.

Good night and God bless.

Hi,
Have Swan 500CX with matching power supply and speaker. Works well on all bands 80-10 meters. I get 180w out on 80 and 80w on 10. This radio has the solid state vfo and is very stable. Cosmetics are nice also. includes manual. $160 plus shipping from CT. Thanks, Gary

4812. Re: Sweepstakes CW -- anyone else notice the low CK's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-10 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19981210013428.12885.00000181@ngol01.aol.com>
Source record: 93153

Hello Folks,

I was intrigued by the CW SS question, so I went through this year's log and sorted my 572 QSOs by decade of check (CK). Here's what I got:

1998 CW SS - N2EY - 572 QSOs, 76 sections, 22 hours. Bands used: 80, 40, 20 meters

1990s - 42 (7.34%)
1980s - 24 (4.19%)
1970s - 146 (25.52%)
1960s - 176 (30.77%)
1950s - 155 (27.09%)
1940s - 14 (2.44%)
1930s - 11 (1.92%)
1920s - 3 (0.52%)
1910s - 1 (0.17%)

A few of these are probably inaccurate because they are club stations, and the check sent is sometimes the year the club was licensed, not the operator.

The data looks like a rather rough bell curve, with the peak in the late 1960s. I was first licensed in 1967.

Some might look at this data and conclude that newer hams don't like the SS, or maybe even that they don't like CW. But there is far more going on here than that.

For one thing, the check tells us only how long ago someone was licensed, not how old they are. I'm 44 - and licensed 31 years! There are a lot like me, too.

There is a wide range of performance levels in the SS, as well. There are "big guns" who have big signals, lots of skill, and put in 24 hours. They work 1000+ QSOs, and can hold a frequency. At the other end of the spectrum are the "little guys" who have modest signals, are on for a few hours, and make a few dozen contacts by the "hunt and pounce" method. Plus everyone in between! All are welcome, of course - but who is most likely to show up in everybody's log? The big guns. And is a big gun more likely to be a relative newcomer, or somebody with a few decades in ham radio?

Also, the growth of ham radio has not been linear. Before 1950, there were about 80,000 hams. By the early '60s, that number had jumped to almost a quarter million.

So then I dug out the old logbooks and started figuring. (Percentages may not equal 100 due to rounding)

1988 CW SS - N2EY - 552 QSOs, 72 sections. Bands used: 80, 40, 20 meters

1980s - 34 (6%)
1970s - 141 (26%)
1960s - 165 (30%)
1950s - 155 (28%)
1940s - 22 (3%)
1930s - 27 (4%)
1920s - 8 (1%)
1910s - 3 (1%)

The peak is now in the early '60s, and the curve is less symmetrical.

So I went back further, and got these figures:

1978 CW SS - N2EY - 275 QSOs, 55 sections.

1970s - 70 (25%)
1960s - 77 (28%)
1950s - 90 (32%)
1940s - 12 (4%)
1930s - 14 (5%)
1920s - 3 (1%)
1910s - 1 (1%)

The peak is still in the early '60s, and the curve is very nonsymmetrical.

Now all the way back to my first SS:

1968 CW SS - WA3IYC - 79 QSOs, 14 sections.

1960s - 30 (39%)
1950s - 25 (35%)
1940s - 2 (2%)
1930s - 20 (24%)
1920s - 1 (1%)
1910s - 1 (1%)

Now it looks really weird.

Of course all of this isn't very scientific. My equipment and skills 30 years ago were quite different than today! But there is some sort of trend.

73 de Jim, N2EY

How about that?

Source record: 93160
Cross-posted to: rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I have two roller inductors. Both Porcelain. One is a very large unit capable of handling very high power. The roller is 9.5" long and 3.5" wide, it has about 80 turns of wire. The contact rides on a glass rod. Very smooth turning, and in excellent condition. It will handle from broadcast band all the way up past 30MHz. This would be great for a large amp or a large antenna tuner. $175 shipped.
The second Roller is much smaller but equally the same quality. The roller measures 4" long by 2" wide with 24 turns of wire. This would be great for a smaller tuner or transmitter up to a 2KW+. $75. Both these roller inductors are in excellent shape. I just changed my mind on the project I was working on. 73 Chris VE3NGW/W4 Florida

Hello folks,

The following are some emails that Mike, KK6GM, and I have exchanged. We'd be glad to hear from anybody with more info on this subject.

You wrote by email:

>I'm also interested in beam deflection tube mixers, but I haven't built
>such a receiver yet.

Go for it!

> I did pick up some 6ME8s (and 6EH7s BTW) from a
>recent AES sales flyer, after seeing the impressive noise resistance
>figures in an RSGB Handbook (only 1500 Ohms for a 7360).

SS claimed noise figures of under 6 dB at 29 MHz in a receiver with no RF stage. That's more sensitivity than can be used in most locations. A 7360 mixer is actually quieter than most pentode tube RF amplifiers.

>I've also got
>lots of identical crystals in a few 5 and 9 MHz ranges, so now I *just*
>need to come up with a design and some time to make it happen.

I don't know what your favorite bands and modes are, so I'll just describe what I would do. (I operate almost all CW, favoring the 80, 40, and 20 meter bands, but also interested in 15 and 10, now that we have some sunspots again).

I'd suggest a single conversion design, starting out with a balanced beam-deflection mixer feeding a ladder filter at 9 MHz. Then two or even three stages of 6EH7 IF, with another ladder filter in between the stages. With no RF stages and only a single mixer, the noise figure of the IF amplifier is very important. Then a product detector (I use a 6GX6 circuit), and then the audio. And of course everything depends on the parts you can get, and the other resources, like test gear, that are available.

A 5 - 5.5 MHz VFO will let you receive 80 and 20 meters. Premixer LO generation will get you the other bands (see below).

>BTW, what do you mean by "Premixer LO generation"?

Well, here goes. Please pardon me if I'm explaining stuff you already know.

In designing multiband ham gear, the problem of how to cover the various bands is a big one. "Modern" gear solves the problem by upconverting to a high first IF (typically about 70 MHz), then downconverting to a second IF of 8.83 or 9 MHz. The required LO frequencies are generated by a synthesizer, which permits all kinds of neat features like memories, digital readout, etc. But the price

paid is extreme complexity and phase noise. "Classic" or "boatanchor" rigs use one of three other methods.

The oldest solution is to change the tuning range of the tunable oscillator. This works, but you sacrifice stability, and the design of the tunable oscillator becomes both very complex and a compromise of many competing factors. An example of this method is the Swan 350 and 500 transceivers.

The next method is to use double conversion with a "variable" or "tunable" first IF. The various ranges to be covered are first converted to first IF by means of a crystal controlled first LO, then converted again to the second IF by means of the second LO, which is tunable. This method was first used by Collins. In the Heathkit SB-100 and its cousins (SB-101, SB-102, HW-100, HW-102, etc.), for example, the band to be tuned is first converted to the range 8395 - 8895 kHz by means of a crystal oscillator whose frequency is 8395 kHz higher than the top edge of the band to be covered. Then the range 8395 - 8895 kHz is converted to the 3395 kHz IF by means of a tunable oscillator with a range of 5000 - 5500 kHz. This method works well, but requires a good bandpass filter at the tunable first IF, and a pile of crystals. (One of the reasons the Collins S-line covers only 200 kHz at a bite is the difficulty of building a decent bandpass filter at the low first IF chosen). The real disadvantage of this method is that there are at least two stages (the two mixers) before the crystal filter. And usually there is a third stage, the RF amplifier, before the mixers. This limits the dynamic range performance of the receiver.

The third method is to use a "premixer". To obtain the different frequency ranges needed to tune the various bands, the output of a single-range tunable oscillator is mixed with the output of a crystal oscillator, in a mixer that handles only oscillator signals. This permits using a single conversion design. The Drake 4 line used this method. The only problems are the need for bandpass filters that select only the desired output of the premixer, and a premixer design that can produce the needed output with a minimum of spurious outputs.

In the above described receiver with a 9 MHz IF and a 5-5.5 MHz VFO, 80 and 20 are tuned by feeding the VFO output directly into the mixer. To receive 40 meters (7-7.5 MHz), the VFO signal could be fed into a "premixer" along with the signal from an 11 MHz crystal oscillator. The resultant output (sum) would be 16-16.5 MHz, which is 9 MHz higher than the range to be covered. 15 meters would use a 7 MHz crystal oscillator, giving an output in the range of 12-12.5 MHz (9 MHz below the range) and 10 meters would use a 14 MHz crystal oscillator to get an output of 19-19.5 MHz. (Three more crystals, at 14.5, 15, and 15.5 MHz would be needed to cover all of 10 meters). As a bonus, the 19-19.5 MHz output permits covering 30 meters as well.

The real challenge in all of this is finding a magic combination of frequencies that will not cause problems on one range or another. For example, one has to be careful to avoid harmonics of the oscillators falling in the tuning ranges. For example, in the above receiver, we might try to cover 12 meters (tuning range 24.5-25 MHz) by mixing the 5-5.5 MHz VFO with a 10.5 MHz cryatal oscillator, to get an output of 15.5 - 16 MHz. The trouble is that the third harmonic of the tunable oscillator is 15-16.5 MHz, and unless the premixer is

designed to have extremely low harmonic output, the premixer output signal will not be "clean" enough to be useful.

My homebrew rig (see Electric Radio for July, 1995) uses the premixer principle in a unique way. It's a CW only transceiver (built on about 5 chassis) that covers 80, 40 and 20 meters and has 100+ watts output. All hollow state except for two 1N34As in the SWR bridge.

The receiver is a single conversion design with an IF of 1400 kHz. The VFO tunes 4900 - 5150 kHz, which permits covering 80 CW directly. For 40 CW, the VFO signal is mixed with the output of a 3400 kHz crystal oscillator, producing in the range 8300 - 8550 kHz. For 20 meters, a 7600 kHz signal is used, giving an output of 12500 - 12750 kHz.

But that's not all. The 4900 - 5150 kHz VFO signal is sent to a "transmitting converter", where it is mixed with the output of a crystal oscillator at 1400, 2000, or 9000 kHz (80, 40, and 20 meters, respectively) to get output on the desired band. This output drives the transmitter (12BY7 driving a pair of 807s). All of the crystals have trimmer caps across them to permit exact adjustment of frequency. This permits transceive operation. Works pretty good, too. And I built the whole thing (receiver, transmitting converter, transmitter, and power supplies) for less than $100.

I just came across a box of industrial pull tubes. Nothing exotic here, but thought someone might have a use for them. I would swap them for a 40 channel cb radio, some low Z mics, a vertical 10/11 meter antenna (base), or just about anything with enough wires to keep me happy. Most of the tubes are pulls, but there are a few new ones in the lot. Thanks for reading and happy holidays...which ever politically correct one you might observe.

Hi all,

As the other end of this exchange I'd just like to fill in a little detail. I'm curious to hear how any of you would design a HF tube receiver today. My interest is in good performance without 25-tube complexity. My own notions lean towards a single conversion design using beam deflection mixer (no RF stage) and a homebrew crystal filter. I was also thinking of using a 6AS6 dual-control pentode as a product detector. Nothing new here, obviously. I haven't settled on bands covered or how I'd switch bands, and I know there's lots of room for discussion there. I've also been thinking about using readily-available toroids in the RF and IF circuits, rather than less-available IF cans, adjustable coils, etc. So, anybody want to start tossing in some experiences / ideas / opinions?

73,
Mike, KK6GM

Chris OM,

Do not be misled by advertising claims of tuners being "2KW" or such,
and
then looking inside to see what size components they are using. Those
claims do not usually represent reality, especially at matching
extremes.
Most of the components used in commercially made ham radio tuners I have
seen are much smaller than would be indicated by a rigorous design for
those power levels.

Wow, give up hamming cuz the sunspots are low? Incredible. That
is when the lower bands 160-80-40 are in really FB shape. I am
now in my 4th cycle with over 20 full logbooks, and find my operation is
fairly consistent over the years, sunspots or no.

Steve...., and others if interested..... check any old downtown typewriter stores, the kind with the guy in the back with the green eyeshade on, who still has a manual or two sitting in the back. Also, check every pawn shop you can. That is how I found mine. They surface occasionally from hams, but not too often. Sometimes around ports, you can find one or two, removed from ships, but not too often. A mill for picking up the wx/tfc lists or the bulletins is still the only good way to run CW. The real ``mills'' all have upper case only and a slant bar through the zero character. Sadly, most of the real ones are not of late in very good shape.

Tons of ordinary manual typewriters are coming loose in our state surplus system at a buck each, for office manuals. They will do in a pinch.

Good luck in your quest....

Bob/NA4G

I can help with this. I am not currently doing this but have done it successfully a few times in the past. It is really not all that hard, it just sounds scary. The reference I used in an old ARRL handbook, in the early chapters where it explains electronic fundumentals. I know that mine was around 1974 or 1976.

If you can get ahold of an ARRL handbook of that vintage then I would recommend following their instructions.

73s and good luck,
Tom

Here's some more email stuff between KK6GM and myself. Anybody with more info on beam deflection tubes in receivers, please join the discussion.

OK, I'll post the emails, and identify them as such. Might get somebody with more info & experience to comment.

The station you see in the picture [Electric Radio, July 1995] is essentially the one I use today. Added a second "fifty cent filter" between the first and second IF stages - made a big improvement.

Here's the current tube lineup:

Receiver: 6EH7 RF amp, 7360 mixer, 6EH7 1st IF, 6BA6 2nd IF, 6GX6 product detector/bfo (xtal controlled), 6C4 1st audio, 6C4 2nd audio (600 ohm audio output, drives headphones). 12AU7A VFO/buffer, 6BE6 premixer, 6AU6 premix crystal oscillator, 6BA6 transmit VFO buffer amp, 6C4 sidetone oscillator.

Speaker driver: 12BH7 pushpull audio amplifier

Transmit converter: 6AU6 xtal oscillator, 6BA7 xmit mixer

Transmitter: 12BY7 Class A driver, 2 - 807 Class C finals.

Receiver power supply: 5U4 rectifier, 0A3 and 0C3 regulators

Transmitter power supply: 5Y3 bias rectifier, 0C3 and 0D3 bias regulators. 5Y3 low voltage rectifier. 2 - 866A high voltage rectifiers, 2 - 0D3 screen regulators. 115NO30 time delay relay with stick relay circuit to protect 866As.

A long way from my two tube regen and 6V6 oscillator transmitter!

I'll look through my QSTs over the next few days/weeks and post a list of articles that may be of some help. Please keep me advised of progress and any new info - I'm always in the building phase!

Gang!

I can't believe the blessing that has just been bestowed upon me! The family of a fellow ham who passed away has given me his entire HF Station. It is all Heathkit and ALL in NEW condition, with few exceptions.

I am looking for manuals and schematics for the SB301 and SB 401, as well as the SB610, SB630, SA2040 and SB220. Additionally, I am looking for a decent SWR meter for this rig, preferrably Heathkit.

This equipment was built in 1969 and he died in 71', so the usage was light and NONE since he bacame a Silent Key. If all works well, great. If not, I am told the electrolytic caps may be the culprits.

ANY input, information or leads will be appreciated. For now, I have to get studying for my Code. Talk about incentive, eh?!!

7-3,
Erv-W8ERV

Gain can be measured as DBd or DBi Gain compared to an Isotropic or a Dipole. Even a simple dipole has 1 DB gain over an Isotropic. When reading antenna mfgs specs be sure to read DBd or DBi. However, one dipole is the same as another.

4891. PRC-25 / 77 Re-Trans Cable Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-12 00:00:00 UTC
From: Don Gray <dgray@sympatico.ca>
Message-ID: <6qvc2.882$CE1.4001718@news21.bellglobal.com>
Source record: 92935

Hello, and thanks for reading this.

Does anyone know what the re-trans cable that goes between two PRC-25s or 77s for relay / repeat operation consists of ? The connections are obvious enough, i.e. receive audio to mike audio, retrans to ptt. But what about audio level ? Is there a resistor capacitor arrangement in the cable assembly to reduce the audio level into the mike circuit and limit the level of the 150 hz tone coming from receive ? When I try audio straight through I get the received 150 hz tone from the receiver added to the 150 tone from the transmitter. The result is terrible audio so I must have something wrong.

Thanks for any help you can offer.

Regards,

Don,
VE3DGE

These have been sitting around my shop for too many years. Somebody who needs them can have them for $5 each plus shipping. All are in original boxes and have never been used.

(1) Burlington modulation percentage meter, AC rectifier type, reads 0-75%. Stock no. R16-m-1915-19. A funky old meter (from 1951 according to the box), one of those made in a sort of rounded Y shape, about 4.5" across (at the widest part of the Y) and 3.25" vertically.

(4) Jewell 5" 0-1 ma movement, calibrated in GPM. Beautiful--mirror scale. 2% FS accuracy. Comes with sheet explaining how to adapt meter for various current and voltage measurements.

Best, Avery W4OGK

Lowband/6 meter equipment for sale:

RCA Series 1000 mobile radio, model CMFM7MMRNC. 100 watts, presently on 39.xxMHz. Complete system with 4 frequency scanning control head & bracket, speaker, mic, mounting tray, and control/power cable. Has optional noise blanker option. Also includes complete, original RCA 700/1000 series lowband service manual set in three ring binder. Clean, complete, working when pulled a couple years ago. $75.

RCA 'Supercarfone' mobile, model CMFA50N2TT. 50 watts, 45-54MHz split, presently on 47.98. Complete system with 4 frequency 'integrated' control head with mtg bracket, speaker with mtg bracket, mic, mic hangup box, mounting tray, control and power cables. Also includes complete, original RCA Supercarfone/Superfleetfone lowband service manual set. Radio is very clean, head and cables complete, but a little dirty and worn. Working when pulled a couple years ago. $60.
Both for $115.

Equipment is in southern NH; I would be glad to show it if you're in the area. Prices plus shipping. Check in advance or COD (at cost) are both fine.

If the system has had only about two years of use and then unused for 27 years, it wouldn't hurt to replace the electrolytics. Also, spray the connectors and sockets with contact cleaner.

While you're at it, check the solder connections. I've seen Heath kits that worked great for years then failed because a poorly-soldered connection finally came loose. (In one case, it involved a couple of wires wrapped around a solder lug that had never been soldered!)

Hello Casey,

You sure got that right! Repeaters are great for when they are needed (extending the range of portables and mobiles), but it's not the same as direct communication. Also, a considerate op must always be ready to relinquish the machine to any and all comers.

There's also something special about using homebrewed, restored or converted gear. Stuff that you made work, and that you really understand.

>And yes, there is something special about CW. Not because it's nostalgic,
>or because CW operators are a bunch of elitists, but because CW QSOs are
>invariably more friendly and relaxed, and because copying requires enough
>concentration to leave your mind completely clear and relaxed when you're
>done.

I agree 100%!! One the one hand it requires concentration, and on the other hand it's relaxing.

I have a theory about CW sending, as well. I think most people (well, me, anyway) can talk faster than they can think. So in a conversation they either babble on, or say "ahhh" and "umm", or blurt out stuff that was better left unsaid. CW lets you slow down and think about what you are saying. Even at 40 wpm with a good ops that know how to abbreviate, there's time to think.

>Is the crystal the best option for a oscillator? Or could you use
>a hybrid circuit with a 555 timer oscillator?

Hello,

I don't think a 555 will operate at the frequencies needed. The stability needed requires either a crystal or a well designed LC oscillator.

Contrary to popular belief, it is not difficult to build a tube type VFO in the 5 megahertz range with decent stability (drift of less than a few hundred Hz, total) IF you can get decent parts. My personal favorite is the W2YM VFO circuit.

W2YM was/is Bob Hanchett, of RCA. He described a cunningly simple but stable VFO using a 12AU7A.

His original article appears in QST for October, 1960, page 11, titled "Stability with Simplicity". This article also appears as part of the ARRL book "Understanding Amateur Radio". The VFO tunes 3.5 - 4.0 MHz. The main complication is the need for two regulated voltages (+75 and +180, obtained from two VR tubes in series). Output is only about a volt, so a buffer amplifier may be needed.

W1ICP, Lew McCoy, took the W2YM circuit (with proper credit to the source) and made "An Easy To Build VFO", described in QST for February 1962. McCoy's unit adds a 6AU6 buffer/doubler, and simplifies the sheet metal work. I built a near copy of this unit, and it works really, really well. I used the tuning capacitor from an ARC-5 transmitter to get a nice slow tuning rate, and added a relay for control. It is now in the "reserve" pile, because newer homebrew gear has superseded it.

My current rig is a one-of-a-kind homebrew CW-only transceiver. If you get Electric Radio, it's shown in the July 1995 issue. For the main VFO, I used the W2YM circuit, with components scaled to give a tuning range of 4.9 - 5.15 MHz, which is what the design required. (It's a long story). The tuning cap is from a junked BC-221 frequency meter, with a series capacitor to limit the tuning range. (I don't pull plates out of variable capacitors). The VFO box is made of 1/8" thick aluminum plates, held together with 3/4" X 3/4" x 1/8" aluminum angle and about a gross of 6/32 screws, lockwashers and nuts. The dial is a short cylinder of Plexiglass tubing 6" in diameter. Tuning rate is less than 4 kHz per turn, stability is very good, and it was cheap as dirt to build - but

not quick to build!

I have for sale a very nice condition R-390A receiver. It has a Capehart corporation serial #2791 tag on it. The front panel is very good - even the paint around the rack mounting holes is not chipped. The entire radio is very clean. No covers, but BOTH meters are in place and correct. Price: $450., or perhaps an interesting trade (not interested in strange military gear). For pick up only at Greenville, SC. I won't pack it for shipping.

Hi, I do repair on the old gear, including your Drake series. Take a look under the chassis and see if there's a bare lead coming out of the RF coil for 40 and that it's touching the copper chassis. I've found several troubles in these rigs from that, both transmit and recieve. Another place to check is the bandswitch wafers that handle the recieve front end coils. Sometimes the contacts either are bent or just not making contact.

Good luck and write if you need help.

4975. Drake 2B Power Transformer F.S.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-13 00:00:00 UTC
From: Carter Grabarczyk <k8vt@ameritech.net>
Message-ID: <36741DE0.DA7EC8E4@ameritech.net>
Source record: 93006
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a brand new power transformer for a Drake 2B receiver (and I guess it would work for a 2A or 2C also). When I obtained this from Drake, they told me that this was the very last one they had (the last new one in the world ? :-)

I thought I would need this, but did not. I was told the radio had a bad power transformer, so I checked with my Fluke DVM set on "beep on continuity". Sure enough, no beep on one of the windings, so order from Drake. They had ONE left-my lucky day! Well, silly me- the beeper only works below 70 ohms and the (good) secondary of the original transformer has a resistance higher than that. So, here I am with a new transformer surplus to my needs.

I know that most of you don't like "auctions", but on the other hand, I hate to make it an "e-mail race" (whoever has the fastest ISP, gets to read their mail first, etc.) So, I'm sort of in a quandary as how to fairly dispose of it. If anyone has some ideas on a fair way to do this, let me know.

Anyway, I would like $35 + 2 bucks for postage for the last in the world, brand new 2B (A,C ?) transformer.

73/Carter/K8VT

Sorry for all the crossposting.

Can anyone help ID this Eimac "mystery tube"?
The base and size are similar to the 4CX250
(for reference). The tube is marked in pencil on the
ceramic (though not shown in the scans)
"X2017Z Sample #2" and is similarly engraved on
the flat heatsinked top.

2 photos can be seen at --

Just got a Silvertone "Standby" communications receiver. Looks a lot like an RME 70...uses 6K7 era series tubes. Two dials, main and bandspread, S meter, BFO, etc. Metal cabinet.
I estimate late 40s...I suspect rare
Was Sams or Riders around then?
I tried Sears, but they don't have it (darn!)

Any help would be welcomed.

Matt

4981. eBay: Hammarlund HQ-110, near mint

I have a 390 which I have been storing for ever with hopes of using. However, the time has come to get rid of some things, I simply can not store any more (that is a direct quote from my wife, lovely woman that she is).

I don't have a clue as to what I should ask for this radio. It is a 8.5 - 9 in looks and the last time I powered it up it worked. There were some scratchy pots and things like that but it did pull in a signal. Before I send it to anyone I will make sure it still works and get you some signal strength readings from my shop monitor.

The radio is complete with a case and the heavy duty feet. The case has several scratches and dings in the paint. I counted around 15 and all are much smaller than your little finger nail. The paint is still fairly bright and I have done some cleaning but not anything major. As for the radio it's self, there are almost no scratches or marks on the face. There is a fair amount of paint worn off the knobs, not scratched but worm. And, behind the main tuning knob there is a place in the face where the operators finger nails have warn away the paint. It starts at about 11 o'clock and continues around CW to near 4 o'clock. The lettering is still nice and white.

If you are interested and/of have a suggestion for price please e-mail me. The serial number is 754 and the unit was built by Motorola. the case serial number is 28. I could be talked into shipping, you pay the costs, and would consider delivering within 200 miles for gas money. Maybe 25 bucks or so.

Let me know if you have questions or are interested, I might also be interested in a trade. I will take photos for the serious shopper.

Thanks,

Bill, N5WO

Hey MAK, MK, Marc, Mark, Earthlover (on Ebay)

Who are you ? You don't even know!

I called you a "Rude Bastard"!! Not just a "Bastard"! You have no interpersonal relationship skills at all! That's why I didn't end up dealing with you, because your true self came shining through!! Who the hell want's to deal with a "Rude Bastard"! You oughta see the responses I have about your criminal behavior! Remember San Jose, Mark Karlak?

Just take your medication! And chill out!

BB Wolf

PS- I'm done with this!. Please Folks, look out for this psycho!!

5008. TRANSMITTING TUBES For Sale/Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-14 00:00:00 UTC
From: jsbasb@aol.com
Message-ID: <19981214003809.05962.00001627@ng-cf1.aol.com>
Source record: 92884

I have several transmitting tubes for sale or trade. All are without boxes, except one (a RCA 829B). I have no way to test most of them, however the filaments test ok in all of them. The tubes are : two RCA 4-125A/4D21 ;one Amperex 6155 (similar tube as the 4-125A) ; one Amperex 5894 ; one RCA 829B (in the RCA box) ; two Machlett brand 2C39A ; two Machlett brand 7289 (similar tube as the 2C39A) ; one Trak brand 6897; one Amperex 7580W /4CX250R (also there are two more of these tubes, or at least I think they are the same, as the markings are gone on the two) ; two RCA 866A (these test good on a TV-7 tube tester) ; two Westinghouse 812A (these also test good on a TV-7 tube tester).

Some of the items I'm looking for are : a military GRC-109 receiver/transmitter/power supply, in three black boxes. Also the Navy test set AN/US M-3A-this is the test set that includes a Weston tube tester and a number of other tools packed into one relatively small case.
Please let me know if anyone has an
interest in the tubes, or If anyone has the items available I'm looking for.
Thanks !

Hello,

I recently picked up a used DX Engineering LP-20
(large!) log periodic antenna, without the docs. My understanding
is that this company is out of business... Can someone mail or
fax me the docs or tell me where I can obtain them?
I'd be glad to pay for your trouble...

many thanks,

Source record: 92904

My 11 Yr. old son is studying hard to get his novice license. He has $75 saved up so far for a radio. I am hoping somebody out there has an old tube transceiver he can buy to get on the air with. Looking for:

Heathkit HW-100 or HW-101, SB-100 or SB-101

Drake TR-3, TR-4

Tempo One grey or blackface

Condition of radio not extremely important. A fixer-upper is o.k. as long as all parts are there and it includes manual and schematic.

Scratches and bad paint on cabinet is o.k.

E-mail me Mark KB4AEP at crslex@iglou.com

Thanks

5033. FS: HQ-170

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-14 00:00:00 UTC
From: rswitzer@att.com
Message-ID: <753u8gjpc1@nnrp1.dejanews.com>
Source record: 92909

FS: Hammarlund HQ-170, no clock.

Ham Bands receiver.

Cosmetic condition fair. Front looks good. There are very minor scratches,
unsure if knobs are original, but they're all present and match each other.
Plastic dials are good. There is a small dent on the top of the
cabinet, not on the front panel. It never bothered me :-)

Electrical condition fair. I used it for working 80 meter AM and
it was excellent for that. 40 meters seems to be out of alignment, but works.
The other bands seem ok, but I did not spend time on them.
I never opened the cabinet since I purchased it from someone else on
the net, so I am unsure of the internals. S-meter is fine.
Pots/Switches seem to be ok. I've owned it a couple of years and used
it at least once a month, sometimes more.

I have a photo-copy of the manual (in a plastic soft-binder).

$100 plus shipping from 07724 including bubble-wrap, peanuts and
a new box.

Payment to be made by Postal Money Order or cash. If a check is written,
I will wait for the check to clear before sending. Money back minus
shipping costs if returned within 1 month in the same condition as
sent. Notification prior to return is required.

I don't check this account on nights or weekends, so please be
patient.

Thanks,
Robert KA2CZU

Happy Holidays and 73's to all the good folks out there in the Ham NG's.
Just trying to sell/ swap my tubes here instead of putting them on EBAY.
Had 1 bad experience with 1 person and GOOD experiences with all the rest.
Am I a bad guy? My feedback rating is POSITIVE 64 on Ebay so judge for
yourselves.
I tinker with audio gear and am just getting into radio.
All the folks I've met in ham radio have been some of the best people I've
ever met anywhere. I'll get my ticket soon and boy will I be able to build
1 heck of a final. I've made alot of friends I look forward to chatting
with.
Take care,
Marc

5040. Re: RCA lowband/6 meter equip. FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-15 00:00:00 UTC
From: nuvistor@aol.com
Message-ID: <19981214214308.11331.00001113@ngol07.aol.com>
Source record: 92832

Saw your post and was wondering if you could help me out. I have what I think was the driver and final amp from a RCA carphone that operated at about 49 MHz. The driver has one transistor and the final has three in parallell. The markings on the driver are 3457163-505 and three variable caps marked 25C2, 25C3, and 25C6. The transistor in this stage is marked 3457118 G RCA 7C . The final is marked
3457164-502 and has 4 variable caps marked 26C1, 26C2, 26C5, and 26C6 . The transistors in this stage are marked M (Motorola logo)3457210-912 Also included are TP1 TP2 and TP3 as well as L1 L2 and L3. I have searched all over for info on these things, but have always come up dry.
What voltage do these stages operate on? From what I remember these radios had an inverter system that supplied a few different voltages on transmit, but my memory fails me.What wattage levels do they need as far as input vs. output? I gutted an old, incomplete radio and the stuff has been in the attic for years.
I haven't seen ANYONE that could possibly help till your post came along. If you need copying costs or anything just let me know. I'm also replying to the group in case someone else may have the info I seek. Thanks in advance!

A few days ago I posted a RFI on the above topic, which returned some useful information. Based on that, I have done a little research, and found out a little more, which may be of use to those of you who may have to deal with it.

The active ingredient is copper naphthenate, a copper salt of naphthenic acid. It has an LD50 (a dose rate that caused death in 50 percent of tests) on mice and rats, of 2g per kg of body weight. This is not really regarded as toxic, an LD50 of 0.01 g/kg would be regarded as toxic. The copper salt was used in varnish at the rate of 8 to 20 percent. Since it only takes a very few grams of resin to coat an HRO coil pack, then it would appear to be difficult to get a lethal dose from this route.

The coil packs smell because the copper naphthenate is slowly decomposing - even after 50+ years - to naphthelene and copper salts. The naphthelene, is of course the active ingredient of mothballs. Hence the smell.

Copper naphthenate is used in wood preservers, being a copper salt it gives a green appearance, and is in wide use today.

Hi Paul OM,
Any SSB transmitter can generate FSK by inserting two tones into the audio chain. The audio tones must fall within the audio passband of the transmitter. Its RTTY performance depends on the opposite sideband suppression and carrier suppression. The TS 520/530/820/830/430/440 all will run RTTY, but the TS820 is better, because it has direct FSK built-in, unlike all the others, and so does not require any use of AFSK at all.

73 and Merry Christmas

Don, W6JL

Hi,

I'm looking for whatever information I can find including mods for a
motorola twin V rig. Model #15166V-24A.

This one is set up for 31.530 mhz. I'd like to get it down to 29.4.
Please respond by E-Mail

Tim, KJ7AZ

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works.. xxxxxxSOLDxxxxx
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501
COLLINS T217 gr/r27gr/md125agr xxxxxxsoldxxxxxxxx
Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set xxxsoldxxx
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

make any resonable offer to
kevin

From: n3xbu@aol.com
Message-ID: <19981216101847.01834.00000051@ng120.aol.com>
Source record: 92783

I have a C-line and an S-line...TR4-C and 32S-1 with 75S3. I like them both and operate them both for different reasons. The S-line does not drift. The S-line elicits complements by virtue of the name Collins. The Drake gets great audio reports. The Drake has a better AGC. The Collins has a more sensitive receiver. The Collins is built like a tank. They are both easy to work on. The Drake is cheaper to find parts for. They are both great rigs with a cult-following. I'm selling both to make room for other boat anchors. Probably a T-368 and an R-390. Try ' em all. Life is short!

5096. Adding an S-meter to a Hallicrafters S-38

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-16 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <758pbi$a9c$1@remarQ.com>
Source record: 92788
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

A friend recently pointed me to a Hallicrafters service bulletin that explains how to add an S-meter to Hallicrafters radios such as the S-38, S40, etc., which lack a meter.

It's pretty easy -- only three components are required. I incorporated the instructions in my S-38 page:

http://www.accessone.com/~philn/halli08.htm

Running the modified set on an isolation transformer is an excellent idea, as the manufacturer suggests.

Cheers.

Phil

>and description. Thanks.

Rick, according to the Dachis guide, there were several models in the S-38 series with black cases. The original S-38 had a smooth black finish. The end of the S-38 run, just before the S-38A, had what Dachis describes as a black wrinkle finish (I have one of these and would call it more of a black powder finish). The "A" model had a smooth black finish, and the "B" model had a black wrinkle finish.

Good luck in your search!

5111. Fix for loose plate caps?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-16 00:00:00 UTC
From: Mike Silva <mjsilva@jps.net>
Message-ID: <7591fkfsb1@its.hooked.net>
Source record: 92803

Hi all,

I know I've seen this discussed before, but dejanews doesn't find anything so pardon my asking again. Is there a "best" adhesive for remounting loose plate caps? I've used superglue for loose bases and it works well, but will it handle the heat of a plate cap? I seem to remember epoxy and some kind of automobile engine adhesive being mentioned.

73,
Mike, KK6GM

5119. Re: TS-520 RTTY?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-17 00:00:00 UTC
From: "Robert A. Poff" <bpoff@suscom.com>
Message-ID: <3679124C.CEDC8EA9@suscom.com>
Source record: 92720

The 520 will work fine on RTTY using AFSK.

I think I'd only run about half power (about 100ma on the plate)
to save
some wear and tear on the power supply.

The old convention was to ALWAYS use LSB. If you use USB, mark
and space
will be reversed (new speak: data inverted).

In reference to the TS-820 on RTTY....
I bought mine in 1977 specifically because it ran FSK. But found
out
later it was easier just to use AFSK. Number one reason was to
change
shifts (170/850 cycles) you had to take off the bottom cover and
move
a jumper. And few miles away you really can't tell the difference
anyhow.
As long as your carrier is properly suppressed.

Hmmmm.... with all this talk about RTTY I might have to
drag out the ST-5 and 28ASR! Might be fun!

5124. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <75b8ot$qnl@news.Hawaii.Edu>
Source record: 92725
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6OO, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi Gang,
I'd like to trade my National NC-125 with matching speaker and
original manual for a Halli SX-117. The NC-125 is in good cosmetic
and working condition, with many of the old leaky caps replaced
(only where needed). Never modified.

I am only interested in an SX-117 that is in good to excellent
cosmetic condition with no mods. Working or not.

Steve WA4DUT/6
p.s.-I will not sell the speaker seperatly...please don't
bother asking.

exc to new cond $25

Collins Speaker---this is thought to be either a 270G3 or possibly a mil
version for the Airforce---ratty shape, needs a repaint and new grill
cloth--e-mail pix available---I want $100 as is, speaker itself is good
and works fine, no tears or holes in cone.

All the above plus either UPS or USPS as required. Thanks and
Merry Christmas to all.
Craig

5130. Help-SB-610 Heathkit

Newsgroup: rec.radio.amateur.boatanchors

Very Srs mios:
I have a Heathkit SB-610 Monitor
Agradeceria if someone of You can indicate me the connections
of the Hind Panel of the SB-610 as should be accomplished for power
to handle the Monitor with thetransceiver and power to see the se�a�es
of audio that they proceed of other stations of radioaficionados.
A detailed explanation of the Hind Panel of the SB-610 and where
and where they should of be connected in my Transceptor., to use it
correctly since DO NOT have of book of Instrucciones. -
Thank you very much .

Hi Paul OM,

Today there is no need to use anything but 170 Hz shift, so changing jumpers is only done once (I did mine over 20 years ago). Also, using FSK eliminates many potential problems (listen on the air any day and you will hear much of this!), due to RF feedback into the audio. (Apparently many ops today using AFSK lack the knowledge to know how to adjust their audio levels properly and/or listen in another receiver to detect distortion/spurs/multiple tones on their signal). Lastly, the TS820 automatically reduces power level when switching to FSK mode, as well as automatically selecting the narrow (CW) filter, with the centering of the filter automatically changed to fit the passband of the 170 Hz RTTY signal.
Use of wider shift than required wastes RF by putting much of the transmitted energy (clustered around the mark and space frequencies at low data rates such as RTTY and TOR) outside the receiving station's receiver passband. This increases QRM and the band of frequencies your signal will occupy, to no advantage. This also reduces sig/noise ratio at the receiver, and with weaker signals this does make a difference.

73,
Don, W6JL

>missing something here.

Many of the inexpensive Heath and Eico scopes suffered from stray magnetic deflection by the power transformer. There is not much you can do about this except find a mu-metal shield like those supplied on Tektronix and other professional scopes. I had an old 5 MHz, TV alignment Heath scope many years ago that suffered this problem. The deflection was quite small but it was noticeable. I was able to minimize this by moving the transformer location slightly. Alternately, you might consider experimenting with making your own shielding out of soft iron. Be sure and demagnetize it before mounting it near the CRT.

I've been running RTTY on my TS-520 since the mid 70's. Never had a problem so far. Since about 1981, I have had mine "computer connected" to an old Radio Shack Colour Computer II. By today's standards, that is hardly a computer or much of a RTTY station, but it still works. I agree about reducing power, the duty cycle for RTTY can be hellish on the 6146's. Especially if you start sending text pix of scenery. Boy some of those guys were good. Have fun with it and AFSK is by far the simplest way to get on the bands to see if you like it.

J.W. Miller AT2500 automatic antenna tuner:
Manual/automatic tuner
3-30 MHz @ 2500+ W
4 coaxial outputs including bypass
Wire antenna output
Illuminated power & SWR meters
Auto tunes <15 sec with as little as 1W drive
Remotely controls linear in/out
Visual & audible alarms for high SWR
Automatic linear cutout if high SWR
Adjustable SWR threshhold for linear & alarms
Separate directional coupler
With manual

$450 + freight, or will trade for Heath SA2500.

Unit works fine and looks good. Digital pix available.
Email for more info.

5171. help aligning FM on Hallicrafters SX-42

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-18 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <75e2tr$f4c$1@remarQ.com>
Source record: 92633
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Perhaps some kindly SX-42 owner out there could help with this. I'm trying to improve the FM alignment on my SX-42, which has been recapped and works wonderfully on AM.

I have a good oscilloscope and I just acquired an old sweep generator. I want to try aligning the set visually as described on page 9 of the Sams folder, but my photocopy is so muddy that I can't see exactly where to attach the scope's probes (points A and B shown on page 2).

For discriminator alignment, my sweep generator manual seems to suggest that the probe should be attached to pin 4 of V9, the 6H6 discriminator tube. Is that point B as described in the Sams folder?

I haven't aligned a radio this way before, so any advice is welcome. I made a couple of attempts to align the FM using a signal generator and multimeter, but it's hard to get it just right using that method.

Thanks!

Phil

> Most unlike the US Navy! Thanks for any info you have. Craig

You forgot the most important fine print that should be on the tag.
It should be stamped on a line midway through the metal nameplate tag.
It is easier to crossref that way.

``Part of Model xxx Radio Receiving Equipment.''
or Transmitting

That model number gives quicker readout as to what it is. The crossref
indexes can be a bit hairy.

How big is it? That can tell if it is a receiver or transmitter dynamotor.

What is its operational voltage (should also be on the tag). That can tell
what kind of gear it may have gone with.

That limits it to two series of GE mobiles. Yes, they are very confusing
at times, and I work with them daily. The Mastr if a black case with a
footprint
about a foot square, is as far as I know referred to as a "Mastr Exec" There
was a later version of this with Solid State PA called the Mastr Exec II
line.
(its case color is beige, similar to the Mastr II line)
The is also the MASTR Pro that came out after the Progress Line (which was
all tube). It is in three sections - RX, PS,TX - and is dark blue in
color. The
Royal Exec is physically similar to this as well, but is all solid state and
low
power -- only if I remember correctly, which I may not.

I will not even mention the TPL, or "Transistorized Progress Line" which was
a very buggy early solid state design.

The answer to your question - the conversion to 6 meters can be done,
but is best if the radio is of the correct split. I may have some info
around
on some of the older units if you will give me the Combination Number on
nameplate of the radios.

From: marijimc8381@my-dejanews.com
Message-ID: <75ei0ikpa1@nnrp1.dejanews.com>
Source record: 92639

SBE model number 45 - someone out there in radio land has one of these or knows of this old girl. I really need three pieces of information concerning it:

1) What was original color of cabinet, front panel, etc. 2) What was original color of knobs 3) About when would this radio have been made? An EIA date code type number on an electrolytic suggests 52nd week of 1941. I am skeptical of this as a wet lytic is not likely to have lasted this long. But there are no other conventional date codes on other parts. Use of quite a few mylar capacitors and the type of carbon comp. resistors suggests a much later date of manufacture, or, a complete replacement of the original resistors and capacitors with more modern styles. Uses loctal tubes so it could have been 1930's, 1940's, or even 50's I suppose. 40's more likely. Can you help? Surely would appreciate any information you might have. Oh yes, it probably had a matching speaker box as well - any info? Thanks, Jim marijimc@axs.net

5187. Re: J38 Wiring Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-18 00:00:00 UTC
From: "Cystel O. Dywod, esq." <willi6@erols.com>
Message-ID: <367B018A.436@erols.com>
Source record: 92649

The following explanation is based on an article from "The Vail Correspondent", published by Tom French, W1IMQ. The January 1995 issue had a comprehensive article on the J-38. It specifically addressed the mysterious base terminal strip and eye-screw.

Look at the key from the top with the knob towards you and the terminals away from you.

The telegraph "Line" would come from the right and connect to the Right-Hand terminal on the key, and the Right-Hand terminal on the base. In a Morse code practice mode, the "line" would go to a terminal panel on a Model BD-114 Switchboard, and from there to a keyer and tone source (typically a TG-10, TG-34, etc.)

The Left hand Side of the Key Terminal and Base Terminal would go to a Headset. When used in a morse code practice mode, the headset (HS-16, to be exact) cable would attach to the eye-screw in order to relieve the stress or tension on the wire and pin jacks.

Although the J-38 was used in many different modes and connections, a large number were apparently intended to end up in the Morse Code instruction environments of the military services. For that reason, the base was set up to enable that to happen with a minimum addition of bits and pieces.

I use the glass from Coleman gas camping lanterns with my 4-400s.
They come in two sizes, I'm not sure if the larger one will
fit over the 4-1000 or not.
They are cheap (like 1/10th the cost of what Eimac wants)
so you could get one and give it a try.
I got mine at the sporting good dept. at Wal-Mart.

Picked up an Eico 460 scope circa 1964,to add to the BA test equipment
and have spent many hours trying to track down a problem..
Prehaps someone used to scopes can give me a clue...

The trace has a ripple on it, significant enough so that if I put
audio into the scope It does not seem to affect the signal put into
it other then the signal follows the sine wave. For example the trace
is wavy and if I impress a low level audio signal on it the signal
looks OK but it is impressed upon (not mixed with) the ripple sine
wave. I have replaced all electrolytics and every bypass cap that
seems to be part of the affected areas. All I need to do is flatten
out the trace. Can anyone with scope experience give me an idea ? I'm
missing something here.

thanks and 73

Another "maybe" is hum from vertical amplifer filiments. It may be a
good experiment to disconnect the vertical deflection leads to see if
the ripple remains. If it goes away, its in the amp, if not it is
likely the stray magnetic field mentioned in another posting.

Source record: 92760

Hi Rafael,

You will find a schematic of the Heathkit SB-610 RF scope on:
ftp://bama.sbc.edu/boatanchor/downloads/HEATH/SB-610a.gif

This doesn't answer all your questions, but works as "first aid".

Please respond with your postal address and I will send you copies of the
manual.

Wiring the scope for receiver monitoring is a bit more complicated, as the
scope was "hardcoded" for a certain IF frequency, by the time it has been
assembled. But these changes should be easily performed by a ham radio
operator and I could also provide you with details.

Merry Christmas to you and your nearest and dearest!

5222. Help: VHF signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-19 00:00:00 UTC
From: mumble@dogbert.ucdavis.edu
Message-ID: <75fm4rekj1@mark.ucdavis.edu>
Source record: 92664

I hope I'm posting to the right group.

Recently I _found_ behind a science building on my university campus a Hewlet Packard VHF signal generator model# 608F (hooray for decommisioned lab equiptment). I understand basic concepts of how broadcast type equiptment works. I think I've gleaned enough of that working at a radio station. My question to those of you who know what to do with this stuff: what do I do with it?

With a signal generator do I need anything more than a signal amplifier that has high enough modulation to modulate video to broadcast a video signal out of it (well, an antenna, too) ? Or are there more components I'd need. I'm not really looking to get anything expensive, I'm just curious to know how to use this and learn a bit about broadcast equiptment.

Also, is there an easy way to see if this thing is still working? When I turn it on the tubes warm up and glow...so that's encouraging, but I don't really know what test inputs and outputs I could give it to...well test it. I also have (from that same scavenging trip) a General Radio Company low frequency three-phase oscilator type 1305-A (calibrated by JPL amazingly enough...in 1974, and the sticker says do not use after March 23 1975, Ha!)...so I could give this signal generator some inputs to test it with.

Any help would be appreciated. Thanks

5223. Help: HP 608F VHF signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-19 00:00:00 UTC
From: mumble@dogbert.ucdavis.edu
Message-ID: <75fmpg$g93$1@mark.ucdavis.edu>
Source record: 92665

I just found one of these in a pile of decomissioned lab equiptment behind the science building on campus and I want to know what I can do with it.

I've been told all I need to transmit video with it is a signal amplifier that can modulate (a lot) a video signal...and of course an antenna.

How much would it cost for me to add the components I'd need to broadcast VHF video out of this thing? Thanks.

Also, if I decide not to use it, how much is something like this worth?

thanks,

mumble

5228. R-390A Repro Nametags FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-19 00:00:00 UTC
From: Tom Marcotte <marcotte@iamerica.net.nospam>
Message-ID: <367BAAF7.2B97@iamerica.net.nospam>
Source record: 92670

I had a bunch of repro tags made up for the guys who got rigs with no
tags at all.
To avoid confusion with the originals, the tags are made with a unique,
factual,
but generic design. The fit and finish are just like orig of this
size. The size is the common short, fatter type. (Sorry, I don't have
any of the long skinny type for the very old rigs).

The repro R-390A tags are 1" x 2.5" etched aluminum, and they read this:

RECEIVER, RADIO R-390A/URR <== this type is
larger

DESIGNED BY COLLINS RADIO COMPANY
CEDAR RAPIDS, IOWA
FOR SIGNAL CORPS, U.S. ARMY

NSN 5820-00-538-7555 <== this type is
larger

115/230 VAC 48-62~ 220W

The tags are protected by a peel off plastic coating for protection of
the paint during shipping.

They tags are $9 ea, $16 for two, or $35 for five. Price includes
screws, lock washers, and shipping.

From: Sir Robin <nexus15@flash.net>
Message-ID: <367D4565.187B@flash.net>
Source record: 92679

For Sale Ten-Tec Argonaut 509 Transceiver.

Transceiver works well. Physical configuration and condition is as follows: Unit is configured with the add-on 245 CW filter PCB mounted inside the transceiver NOT in an external add on enclosure like the 208. Selection of the CW bandwidths are selected by a rotary switch located on and thru the rear panel.

Front panel is about a 7 paint wise. Paint at top edge is scratched off at numerous locations but this cannot be seen looking at the front. Control markings are fine except for the AF Gain and Power off lettering. It should be AF GAIN and POWER ON-OFF. It is .. .AIN and PO... ON-.FF Dots(...) specify incomplete of missing letters. Plastic dial is great as is the VFO knob and skirt.

Rear panel is OK but some lettering is not complete. Power in has been modified to a DC coaxial connector and antenna has been changed to a BNC.

Inside is clean.

Comes with an original manual, power cord, and hand microphone.
I am asking $190 shipped.

Please contact me direct with inquiries. Thanks...Rick...W5RH

5238. FS: Galaxy V Transceiver & VFO

5245. HELP!! Heathkit HW-101 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-19 00:00:00 UTC
From: "Chris A. Dennis" <chris.dennis@NOSPAMmci.com>
Message-ID: <367BD19C.311A09C@NOSPAMmci.com>
Source record: 92687

I'm a newcomer (tech plus) to the hobby of amateur radio. I have been using this unit for a few weeks now and have had no problems until recently. Is there any harm in rolling the VFO knob way past the "stop" indicators on the dial? I think my kids have been messing with it and not sure if that has caused a problem. I can't tune up on 10 meters. I can't even receive on 10 meters. I can receive signals on the other bands, but seems like everything is way off.

Thanks,
Chris / KD5EIA
chris.dennis@mci.com

Hi,

I understand there was an article or series of articles in either 1990 or 1991 Electric Radio detailing modifications to the Viking Valiant. Could anyone on the list supply me with a copy of the article(s) or copy of the magazine? Willing to pay reasonable copy and shipping costs.

Thanks,

From: Jim Mullen <jmullen@map.com>
Message-ID: <367bdbdb.0@news.newsfeeds.com>
Source record: 92704

Hi,

Not sure if this qualifies as boat anchor, but I can't find any references to the rig in my archives. A local ham called me with questions about a Yaesu FT301, I think it is all solid state. He doesn't have a manual for that specific radio, and had questions about power output etc. Anyone have any info?

Thanks,

Jim Mullen - WA1ZUH

>chris.dennis@mci.com

Chris: I don't think the kids could have done any damage by turning
the main tuning knob beyond stop, but they may have been playing with
the zero set button at the same time, thereby messing up your dial
calibration.

As for receiving on 10, how about trying to tune the driver selector
knop a bit. The kids may have messed up the setting of the knob on
that one. Just fiddle with it a bit to see if you can peak up on ten.

I have a working HW-101 sitting here. Let me know if you need any
more help.

5268. Heathkit Active Audio Filter FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-20 00:00:00 UTC
From: lmarti49@linknet.net
Message-ID: <lmarti49-ya023580002012980848210001@news.idt.net>
Source record: 92568

Model HD1418 Active Audio Filter -- dates from 1988.

Assembled solid-state unit in mint condition. Attractive design. Has bandwidth settings for CW, SSB, and RTTY. The CW filter includes a tunable notch/peak filter with variable BW. The unit also has high and lowcut capabilities to get rid of "rumble" and "hiss". It has its own audio amplifier.

Very dark brown metal with red and white lettering--no plastic! Coordinates with the Heathkit rigs of the era. In perfect cosmetic condition. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers shortly after I assembled it. You get the manual with it.

Asking $100

Chris: also check therubbers that connect to the caps on the driver selector. If they are old, they break and need replacement. If they are broken, you cant tune the driver selector.. I hve used neoprene washers for replacement.

kevin

5280. Help on electrolytic labeling

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-20 00:00:00 UTC
From: Doug Allen <goforit@worldnet.att.net>
Message-ID: <75ji1s$8oq@bgtnsc03.worldnet.att.net>
Source record: 92580

I'm trying to replace older electrolytics with some modern ones that I recently bought. My new radial electolytics do not indicate plus (+) and minus (-), but rather are in small blue cans with a gray stripe along one side corresponding to one of the radial leads. Within the gray stripe are elongated zeros. My obvious question: which side is positive and which side is negative? What symbol is the elongated zero and what does it signify?
Thanks.
Doug

5281. Homebrew Paradise - everything you always wanted to know about radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-20 00:00:00 UTC
From: Harry Lythall <no.one@no.where>

Source record: 92581

Homebrew Paradise - everything you always wanted to know about radio
homebrew (and distillation)

Yep, it has been a long time time since I posted an update, mainly because I have been quite busy these days. With up to 400 visitors A DAY you can imaging the amount of E-mail I am getting! One day I will post some of it. I have had a few laughs. For example " ... and can you design, build and send me the PCB foil pattern and schematics for a stolen suitcase alarm?".

A few months ago my wife bought me a digital camera so I am now able to illustrated the hundreds of constructional projects on the homepage. The latest is an all CMOS 4000 series (3 chip) frequency synthesiser which can cover about 6Hz to 4MHz. There is also a 0.75uV PD sensitivity FM band receiver and even technical data on the ZN414 and ZN416 ICs (in PDF format). The URL? Sorry! There are three:

http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo
http://www.geocities.com/SiliconValley/3569/

I hope shortly to introduce a kit of parts for the TDA7000 receiver (no coils required) as well as to be able to supply a PCB artwork ready for making the PCB, in exactly the same way as the FM Wireless Microphone project. I'm working on it.

Will post another update when the next few projects are added.

Best regards Harry, SM0VPO

5282. TS520S and TV502 Xvtr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-20 00:00:00 UTC
From: k1zat@dsport.com
Message-ID: <75jlpkdqn1@clarknet.clark.net>
Source record: 92582

I came into possession of a TV502 and a TV506. I've connected them as the books say but can't get any response out of them. The TS520S manual does not give an indication of the 520s' metering is suppose to do when trying to tune one of the x-verters up. I suspect I dont have the drive levels from the 520s that I should.

Anyone have expereince with this combination and point in the direction to go ?

jd

Wobulator, cor that takes me back. A Wobulator is a swept frequency oscillator. Use of such will allow the alignment of bandpass filters to be observed.

I've seen stacks of these at the Gaithersburg hamfest for $15 and they
didn't sell. Still, its a nice sig gen and the price is right. To xmit
video, try connecting a video signal to the external AM modulation input on
the 608. I don't know if the beast has enough bandwidth to xmit decent
video but it's worth a try. 73 John

Sounds like a little code practice buzzer might have been placed there as an "aftermarket" modification by the previous owner. I recall such a buzzer made in the 60's that had a (approx. 2 1/2) round base and cover and looked vaguely like some sort of relay.

Just a guess....

Hi Jeff: About 99% of the time, when I go to this page, it is totally blank, and my browser shows no errors; it indicates it is "done" loading. Today after I saw this link you posted, I went to the page just fine. Then a few seconds later, I went to the B&W transmitter page, which was blank....hit the back button to return to the main listings, and the page was gone again. Is this something on my end?? It only seems to happen with your site. Just curious.

Happy Holidays,

Cary Fries

From: wb9gkz@aol.com
Message-ID: <19981221144216.28208.00003007@ng14.aol.com>
Source record: 92523

Dear Santa,

How are you. I am fine. Is Mrs. Clause OK. Is rudolph still glowing. Good!

I want to tell you that my Knight Span Master that you brought me last year is working very well. I have lots of QSL cards from many countries. My Dad went nuts when I got an envelope from Moscow with a program schedule. He thought I was going Communist!

Could you please bring me a Knight-kit Star Roamer this year? I am getting sick of tuning my Span Master with hand capacitance. The audio has a big hum in it that hurts my ears when using my Lincoln headphones. I called the man at Allied in the Point Loomis shopping center but they didn't want to talk to a kid. The Star Roamer has a real S meter in it! I can practice my Morse code with it too. I made a key using metal from a soup can and a pine board.

If I can't get the Star Roamer could you bring me a Midland 100 milliwatt Walke-Talkie. My friend Scott got a CB base station for his birthday last week. He can talk to me with it. I want to connect the Walkie-Talkie to my 50 foot long wire so I can get out. Please include the AC adaptor.

I would like a Heathkit GR-64 shortwave radio if you can't get me the other stuff. I have only seen it in the catalog. It looks just like the Star Roamer.

Please bring my brother and sisters the things they need.

Pat

"Yeah, right", you say. I know these things are difficult to find, but there are probably some of them coiled up in the corner somewhere!

Our ARC-5 display is almost complete, but we need some remote tuning spline shafts to go between the control box and radios! If you have any to part with, please drop me an e-line!

Merry Christmas

Shew

As others have noted, a primitive swept-frequency RF source. Particularly cool was the method used to obtain
sweeping action: a motor coupled to the tuning cap, which had no end stops, so, continuously varying frequencies as the cap spun.

Years ago, I ran into a sweep/marker generator for TV alignment that had
a part called a wobbulator in it. It appeared to me to be some kind of
motor-driven variable capacitor.

HI RON...I HAVE RESTORED SEVERAL OF THE VT-71 SERIES, THE PART NUMBER IS
17A470303, I HAVE NEVER FOUND ANY SURPLUS OR OTHERWISE. ON EARLY TS-4
CHASSIS IT IS DESIGNATED R-80 ON THE OCTALBASE 3 TO 4 200OHMS, 1 TO 5 37
OHMS, 2 TO 5 105 OHMS, 7 TO 5 105 OHMS. ON THE LATEST TS-4J CHASSIS
IT IS DESIGNATED R-159 ON THE OCTAL BASE 3 TO 4 200 OHMS, 1 TO 6 37 OHMS, 2
TO 6 105 OHMS, 7 TO 6 105 OHMS. THE RESISTANCE VALUES ARE
COLD VALUES, I HAVE VARIED THE VALUES A LITTLE DEPENDING ON VALUES I HAD IN
THE JUNK BOX, 20W
RESISTORS OR BETTER WORKS, IVE BUILT A PLUG IN TREE WITH LOTS OF SPACING FOR
COOLING, OR IVE USED
THE DALE CHASSIS TIPE
MOUNT WITH
A WIRE HARNESS GOING INTO A MALE OCTAL PLUG. BOTH OF THESE METHODS ALLOW
AN ORIGINAL BALLAST TO BE USED AGAIN.... HOPE THIS HELPS ......73 ERNIE
K7BTZ

Hello--
I recall seeing another wobbulator variant-- a loudspeaker-like device
with a variable capacitor plate attached to where the cone would go.

And, an electronic version: the Increductor, which used a modulator coil
to alter the properties of a tuning inductor. Kaye Elemetrics used
these in certain sweep generators.

I said no further communication and I meant it. Oh
well. Guess you better start filing an action in small
claims court. You waited six months during which
time you never said you wanted the antenna after
I told you to tell me when you wanted it and I would
get it down. Then, you apparently either got a better
deal on another antenna or simply decided you didn't
want mine. During that time my antenna was off
```

the market so I'm out the interest on my money for
those months as well. If you weren't such a jerk
we could have settled this without a problem but
since you chose not to do so then you'll just have to
bear the consequences.
No further correspondence from you will be read.
Merry Xmas
Tony N7BG

5333. FS: Military surplus

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-21 00:00:00 UTC
From: bry@NOSPAMmnsinc.com
Message-ID: <367db768.4112672@news.mnsinc.com>
Source record: 92597
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

For sale:

Military Surplus keyer, model F16-K-49161-1001.
Interesting boatanchor what's-it - Keyer/selector/amplifier
assembly, with eleven miniature tubes on a small chassis
approx 6" X 9" x 3". Has Chicago Transformer output
transformer Class 1A, some 400V capacitors.
Tubes are types - OA2, 6AQ5 (2), 6AL5, 12AX7 and 12AU7.
Most of the tubes are there... a couple are missing.
Looks like it was remote controlled. Several potentiometers,
a lamp jack? (991) and switch etc. Approx 1955 vintage.
Also has a storage tag mentioning 1961.

I hate to throw this away, so will sell for $10 if anyone would like it.
It has to be worth that for the parts at least!

If no one claims it, I will send it to the dumpster!

Bry, AF4K

Please do not send me ANY SPAM!

Contact n3xbu@aol.com for more info!

The following are all collectible/working/very good or better condition and ready to ship just in time for the holidays!

Most of the Bakelites are selling for around $100 each. Email for specifics.

Silvertone 1949 brown Bakelite Am Broadcast Model 9000

RCA 1940 Model 65X1 Brown Bakelite

Emerson 1955 Model 812 Gray

Granco Model 704 circa 1963 AM/FM

Zenith 1958 Model 6B05 Beige and Cream

Philco Cathedral circa 1937 Model 60 Wooden, Dark Brown $235.00

RCA Victor Bakelite 1935 5 tube Midget

Motorola portable 1957 in red leatherette Model 5P32R nice/rare

Zenith 1941 AM/SW 5 pushbutton 5.5-18 MHz and BC Model 6551

GE Musaphonic 1954 Model 921 in gray plastique

Schaub Lorenz 1956 "Goldy 250" similar to Telefunken

Trav-ler 1941 small 2 knob brown Bakelite

RCA Victor 1955 portable light green plastic "His Masters Voice" emblem Model 6BX6

Truetone AM Model 0281

Arvin HI-FI 1956 Deco-style metal case very nice and unusual Model 3586 AM 14"x10"x10" app.

Telefunken Jubilate 1964 light wooden cabinet SW/AM/FM Model 5351W

Studebaker AM in-dash Car Radio circa 1963 Chrome with white knobs

I told you it was a big list! Read on for Ham stuff...

Vibroplex Bug 1960 marked on bottom "The Original, Standard" Gray wrinkle and Chrome some minor pitting of chrome, some chips on paint, overall good condition $75.00 shipped

Millen Grid Dip Meter with 5 coils in box looks good untested $50 shipped

12 volt Power supply like new, Basecom 10 $40 shipped

Hewlett Packard Freq. Counter Model 5382A up to 225 MHz Looks/ Works Great $225 shipped

A pair of Turner 454C Microphones Good condition Gray unamplified (plus two style) $50 shipped for both

Drake TR4-C with AC-4 in MS-4 Cleanest anywhere works marvelously $350 plus help with shipping

Cushman Model CE-5 o'scope/communications monitor/IF/RF sig generator/ Digital readout/ Works and Looks Great, no face cover, nice piece of test equipment VERY HEAVY better pick this one up...offers?

Collins Winged 32S1, 312B4, 30L1, 516F2 in case with speaker, 75S3 with ssb and narrow cw filters, all Collins Collectors Association very good condition, Looking Great and On The Air Daily $2,000 prefer pickup in Pittsburgh

Collins 0-800 milliamp meter in box, like new, don't think it has been used, marked Collins Radio Company $35 shipped

All items guaranteed working or money back less shipping if returned at your expense in original condition within 10 days

Items can be seen and used in Pittsburgh

Happy Holidays from Susannah N3XBU and Brian K3VR

Need a "spinner knob" something with a crank on it (or maybe an indent for a finger), about 2" diameter, preferably black and cosmetically appealing.

Need this to facilitate rapid band changes with a tuner using a roller inductor.

Tnx/73

Just got a hollow-state version of the RG-11 receiver shown in Fred Osterman's book. Clearly, the tube version is the R-11 which I now own. Uses a lot of Collins ideas, including having an orange-can PTO. Tuning dial is a lot like a 51s1.
Anyway, it needs refurbishing/repair.
Any source for a schematic and manual?
Tnx

5342. DRAKE TR-4C NOISE

From: Tom K4AKC <topdog@advicom.net>
Message-ID: <367DA44D.D17@advicom.net>
Source record: 92606

My TR-4C has developed a hissing type noise in the receiver, even with the antenna disconnected. Turning down the receiver RF gain brings the noise down. I've checked a few tubes in the receiver circuitry, but haven't found a bad one yet.

Are there any particular tubes to suspect? 3rd mixer and 3rd IF? Is it likely to be something other than a tube? What goes bad on a TR-4C? Any ideas on what to check?

Tom K4AKC

5345. Re: TS520S and TV502 Xvtr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-21 00:00:00 UTC
From: ve6inm@my-dejanews.com
Message-ID: <75lsqr$an9$1@nnrp1.dejanews.com>
Source record: 92609

I have a TS-520(no suffix) that I use with the TV-506 and TV-502. Make sure that they are daisy-chained in the correct order - TS-520 to the TV-502 to the TV-506. I know with the TS-520, I had to do a mod to the trasverter jack so that the drive was switched from TS-520 to the transverters when they were powered on. This allows me to keep the screen grid switched on all the time. Tune up the 520 on 10mx as you normally would (with the transverters turned off), peak ALC, dip PLATE, peak LOAD, adjust MIC and CARRIER as needed. Turn on the transverter you wish to use (this will turn off the SG to the finals in the TS-520), and select the band you want on the transverter, say 50mHz. Peak the TS-520 ALC meter reading by alternately adjusting the IF TUNE and DRIVE controls on the transverter. My transverters pump out between 5 and 10 watts, depending on the freqs being used. If the TS-520 is operating correctly, then the drive levels going to transverters should give you an indication of a few watts. Hope that will help you out. 73 de VE6INM (Glenn)

: As others have noted, a primitive swept-frequency RF source. Particularly
: cool was the method used to obtain
: sweeping action: a motor coupled to the tuning cap, which had no end
: stops, so, continuously varying frequencies as the cap spun.

With Respect;

Wobulators could have all sorts of variable L or C devices. One of the earliest was a downlooking FM radar (WWII) used as a (low altitude) altimeter, worked around 70cm but I cannot remember the designation. This used a "loudspeaker" type of variable capacitor. The Rohde & Schwarz Polyskop used a variable permittivity (sp?) "swept" by a magnetic field. Modern microwave swept sources use a similar technique (called a YIG oscillator). Mechanical or electronic variable frequency determining devices in an oscillator constitute a "Wobulator!"

Merry Xmas

A metal-cased tube would have been my guess, but again I don't know the
S-108.

But the comment about the 6H6 reminds me that I have one that is red
instead of the common black. It strikes me that red colored metal tubes
were not common, and I'm wondering if anyone has any comments about them?

I have the following tubes that I would like to get rid of. They are
all thyristors, most are untested because of high voltage applications:

1 Knuth 3C45
3 Westinghouse WL678
1 Electronic Inc C6J
1 Sylvania 6D4 NIB
1 RCA 2050
1 GE 2D21 NIB
7 various 2D21 tested, OK

Will consider interesting trades or reasonable offer. Thanks, Harvey

The red-cased metal tubes were type 5693 (IIRC). These were part of a series of high-reliability tubes for critical applications. RCA called them "Special Red" tubes, and they were commonly used in air traffic control gear, computers, and industrial equipment. I think the 5693 is a replacement for a 6SK7. Other tubes in this series were the 5691 (6SN7) and 5692 (6SL7). These types were glass envelopes, with a red colored micanol base. Beautifully made, with heavy mica spacers, plenty of supports, and heavy duty cathodes for long life. These tubes are now in demand by the tube audio folks, who claim all kinds of "sonic improvements" from them.

Just follow through and take him to small claims court. Ask for the $100
plus any expenses such as the filing fee that you can claim.

With Respect;

You need not use a variable inductor or capacitor to build a wobbulator
(= sweep oscillator) or even a VFO.
See ART 7*, fig 45 pg 149: GW3JNA VCO based on 'turns' cancellation.
This is fb for low frequencies where variable capacitors would be rather
large, but I have also tested in on VHF in a 70MHz FM TV modulator

*Amateur Radio Techniques, G3VA, RSGB 1978 - it is based on comments
from 'technical topics' with some additonal information, it is probably
one of the best books for experimenters, a later book (but different) in
this series is the "Technical topics scrapbook".

Happy Holidays,

I have a nice Ranger (late model with the keyer tube)
that looks real nice, has good audio and keying and a repro
manual. No holes,dents,serious scratches or other nasty
cosmetic problems. All original knobs. It has the PTT mod
installed but the relay coil is open so I had to bypass that
to get it to work normally. 160m-10m and gets grid drive on
all bands. It puts about 30w into the old B$W load.

TIA Dan N8ETQ Cleve.,Oh. dharlan@ameritech.net

5366. NEED DATA ON SWINGING LINK

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-22 00:00:00 UTC
From: Paul Cooper <pcooper@primenet.com>
Message-ID: <368061A4.D1FDD720@primenet.com>
Source record: 92483

If anyone can identify the following impedance, I would appreciate it:

This is a swinging link coil used in the old push-pull designs made by
E. F. Johnson Co.
It has 5 turns of what appears to be #14 copper, the inside diameter of
the coil is 3.5", the width of the coil is 7/16". The coil is mounted
on a small plastic part about 1/16" thick, and it's measurements are
2.5" x .5", the connectors are very small banana jacks which are 7/8" on
centers.

These banana jacks plug into a female banana jack receptacle on a
phenolic bar which is 5 5/8" long and 1/2" square. The bar is attached
via a hinge on a metal bracket which attaches to the push-pull coil
mounting bar.

I need to know the impedance of this winding. I surmise that it is
either 300 or 450 ohms.

Would appreciate any information.

Paul, K6PY

Hi Rick,

Randy has a special brother and I am sure he knows it. It is very difficult when someone close is ill. The best thing is tothink positive and keep one's mind busy and active. Ham Radio is a wonderful source of entertainment and keeping in touch. I trust Randy has a rig and can listen in and maybe get some QSO's in? If not, why not see what you can do to get him on the air at least listening. Have a good Holiday and all my best to you, your brother and families.

Hi J.D.
Hopefully you have all 3 manuals for the 3 units and necessary connection cables.
Have you checked if the 520S has been modified per instructions in the TV-502 manual and has the interconnecting cable been modified per instructions in manual???? Double check the interconnecting cables to make sure that they are in the right jacks.
In any case have you checked out the 520S to see that it is working perfectly by itself??????
Have you set up the 520S unit per the instruction manual making sure that you are on ten meters and checked the amount of power you have feeding the transverter.
For 2-meter operation with an unmodified
520S make certain the the SG switch is set to OFF and the HF antenna is disconnected.
I have a TS-830S,TV-502 and TV-506 setup and it works fine.
If you run into major trouble, I have the operating/owners manuals and the service manuals for all three units.
Good luck and If I can be of any assistance please let me know.
73 de Mike K6STU.

From: Brian Webb <no-spam-bmwebb@tima.com>
Message-ID: <75ociqheu1@topsy.kiva.net>
Source record: 92554

I have a question about electronic tubes. What are they?
I was cleaning my Hallicrafters S-108, pulling tubes, cleaning and such, when I notice one of them was very short and not a tube at all. It was metal, crimped along the bottom. On the side is said something about it being Electronic.
Is it a solid state version of a tube?
Is it possible that there is solid state replacement tubes available for these old radios?
Just wondering...

Thanks for looking,
73s
Brian

Please don't be offended, but your question reminds me of a recent conversation with a young guy at my office, who had just bought one of the new VW beetles. I looked it over in the parking lot, and thought of my college days. I made a comment to the owner that I had had one of the original beetles when I was his age, but that, of course, the engine was in the rear. I expected this would be a statement of the obvious, but he looked at me like I was either an idiot, or that I took him for a fool.

After a few seconds thought, I realized that he was an infant when the old beetles were retired, and shouldn't be expected to know...

To get to the point of your question, I believe the item you describe is an electronic vacuum tube, after all. All radio vacuum tubes can be described as "electronic". A lot of the older radio vacuum tube designs were made with metal jackets to provide both electrical shielding and protection for the glass envelope. When the transition to "miniature" - 7 and 9 pin - tubes was made, the integral metal shield was dropped to save cost and size. A lot of 40s and 50s era radios incorporate both miniature and "octal" (large 8- pin) base tube designs. I don't know the circuit for an S-108, but my guess is that you have a 6H6 dual diode on your hands. 6H6s have an octal base, metal shell, and stand about an inch high when plugged into the socket. These were used a lot in AM detector circuits and AGC rectifier circuits.

Hi Simon,

I would like to help you with this as I work in the same city as RACAL Canada. Is this the older SBX-121A (Spilsbury) SSB radiotelephone unit. Could you be more specific as to the location of V9 (I assume it is a tube?) i.e. what module is it on? I called Racal this morning and they couldn't locate V9 in their doc. Let me know and I will call them again.

Regards,
Paul

Hi, I've been trying to add to my collection of Radio Handbooks.
I've just discovered the joy of the 'Radio' Handbbook as well as
the trusty ARRL Handbook. Do you have one gathering dust that
you might want to sell to a collector?

I'm interested in pre 1959 ARRL Handbooks *Not all years of
course.
I'm also interested in the 'Radio' Handbooks (As published by the
folks from Radio Magazine) Except for the 9th and 11th editions.
I don't mind notes written in them etc but I'm not interested in
books missing pages, covers or dunked in the tub.

If you have a good Handbook to sell, won't you E-mail me the
condition and price expected?

Hi Brian,

Without any more to go on than "Electronic", I can't be sure if it is a solid state replacement or not. Some vacuum tubes said "Electronic" on them as well. There may be more distinguishing marks elswhere on it. If it just has a tube number on it (eg. 6H6), it's probably a tube.

There are several vacuum tube replacements out there. I have seen receivers with ALL the tubes replaced by these. You might or might not have one in your hands. Hope this helps.

Radio Randy

wobbulator is wellknown in the countries using German instruments, some
other German words are Pegelmesser (Level meter) and Pegelsender
(Precise signal generator), usually the output level is in Neper, dBm,
dBU (0.775V) in selectable impedances of 75, 120, 150, 300, 600 ohm

I believe Philips used the term "wobbulator" for some AM IF sweep
equipment, I bought one just for fun at last vintage auction in Oslo.

Some old circuits used motor to rotate a capacitor (SCR-522), also used
some German Pegelsichtgeraete - one sweeping audio frequencies, and
another sweeping 10-1000kc/s in slow motion with oscilloscope screen

Hi, sorry for the multiple post, but while I have you here maybe you can help.
The back panel of my 101ZD looks horrible, alot of oxidation is on the gold
color metal.
The rest of the rig is very clean. What is there if anything I can use to
restore the
metal to a decent appearance? Will it have to be re-plated? If so I would just
leave it alone. It only bothers me when I need to plug something in!
P.S. As soon as I get my tube stuff together, I will be taking my tech exam.
Thanks for your help....73, JOE

Depends on these factors:

1. Have either been modified from original?
Drill holes? Replaced connectors?

2. Condition? Clean/complete?

3. Accessories or shock mounts present?

4. Nomenclature (name) plates present and good?

5. Do the serial numbers match?

I have an opportunity to purchase one of these for under $50. It is a tube based, crystal tuned Conelrad receiver that is housed in a metal cabinet (approximately 19"Wx 10"Hx15"D). I didn't get a brand name or model. Can anyone tell me if this is collectible, and is the price reasonable? Thanks in advance. Art.

5402. Hallicrafter SX-28 without psh-pull output?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-23 00:00:00 UTC
From: garyw@fc.hp.com
Message-ID: <75ri8f$84j$1@fcnews.fc.hp.com>
Source record: 92379

I recently acquired an SX-28 and found that is has only a single 6V6 output tube. There is a metal (auto body-like) plug in the chassis where one would normally find the other tube/socket. There is no evidence that this radio has been modified.

Also, the area containing the "Model SX-28
the Hallicrafters inc.
Chicago USA"

logo is cleaner than the rest of the front

panel as if it once had a different tag attached (screwed in place). Were there military versions of this radio that used only a single ended output (for better reliability? they only used it with headphones?....)

Just curious; thanks for any help.

Gary

Hi Art,

Most definitely a decent radio! Absolutely collectable! Worth it's
weight in gold ? Naw! Shortwave Receivers Past and Present (1997) list it @
$ 90-110 used. But prices are going up quickly! Snag it if you can!

Good Luck and Merry Christmas!

Hey Guy's:
I bought one of these, it was "intermittent." Eico uses a phenolic washer between the
variable capacitor and the chassis. This one had worn thru aging. Replaced the old phenolic washer with a plastic one and the unit works like new !

A very good friend needs one for some half-wit military resurection project.

I'd be willing to pay a lot, say $12 plus shipping, for one of these.

And for the puzzled readers a dynamotor is a combo dynamo-motor.

You put in, say, 12V @ amp.s to run the motor & out comes, say, 300V @ itsy current to run tubes. They sound like hair dryers when running.

They're not as practical as hair dryers.

Thanks,

Marty 404-365-9280 or marty@ba-watch.org or here

Hello--

For what it's worth, my copy of the Telefunken Laborbuch (dated 1958) includes a circuit for a "wobbler" for 10.7 MHz on page 224. The circuit consists of an oscillator stage and reactance modulator (both implemented with type EF800 tubes).

Even though I don't speak or read German, I consider this nifty little blue book a worthy companion to RDH4.

Greetings all.....
An automatic direction finding radio fell into my hands, a Sitex Koden type 511. I have never heard of this radio or its manufacturer. The set receives up to 5 MHZ and seems to function normally. My problem is the direction-finding antenna layout. Anybody know something about this beast?

Merry Christmas all,

Keith, ve3gem densmore@idirect.com

Keith, this company is heavy into marine radars and affliated
equipment. The radio you have was maybe designed for
search and rescue work. Check to see if they have a web
site, or look in the phone book under the marine electronics
section.

5436. F.S. Heath HA-14 linear amp w/a.c. p.s.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-23 00:00:00 UTC
From: David Rogers <dr7zyq@nidlink.com>
Message-ID: <3680DCA9.42DE@nidlink.com>
Source record: 92502
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale: Somewhat rare and fun HA-14 linear for 80 through 10. This unit has a separate power supply (a.c. and d.c. are available, a.c. is included). I have been told that this is basically an SB-200 with the power supply on a separate chasis. The purpose was to allow the amp to be used portable or mobile, with the main unit light enough to be mounted under the dash. This unit is in excellent condition with some flaws (e.g., it had a mod that put a hole in the front panel which has been filled with a chrome plug -- and looks very nice). It is now back to the original circuit and tests just fine on the bench. Uses a pair of 572B's.

Includes the original amp manual and copy of a.c. power supply manual.

$400.00 plus UPS. UPS will probably be about $30.00, because the weight of the power supply dictates the use of two boxes for shipping.

Thanks,

David, WA7ZYQ

x-no-archive

Hello, I have the following for sale:

1) Collins 75S1 receiver. WE CCA good. S/N 261. With copy of manual.
$300 + shipping

2) Collins 32S1 transmitter. WE CCA good. S/N 2050. With copy of
manual. $300 + shipping

3) Collins KWM2 transceiver. WE CCA fair to good. S/N 176. No manual.
$450 + shipping

4) Collins 516-F2 power supply. WE CCA fair. Copy of manual. Needs
rectifier tubes (5R4 and 5U4). Case has a small dent in the rear.
Front trim ring looks good (no scratches). Untested due to no
tubes. $150 + shipping

5) Drake 2B receiver with 2AC speaker. Copy of manual. Receiver is
very clean -- a good collector sample. Speaker is average. Tested
on 40M and 20M -- very good receiver sensitivity. $150 + shipping
(thought this was sold, but buyer never replied to emails)

Prices are firm. No tire kickers please. All items from an estate.
I am willing to trade ALL (as a package) for a modern HF rig specifically Yaesu
FT-920, or Icom 756, or Ten Tec Omni VI. Would also consider other trades, but
only really interested in HAM GEAR (no computers, no cars, boat motors,
pistols, no tools, you get the idea).

Thanks and happy holidays,

Joe K7JOE
Portland Oregon.

Or howbout "takes four D batteries which are hard to find in this area and
the nearest store is 100 miles away and it's snowing and all the roads are
closed but it looks like it would work and if not it's probably just a loose
wire or something any way it's mint except for a small crack that starts at
the bottom and comes around the front and goes across the top then down both
sides and stops at the back anyway the knobs should be easy to find sorry
for the blurry pic but I lost the lens for my camera buyer pays $40 for
packing in strong Kraft paper no refunds send cash only"

For what it's worth;

I repair amplifiers so I go through a LOT of
sweep tubes....

I currently get ALL my sweep tubes from Bob.

I have tried various other vendors but Bob
consistantly provides me with better tubes at a
lower cost than the other vendors did...

I hope everyone on this newsgroup has a safe,
happy, and healthy holiday!

5452. FS: EF Johnson AMP

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-24 00:00:00 UTC
From: David Hutchison <davehutchison@worldnet.att.net>
Message-ID: <75s7ns$5uc@bgtnsc03.worldnet.att.net>
Source record: 92402

I have an EF Johnson Courier linear amplifier for sale. The Courier supplies continuous amplification from 3.5 to 30 MHz. I believe it can do about 500-600 watts on CW/SSB with a low input power.

I got this unit in trade about a year ago and have never had time to dust it off and put it into service. The amp appears to be complete with no modifications. Cosmetic condition is about a "9" on a scale of "10." meaning no major marks, dents, dings, scuffing and the paint finish is virtually 100% intact. Overall the amp is in pretty decent shape for its age.

I will sell on an "as-is" basis, for those with an interest in EF Johnson gear who can test it and bring it into operational condition safely.

I will post it here for a few days and if there is no interest I will put I on Ebay. Buyer needs to be a licensed amateur radio operator.

Price is $100 plus shipping costs incurred from my local professional packer. This unit is heavy.

E mail if interested.

Thank you,

Dave K9HT

5453. Re: NEED DATA ON SWINGING LINK

Source record: 92403

Paul,

I can't answer the question accurately, but I do have some of those coils and the link itself is the low impedance part of the circuit, the coil it "swings into" is the high impedance part.

I'm looking for a RS-6 military radio, which consists of four separate components (receiver-RR-6/ transmitter-RT-6/ power supply-RP-6/ filter unit-RA-6) that hook up together. Does anyone have a set for sale or trade ? Thanks.

5457. FS: EF johnson Adventurer w/AM modulator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-24 00:00:00 UTC
From: David Hutchison <davehutchison@worldnet.att.net>
Message-ID: <75sfh9$h23@bgtnsc03.worldnet.att.net>
Source record: 92407

I am selling an EF Johnson Adventurer transmitter, which is a novice crystal controlled CW transmitter along with the quite rare AM modulator that was made for this transmitter.

The transmitter is in average to above average condition and shows the usual signs of wear and tear for a transmitter its age. Both the transmitter and modulator appear to be in complete and original condition. I have not fired up either piece so both units are sold on an "as-is" basis.

Since I am including the rare AM modulator the price is $250 plus shipping costs. If there is no interest in this ad I will post on Ebay in a few days or just keep it!

I am selling simply because I have too much BA stuff and not enough time to enjoy it all! Buyer must be a licensed amateur radio operator and promise to give this gear a good home.

Respond via e mail if interested.

For Sale:

Drake T4XC transmitter with AC-4 power supply. Transmitter is about an 8 -- clean, front panel very nice. Some scratches on cabinet and missing the "chrome" decorative insert that goes in the center of the tuning knob. This was a spare transmitter and has sat on a closet shelf for the last ten years. It was operating perfectly the last time I used it and no reason to expect it to do less than that now.

$225.00

Yes, and a copper tape, wrapped around your speaker leads prevents
distortion from the earth's magnetic field :-)

Thanks for the update, Bob. That reminds me of something I read awhile
back. Apparently, the military used alot of "ruggedized" tubes, early on.
Then, manufacturing techniques improved to the point that "ruggedized"
tubes lasted no longer than "off the shelf" tubes. The military
recognized this and stopped requiring "ruggedized" construction in their
specs.

Good luck finding one for 12vdc input. I think most of them were 28 volts. If your friend can use the 28 volt variety, let me know. I'll send you 2 units (28v in/250v@60ma out), plus another for parts, for $20 plus shipping. I won't guarantee them for any length of time but, if you're interested, I'll throw the juice to 'em and spin 'em up to make sure they put out (parts unit, not included in test).

It's a good idea to remove the end caps, then remove the bearing cover plates and look at the ball bearings. The grease in these gets like wax, due to age. A drop of machine oil will soften it up and renew it's lubrication properties. Due to the high RPM's of these motors, this should not be overlooked. Might also be a good time to inspect the brushes, and communtator.

Interesting! But since when is the Department of Defense interested in eliminating wasteful spending? Producing page after page of specifications for $800 toilet seats and the like keeps a lot of pentagon folks employed, not to mention the people who make the things! :)

Brian,

I have heard anecdotal reports that rubbing alum on the dial cord will
make it tighten up. You can buy powdered alum in the McCormick's spice
section of any supermarket. Let us know if it really works!

Gary, there are called Mastr PROs......They are best used as paper
weights unless you strip the rcvrs out...for about $50 each, you
can get SOLID STATE GE MSTR EXEC II or MSTR IIs with more channel
capacity and better rcvrs, etc....and less drain on the battery!

Chris

Source record: 92322

I don't thinkthe humidifiers are going to have the power to do
cleaning applications.

The small jewelery cleaners utilize 50-70 kHz audio, probably
delivering perating dozens of watts to the liquid. The larger
industrial units will operate either 25 kHz or 50 kHz and will deliver
hundreds dozens of watts or more (depending on tank size) .

To get good ultrasonic cleaning you need lots of power tp create the
scrubbing action (cavitation) , plus a suitable liquid and wetting
agent to facilitate cavitation and add chemical action (depending on
type of soil).

indeed, several German books were available free or at low cost for
radio-amateurs. For several years I received the annual
"Siemens Halbleiterbeispiele". Also Telefunken 'Taschenbuch' 1967
(Pocketbook - R�hren, Halbleiter, Bauteile) is very useful containing
100pages Radio/TV design/repair information. and several hundred pages
of detailed information on valves and semiconductors. Philips also had
some pocket books, easy to find, but usually valve data was only 4-5
lines, not much useful..... But around 1970 and onwards Motorola
parts became the easiest semiconductors to buy for hams here, and very
much application notes were available free of charge(?)

Hello,
I have the following Heathkit gear for sale. Prices do not include
shipping from Stuart, Florida 34996.

1. SB-102 HF Transceiver. Recently serviced and aligned by RTO
Electronics. Perfect operating condition. Appearance is a 9. Original
manual $275
2. HP-23B power supply. Works great. Some paint missing near output
connector.
$75 (much less if purchased with SB-102)
3. HM-104 Wattmeter. A few small paint nicks around edges. Original
manual. $40
4. SB-200 Amplifier. As close to perfect as I have seen in many years. A
little paint chipped off around edges of power switch, otherwise superb
with original manual. $375
5. IT-18 transistor tester. A little rough. Missing one micro clip on
test lead. $8
6. SA-1480 remote coax switch. Inside control box is excellent. Outside
switch unit has been outside but still in very good condition. Original
manual. $95
7. HN-31 Cantenna dummy load. Excellent condition, shipped minus oil,
with manual. $30

Message-ID: <761nr0$816$1@topsy.kiva.net>
Source record: 92334

Thanks everyone for your help.
One thing though, I can't imagine making it grip better would help. That's the problem now, it grips too good and rides up the concave area on the shaft it is looped around, then all of a sudden, it jumps down to the bottom of this concave area making a click or pop noise. If anything, it needs to slide more as it is being turned. Does that make sense?

Thanks,
Brian

You can find Dial Cord, (cleverly named eh?) at electronics stores. Radio Shack does not qualify.

GC makes a good quality dial cord. It comes on a spool, and costs very little.

Hi folks,
An announcement about the new HENRY reflector on contesting.com.
Here's how to join the group! We talk about anything related to HENRY Amplifiers.
Address a new e-mail to majordomo@contesting.com

In the body (NOT subject) of the message simply type subscribe henry

When you get the confirmation back, just copy and paste into a new e-mail the authorization information.

You will get another confirmation that you are all set and welcome to the list! Then, after you're all set-up just type henry@contesting.com to post new messages.

Hope to see all HENRY enthusiasts there!

5537. FS: Ranger Oper. Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-26 00:00:00 UTC
From: hudog <hudog@sparc.isl.net>
Message-ID: <368594D6.2449FAE2@sparc.isl.net>
Source record: 92272

I have an original Johnson operating manual in fair to good shape which is surplus to my needs. Page 9/10 are photocopied, but the rest of the manual is original. I'll ship the manual anywhere within the US for $20, a little more outside of the states.

thanks,

George

5538. FS SX110 & FLDX400 Parts Sets

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-26 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <3685A1C4.28CA@sympatico.ca>
Source record: 92273
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have been parting these sets for awhile, and this will be last call on both items for anyone who needs parts.

The Hallicrafters SX110 has the bandswitch assemble and coil section, and tuning capacitors left, (knobs, case, crystals etc. gone).

The Yaesu FLDX400 has lots of small chassis parts, final tank circuit parts, and bandswitch left, and the plastic dial window, dial and gears etc. is available (case,filter, trim etc. gone).

Let me know what you need or make an offer on the remains if you like.

5539. SB310 LMO Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-26 00:00:00 UTC
From: Self <jbollit@popd.ix.netcom.com>
Message-ID: <3685A401.57B9@popd.ix.netcom.com>
Source record: 92274

I bought an SB310 and the tuning mechanism was not functional.

I dis-assembled the unit and determined what was causing the mechanism to bind. When I went to re-assemble the radio per the instruction manual, I noticed that the LMO did not have either "end" stop. I have worked on other heaths and the LMO's all hand end stops. This one does not.

Any ideas or suggestions as to how I can get the radio calibrated and working again? Is the LMO "toast" (I pray it isn't).

Any and all suggestions or help is greatly appreciated!

Jim

Mastr Pro paper weights? Why should I use expensive II's when the hybrid Pros are dirt cheap and last virtually FOREVER in continuous repeater service. I have a mobile one with a frequency synthesizer (non-GE) add-on in my car as well, and think they're ideal for the budget-conscious ham.

I admit I recently got rid of my Prog-Line collection, so I guess I am modernizing a bit <G>. I had both T-Power and vibrator units, but not the original dynamotor version.

I run into that same problem occasionally and often its either the pulley slightly misaligned and/or the cord being too tight. Also a dab of talcum powder has been known to correct it.

Hello Friends and Neighbors,

I am saddened to report that our old buddy, Honest Injun', eBay Dave, has been practicing something shameful in his ads on eBay. Dave, say it ain't so . . . Why would you stoop so low? You are the one who is beyond reproach . . . A knight in shining armor . . . Mr. Clean.

Yet, you (apparently) hid secret messages in your eBay ads in order to have them seen by more and more and more people!! Talk about greed! Talk about bastardizing the system! This practice is more dastardly than posting eBay notices on the NGs!! It undermines the entire reason for having the search function!! It is un-American!! It has to be stopped!!

Oh, so you don't believe old Dave would do such . . . Then go to eBay and search for ANY one of the following:

ham radio transmitter receiver collins drake heathkit swan military surplus audio amplifier linear CB icom yeasu kenwood zenith philco crosley atwater marconi morse key vibroplex

I'll bet that you get AT LEAST 4 items and some of them will be entirely unrelated to the word that you searched for!!! This isn't right! It makes a mockery of the entire eBay system!! Why, it could even affect the stock price . . .

Dave, you should be ashamed . . . This is lower than low. You should apologize, repent and refrain. If not, then resign immediately . . . you no longer deserve the title of "MR. Clean"!!!

LJR

Source record: 92352

This is the 100W Lafayette two tube mobile amp, with transistorized PS
(works off 12V)
grungy condition, but with manual.
This came from an estate and all the local "hams" want solid state bricks -
any BA types out there like to play
with this one?

There are rusty patches but I think with a good cleanup it would be OK.

Anyway all I would need would be $10.00 for the shipping.

Message-ID: <3685255d.0@news3.paonline.com>
Source record: 92353

Sat for over 15-20 years, used to work fine. Electrically complete, with all tubes, knobs, at least one factory manual (might be able to find the second one.)

One has flaked paint on front panel, other one looks OK. Both need cleaning up and possibly replacement of some caps, etc. The 1" CRT's seem OK. If you're a Collins/Eldico collector these are neat period pieces.

I have no use for them since I'm more into vintage AM than vintage SSB.

Free for the taking, NO SHIPPING. Pick up in Killingworth, CT.

I have a Drake 2B receiver and 2BQ speaker/Q multiplier for sale. Overall condition is about an 8.5 on a scale of ten and is in operational condition. I am selling because I have suffered from a bad case of "accumulitis" during the past twelve months and need to prune my collection so I can actually walk around in my basement!

Should make a fine receiver for a lucky buyer.

Price is $250 for both items plus shipping costs.

Please e mail if interested. I consider offers in the order in which I receive them.

Dave

WILL SHIP FOR $425.00...252-443-5023

5566. FS: Sams Photofact Folders cheap

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-26 00:00:00 UTC
From: "Daniel J. Nelson" <djn@goodnet.com>
Message-ID: <36854653.7A3D@goodnet.com>
Source record: 92360

Found myself with 200 feet of Sams Folders. In the midst of sorting, but
have started list.

$1.50 ea #1-#30 for each folder
$.75 ea #31 up for each folder

Where a folder is #152-3, 1211-12S or 1722-1A.
These are all originals. E-mail for wants. I can look up by model number
and advise...

First class postage is added (probably $.55)

Paul Cooper wrote in message <368061A4.D1FDD720@primenet.com>...
>If anyone can identify the following impedance, I would appreciate it:
>
>This is a swinging link coil used in the old push-pull designs made by
>E. F. Johnson Co.

>I need to know the impedance of this winding. I surmise that it is
>either 300 or 450 ohms.
>

Paul,

This is a complicated question without an exact answer. It depends on
a lot of things, especially the position of the link with respect to
the coil itself. The idea of the swinging link was to give you
a variable impedance transformation by varying the coupling coefficient
between primary and secondary. What you are doing is transforming
the load impedance (antenna) to the value required by the amplifier
tubes to deliver the desired output power. You can have another
degree of freedom by placing a variable capacitor in series with the
link, and resonating it at the operating frequency.

I'd get a 1950's ARRL Handbook and study it. They also had ads
from Johnson in the back.

GL es 73,

John, K6QQ

Jim

5569. Re: Dave, you should be ashamed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-26 00:00:00 UTC
From: lrware@pipeline.com
Message-ID: <368551dd.63466988@news.pipeline.com>
Source record: 92363

ljrockford@aol.com (LJRockford) commented:

>I am saddened to report that our old buddy, Honest Injun', eBay Dave, has been
>practicing something shameful in his ads on eBay. Dave, say it ain't so . . .
>Why would you stoop so low? You are the one who is beyond reproach . . . A
>knight in shining armor . . . Mr. Clean.
>
>Yet, you (apparently) hid secret messages in your eBay ads in order to have
>them seen by more and more and more people!! Talk about greed! Talk about
>bastardizing the system! This practice is more dastardly than posting eBay
>notices on the NGs!! It undermines the entire reason for having the search
>function!! It is un-American!! It has to be stopped!!
<snip of unusually long winded rant>

Hummm, would you care to produce some examples?
E-bay URL's would be nice. That way we can all go look at it, then ask
our browsers to display the page source code, and see for
ourselves....
Nice simple way to tell if your claims are correct.

If you can't produce them, well then:
We would be forced to conclude:
1) Your anti Dave, anti E-bay rant is just that...
2) You may not be smart enough to operate a browser correctly.
3) Not having a clue doesn't effect your pre conceived beliefs, for
that matter neither do facts.
4) That you have nothing better to do over the Chrismas holiday than
troll Usenet.

Waiting to see the smoking gun (evidence.)

>Dave, you should be ashamed . . . This is lower than low. You should apologize,
>repent and refrain.
Keep that thought in mind while you try to produce something to back
up your nasty accusation.
I will also, I'll even offer an apology if you produce some proof.

-Larry

Bigot, n. One who obstinately and zealously attached
to an opinion that you do not entertain.

Uhhh John:

Gain is measured in dB, a ratio. The ratio is referenced to a unit. Engineers use the imaginary isotropic source, hence, dBi, dB above isotropic.

If you don't have an imaginary isotropic source handy, then you can use a RESONANT dipole as your reference. Thus, you can speak in terms of dBd, dB above a standard resonant dipole.

A resonant dipole has about 2.15 dB gain over isotropic, so you can say it's 2.15dBi.

And finally, there's lots of dipoles around. There is the one special case of a resonant dipole, the one you usually think of. But, any two element antenna is a dipole, and it doesn't have to be cut to resonance, and it may be made with very thick elements, or even tapered elements. A dual discone is a dipole, a biconical is a dipole, a bow-tie is a dipole.

And ultimately, remember that we all live relatively close to the Earth. Very rarely do we get to see a dipole working with free-space characteristics. <grin>

Doran:

I get pix like that sometimes. But it may not be the originator's intent. I think some monitors and/or video cards display much brighter than others. So, whenever I get one of those stealth pix, I open them with MS Photo Editor (others like Corel just as good, but more complicated than needed) and bump up the Gamma maybe 4 to 6 units. Sometimes it's amazing; knobs suddenly appear from the murk, and I can see the woodgrain of the table top. Pushing it too far results in loss of contrast, but it's usually worth the attempt.

Drake T4-X transmitter and matching MS-4 speaker with AC-4 power supply. Both units are in excellent condition, with only the usual minor surface scratches on equipment cases; not bad at all. There is a thumb-size depression on the top of the T4-X cabinet; not quite a dent, it's about 3mm deep, and the paint is not broken; you have to look for it to find it. The lower cabinet is new, just received from Drake parts. The grill of the MS-4 and the front panel of the T4-X are excellent; only a very few light scratches. The chassis of the T4-X is likewise very clean; the underside (protected from dust) is especially clean. No mods or extra holes, no missing parts. Much recent tweeking and parts replacement by a knowledgeable Drake guy. Everything works great. The transmitter puts out rated power of 200 watts on the lower bands, a bit less on 15 and 10 meters. Very stable, good audio reports, everything seems to work great. I'll be happy to demo on the air. $195 + shipping from the DC area (zip 20164). You can see pictures of this equipment at

http://www.erols.com/mike.white/tr4-1.jpg

lrware@pipeline.com (Lawrence R. Ware) dribbled:

>Hummm, would you care to produce some examples?
>E-bay URL's would be nice. That way we can all go look at it, then ask
>our browsers to display the page source code, and see for
>ourselves....
>Nice simple way to tell if your claims are correct.
>
>If you can't produce them, well then:
>We would be forced to conclude:
>1) Your anti Dave, anti E-bay rant is just that...
>2) You may not be smart enough to operate a browser correctly.
>3) Not having a clue doesn't effect your pre conceived beliefs, for
>that matter neither do facts.
>4) That you have nothing better to do over the Chrismas holiday than
>troll Usenet.
>
>Waiting to see the smoking gun (evidence.)

I try not to go after folks unless they go after me first. To wit:

Gee Larry,

You seem to have some sort of chip on your shoulder or is it between your shoulders? . . . This really isn't all that difficult . . . (this is not a step-by-step list. You fill in the blanks):

URLs you say . . . How about:

http://www.ebay.com ???

Pretty tough one, huh?

Then, just for kicks, do what I did . . . Search for "icom". Be sure to put a big "X" in the box to the left of "Search Title AND Description" because the word ain't in the description!!

Then look closely at the search results for items that don't quite fit.

What? You found one? Click on it . . .

Lo' and behold, a quick once thru doesn't turn up the word "icom" . . . Hmmmm, what if I search that single page for "icom" . . .

Once you get to that point, you can click "View seller's other auctions" to obtain more "evidence" . . . But, the evidence is hidden . . .

Of course, if you are still unable to do this simple task, we (whoever that is!) would be forced to conclude:

1) Your rant is just that... igno-rant

2) You may not be smart enough to operate a browser at all

3) Not having a clue doesn't effect your pre- conceived beliefs, for that matter, neither do facts - provided you can find them!

4) That you have nothing better to do over the Chrismas holiday than show your ignorance (there's that word again!) by asking for easily obtained URLs . . .

Sniff, sniff . . . is that smoke that I smell?? Well, I'll be darned - looky here . . . a smoking gun . . . Quick, call 911 . . . Larry shot himself in the foot!!!

LJR

Only a million or so items under it at any one time...
Never the less...

>Then, just for kicks, do what I did . . . Search for "icom".

>Then look closely at the search results for items that don't quite fit.
>
>What? You found one? Click on it . . .
You mean:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=51423962

>Lo' and behold, a quick once thru doesn't turn up the word "icom" . . . Hmmmm,
>what if I search that single page for "icom" . . .
You do indeed get a hit, the page source code when examined contains:
>ham radio transmitter receiver collins
>drake heathkit swan military surplus audio amplifier linear CB icom
>yeasu kenwood zenith philco crosley atwater marconi morse key vibroplex
The size and color settings are such that a normal browser display
will not show it in a visable mannor.

>1) Your rant is just that... igno-rant
Alas the gentleman is correct.
This could of been addressed by presenting an example URL and the
source code for it to start with, and saved everyone some trouble,
but the fact remains he is correct.

>2) You may not be smart enough to operate a browser at all
Nope, found the example, documented the example for all to see.

>3) Not having a clue doesn't effect your pre- conceived beliefs, for that
>matter, neither do facts - provided you can find them!
As for my pre conceived beliefs, I freely admit to being quite
disappointed at what you found. Dave has been a friend for some time.
I honestly never expected he would resort to "bending" e-bays search

engine results.
As to finding the facts; I did look over the first couple of auctions
the search for seller arc5 produced without finding anything amiss.
I did *not* check every item, clearly I should of.
It would of helped if you had taken the time to post an example the
first round.

>4) That you have nothing better to do over the Chrismas holiday than show your
>ignorance (there's that word again!) by asking for easily obtained URLs . . .
I did ask, then followed the search tree, something that would of
taken hours without the key word "icom."
Failing to search 100's of past and present auctions against all the
key words you posted hardly qualifies as ignorance...
If you want to make a factual claim in Usenet, providing examples is
simply good netiquette.
Alas, it *does* qualify me as "jumping to an incorrect conclusion."
:-(

>Sniff, sniff . . . is that smoke that I smell?? Well, I'll be darned - looky
>here . . . a smoking gun . . . Quick, call 911 . . . Larry shot himself in the
>foot!!!
Yep. Sure did.
Hurts too.
What hurts worse, is finding out someone I respected has engaged in
something myself and many others would consider less than ethical.
That hurts a *lot* more than being wrong. Hell I'm wrong at least once
a day, usually before breakfast. My day often goes downhill from
that...

>PS: An apology is not required . . .
Perhaps not, but you and everybody else reading this thread deserves
one anyway:

I clearly should of spent more time researching this issue and less
time shooting off my mouth. I thought I was defending someone who was
being unjustly flamed. Well I was *wrong.*
It happens, adults apoligise and move on.

What started this little dust up remains:
Skewing search engine results is becoming a very common practice,
It happens to Yahoo, Webcrawler, Infoseek and the other meta
search engines already. now we have at least one clear example that it
is happening on e-bay. That it is common does *not* make it right.
Every time someone does this, the search engines become fractionaly
less usefull to everyone else.
Yahoo and most of the meta-engines use custom filters to try and
control the problem. Search engine results may even be influenced by
money; It is a common (but as yet unproved) belief that how high a
site appears in meta search results is a function of how many banner
ads they bought on the search engine pages. :-(
E-bay will have to start developing filters to control this practice.
I suspect many many more sellers will be playing this game shortly.

:-(
This hurts everyone: Buyers trying to find items of interest without
hunting through 1000's of listings. Sellers paying more in commissions
to cover the increased costs of more hardware and software at e-bay.
Even the stockholders as more and more buyers refuse to wade through
the crap and transactions go down. :-(
All because some people believe in taking advantage of the system.

I've just about given up on e-bay already as a seller,
haven't sold even a solid-state piece on e-bay in months.
Now I may give up as a bidder/buyer. :-(

Dave I thought I knew ya....

Hello Larry,

You are a gentleman and a scholar!!

I apologize for thinking, writing or insinuating otherwise . . .

And, my original post was really meant as hyperbole . . . tongue in cheek - not as a serious matter at all. I had hoped that the reader would recognize that! It matters not to me what a person hides in their auction presentations . . . But, I just couldn't resist posting what I had found. You have to admit, Old Dave is really pretty slick. I just couldn't figure out why those particular ones kept showing up!!

So, now the search goes:

"icom -military" !!!

Happy Holidays and Happy Searching,

LJR

PS Cheer up Larry - I like Dave better now than before - I guess I admire his ingenuity!! It could have even been an accident <grin/wink>. . . Think we should impeach him or just take away his tubes?

Body handling: HTML body converted to readable text

I'm kind of at odds on this one...seems to me that if I'm looking for an ICOM radio and a 4E26 tube or Toot-a-loop radio shows up in the search then I'm gonna just ignore it. On the other hand, me being a browsing fool, it would be nice for all pertinent labels/descriptions to lead me to what I'm looking for. But I suppose the maximum logical extension of the idea is that some clod will sell dictionaries for posting all known hidden words on eBay ads so that your item will show up no matter what the search calls for and even a search for 'worthless crap' will give a gazillion responses. Pretty slick, huh, but seems kinda self-defeating if I can't find you to buy your ICOM because I've got to search thru thousands of beanie-babies. But thats too logical and, as the spammers proclaim, 'just use your delete key' and tolerate it.

My ass!

For Sale Ten-Tec Argonaut 509 Transceiver.

Transceiver works well. Physical configuration and condition is as follows: Unit is configured with the add-on 245 CW filter PCB mounted inside the transceiver NOT in an external add on enclosure like the 208. Selection of the CW bandwidths are selected by a rotary switch located on and thru the rear panel.

Front panel is about a 7 paint wise. Paint at top edge is scratched off at numerous locations but this cannot be seen looking at the front. Control markings are fine except for the AF Gain and Power off lettering. It should be AF GAIN and POWER ON-OFF. It is .. .AIN and PO... ON-.FF Dots(...) specify incomplete of missing letters. Plastic dial is great as is the VFO knob and skirt.

Rear panel is OK but some lettering is not complete. Power in has been modified to a DC coaxial connector and antenna has been changed to a BNC.

Inside is clean.

Comes with an original manual, power cord, and hand microphone.
I am asking $190 shipped.

Please contact me direct with inquiries. Thanks...Rick...W5RH

Another way to make dial cord grip better is to get a block of
rosin from a music store (used for violin bows), and disolve a
little in alcohol to apply it to the dial cord.

John KK6IL

Brian Webb (no-spam-bmwebb@tima.com) wrote:

Hello,

I have an excellent 51J4 loaded with filters. You are most welcome to
Norway and take a look at it. Price here in Norway is usually around $500.
I have no idea what they go for "over there". Then you may take a look at
my Drake collection too, but nothing of that is for sale.

I also have a beautiful 51S1, RE with lock-knob for the VFO. Do you have
any idea what I could expect to get for that one? I maybe bring it with me
to the Dayton Hamvention in May -99 if anybody wants it. Yes, I'm coming to
Dayton!

Happy New Year,

Sindre, LA6OP

Just wondering how old a company Hallicrafter was, at least
when it first started making communications radios. The
Sky Buddy dates back to at least as early as 1938, but that's
all I have so far for a clue as to the age of the company's age.

I don't have the date, but there was an article in Ham Radio magazine
that gave a brief history of Hallicrafter's early days. Someoe with a
better organized collection of back issues might be able to look up the
article. It was after the magazine went to the large format, and might
have been in an October issue that was traditionally the Receiver Issue.

Hi All!

I'm off to snowy Stowe, New England later this week!

Are there any places nearby where I can get a Drake T4X / PSU and R4C
????????

PLEASE let me know if there is as I'm there for 2 weeks!

Cheers!

If you have a TCS-12 complete with all the cables, and the AC
power supply, I would say the package being complete would
be valuable, and in the area of $200.00 at a TOP price in
clean condition. Otherwise, somewhere in the $100-$150.00 range

For info, GC electronics (used to be known as "general cement" by the
way)
had, in the 1960's, an item called "dial cord dressing" It was like a
large crayon-like shape and was natural bee's wax.

I would think that if this item is no longer around, than some other
form of natual bee's wax would do the same thing..

Greetings Cary
I've got a Viking II thats in decent physical shape but is an excellent operating condition.
Retubed and thoroughly cleaned out in 96,
Chassis is clean as a whistle, but the face has felt the years. All the lettering is still intact, as is the Johnson logo, but the area above that had some rust which I removed and painted with a gray that doesn't quite match. Probably be easy to mask and repaint that area again if it's too offensive I'm asking 125 plus shipping from NJ
Best wishes,
Ed K.

The standard All American 5 tube lineup went from octal to miniature tubes beginning sometime in the late '40s / early '50s (anybody know for sure?). The tubes were 12BE6, 12BA6, 12AV6, 50C5 and 35W4. The 12AQ7 and 12AS7 were earlier octal functional equivalents of the 12AV6 and 12BE6.

I need the following to help complete my restoration of a TBX-2. If you can help me, surely would appreciate it:

Canvas Case CSK-10027A For TBX or Accessory Box

Canvas Case CSK-10029A For antenna sections

Antenna Reel CG-71007 Contains wire antenna

Generator Cable CG-49044A

Would also like to have an original manual

Thanks!

For sale/trade Drake R-4C receiver, S/N 18118.
No NB, no CW filters.
Radio has four additional crystals (12.6, 13.1, 21.1 & 26.1 MHz)
for 160 meters and other bands. Works very well.
Overall condition is 7 to 8 on scale of 10.
All original, very clean inside, and clean outside.
Tuning scale and tuning knob have small scratches.
No changes nor modifications.
$195 plus shipping from SF Bay area or will trade up for any
German WWII radio equipment.

Please reply to Vlad at: kb9olm@hotmail.com

Clive,
If you don't find a used one, you can check with both jewelery and dental supply houses. The dental houses discount better than jewelers' supply guys, but to get a machine with a heated tank, the dental guys would have to order it for you. Most dentists dont use heat, which really does help the scrubbing action in most applications.

I use a sonic to clean wire-wound pots, etc. I use a mix of windex and water, being careful to thouroughly rinse and dry afterwards.

Be careful with your wife's jewelery! Going from a heated tank to cold water rinse can crack stones, and some stones (rubies and emeralds, plus others) are treated with oil. The sonic will remove this oil and dull the stone. Opals in a sonic are a NO-NO. They are too soft.

I figure you want the sonic for other things, but my wife has asked me to clean her stuff before...I got good advice first!

Has anyone ever made up new (lucite?) plastic dials for both the main tuning and bandspread on a National NC183?

I have a 183 that lived in a chicken coop for over 20 years - and after getting all the bird guano off the case and inside, and doing a major cleanup, the receiver is beginning to work quite well. Lots of cap replacements of course, and heavy duty cleaning of the cabinet revealed a good finish under the bird splatter - it doesn't even need repainting!

But the dials obviously sat in the sunlight for years and years and I wonder if anyone ever silkscreened or printed up some new ones for this receiver.

Happy New Year,
Al W1UX

Monday Before Thanksgiving I sent my Mom a tv remote control via
priority mail.

I was told I couldn't trace it because it was not certified but if the
package contained merchandise I could I apply for a claim against lost
merchandise.
It got there 18 Dec ! :-(
I shipped her christmas presents FEDEX on 21 dec and the arrived on 23
Dec .

As an aside, ref UPS. We got a postcard from UPS telling us that
they were holding a package because they couldn't find the address.
I called in and told them that the address used to send the postcard,
and the address they couldn't find were one in the same.
The reply "...well sir the postcard was delievered by the us mail and
they know where everyone lives." I explained that I used UPS because
of my underwealming faith in the postal service. .... She didn't get
it.

5691. Help needed for crackly HRO tuning

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-29 00:00:00 UTC
From: key.rvmj@saqnet.co.uk
Message-ID: <368933e2.132622@news.saqnet.co.uk>
Source record: 92127

Season's greetings from the UK.

My HRO receiver has developed crackly tuning over the holiday season.

The symptoms are an enormously loud crackling noise in the speaker or headphones, when the tuning dial is rotated over a certain segment, in my case a dial setting of 50 to 100 dial units. The actual loudness depends on the coil pack in place at the time. 7 - 14 Mc/s is deafening.

I've checked for tuning capacitor plates not rubbing each other, and correct earthing for the tuning capacitor main shaft wipers. I can't think of anything else.

The tuning capacitor is the pre-war die-cast gearbox type, with the company logo picked out in red enamel, and the ends of the rotor plates are not directly connected at the ends.

I'd greatly appreciate any advice on the causes and cures for this problem.

Thanks in advance.

According to Dachis, in 'Radios by Hallicrafters,' Bill Halligan created his new enterprise in 1932 at an old manufacturing plant at 417 North State, Chicago. Sets were handcrafted in the very early days and bore the slogan "Handcraft Make Perfect," in the logo.

5694. Valve tester

Message-ID: <36895851.9380D3B0@erols.com>
Source record: 92133

1. I have a fairly nice Viking II and 122 VFO. The V-2 has some scuffing on part of the front panel, but otw, very nice. All knobs are perfect as is meter and plate tuning assy. Innards are next to perfect. The low-level interstage audio xformer is a replacement. All 'lytics and the 20K tapped wirewound have been replaced. The unit has a PTT installed. The VFO 122 is very nice.
$225 for the both, pick-up in MD/DC/VA area.

2. Viking Valiant I. Front panel very nice, cabinet re-paint with correct paint. I probably should have sanded a bit more as one can see some of the scratches showing thru in correct angle light. Insides are "ok". All 'lytics have been replaced and it has solid-state 866's, etc. It needs some work in the oscillator, however. It may need the VFO screen resistor mod. Reason for sale: Lucked out!! I got an out-of-the-box condition one at the last fest, here! Oh yeah, I've got a box of spare parts and ALL the iron from another working Valiant.. I'll throw it all in, plus copies of the book and all modification data and updated drawings! Price? $240 for the lot. Again, pick-up in the MD/VA/DC area.
73, Jeep - K3HVG

Looking for a nice SP-600JX, HQ-170A, and HQ-150

Radiofinder, ebay, Mr. Drago, it's all the same thing. Beauty, like value, is in the eye of the beholder. The detriment of people and places like this is that they drive the prices up for everything. I believe that radiofinder is the site where I saw a very nice NC183D for $500.00 and a very nice National speaker for it for the low,low price of $395.00. As for myself, I will walk away from that altogether, thank you very much...
The answer to your original question then, is, yes. There are probably those of us out there that think these are RIDICULOUS prices.

John, I have a very nice S-120. Works fine but should have
the filter replaced due to hum. Also have a Legionaire I think
it is. It is a watered down S120 with no bfo and only some
shortwave bands if I remember correctly. Anyway it is a parts
set and mostly complete. I want 50 for the S120 and will throw
in the other unit. I live near 141 and 21 in North Jefferson
County. 73, Mike K0AZ

>Taunton, Somerset.
>
>I don't have a great number to check so borrowing / begging the
>use of might be my best option.
Simon,
I have one but I'm in Nort Glos so unless you are passing in the next
few days I doubt if its any use. What comes to mind is that some months
ago I saw an article on constructing a simple valve tester. It was, I
believe, in Radio bygones. If you contact the publisher he can probably
find you the article. They do back numbers for a couple of quid.

If you are passing Stow on The Wold you are quite welcome to drop round
and test any number of valves if this doesn't help.

Regards

Robin

5706. Collectable Vintage VOM FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-29 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <mdfi2.1767$B46.3050087@newshog.newsread.com>
Source record: 92142
Cross-posted to: misc.industry.electronics.marketplace,rec.ham-radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

In my archives, I found a collectable VOM, that I have no need for.

It is a Triplett 310 "Mighty Mite" VOM. It includes a nice leather case, with Triplett imprinted on it, a set of original probes, and the original manual.

This unit looks as close to new as you would ever find. I have looked all over it and can not even find one scratch. The manual looks new, except for the possibility that the pages are not quite as white as they once were. The leather case is made so that it can go on a belt, but does not look as if it ever was on one.

I have searched the manual, but find no information as to the date it was made. My guess would be in the 50's, but that is only a guess.

$ 75 plus shipping from Florida.

Happy New Year to all.

5709. BA test gear and 5 kW audio amp FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-29 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <368948B8.EA9D3102@carroll.com>
Source record: 92145

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Techron 5000 WATT audio amplifier. Modified model 8521.Similar to Crown 7700 series. This unit was originally used to drive superconducting magnets in a Picker MRI scanner. Matches loads to 1 ohm or lower. Frequency response DC-50KHz. Output +/- 145 V 45A rms, 180A peak. <.1% THD Originally used 3-phase 480V power supply, but has been converted to run from single phase 208-240V (will run on normal household dryer/ electric stove circuit). Mounted in rollaround rack with blower cooling. Has DVM readout of output voltage/current.

Possible applications: DC servo motor driver (5 HP), Shaker/vibration table driver, ELF transmitter, Stadium size PA amplifier, world's loudest garage band, Subwoofer from hell, etc. Have all documentation/service manuals. Modifications professionally done. $1200 OBO BUYER PICKUP or LOCAL DELIVERY ONLY. (Northern NJ) Weight about 250 lbs or so.

2.) Vishay/MicroMeasurements 4-channel strain gage amplifier and power supply. Model 2110/2120. Gage excitation , balancing, cal sigs. Analog output. $75

3.) Sony VO-5600 3/4" VTR 19" rack mount commercial/broadcast quality. Excellent condition. $150

4.) Tektronix 5103 rack mount scope. Mainframe working well. Plugins (5A18/5B10) need work.
$40

5.) Tektronix C-50 scope camera with polaroid pack film back. Fits 5000/7000 series scopes. Excellent working condition. $40

6.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges. Good to 400 MHz. No slugs needed! $100

7.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

Heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz bandwidth. 5" CRT $50

8.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. HEAVY-pick up preferred, but will ship if you pay for crate! $150

9.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm outputs and level meter. $125

10.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to

3 V output (+20 dBM) into 50 ohms $100

11.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $100

12.) Box of used, tested tubes. No useless TV types. Mostly pulls from test equipment and industrial gear. 6 and 12 volt types, lots of Industrial/military types. Some audio types. Approximately 400 pieces total. Prefer pick up. $150

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

That was a good start. Now look for (tiny) metal or even oxide particles
between the plates. I have an old Pholco which grows aluminum threads on
the surface of the plates and has to be cleaned regularly.
>

One quick try is compressed air, carefully! directed between the plates.
Suspect any section with B+ on it first.

Not a typo, I have a Hammarlund HQ-180XA general coverage receiver. This is the one with the eleven switchable crystal positions. This radio is in beautiful condition. A few very, very minor paint dings on the cabinet, right around the hole used to open the top, but it is easily a 9.5 out of 10 and the paint, knobs, and electronics really shine. All original, in great working condition. No manual.

Asking $450.00 plus shipping from California.

Thanks.
Dave

I have had the chance to discuss this issue with the gentleman
involved. I believe he now understands my (and others) concerns about
this practice, and why we believe it to be a *bad thing.*
I do not expect this practice to continue, (at least with this
seller.)

He has been invited to respond in this forum. I understand that it
will be several days before he can do so, as he is traveling for the
holidays.

I hope everybody will put this whole issue behind us.
I believe the problem has been addressed and do not expect it to
appear again.

Hopefully we are not seeing the start of yet another trend.
Thank you for your time and understanding.

Bigot, n. One who obstinately and zealously attached
to an opinion that you do not entertain.

>Can anyone give me guidance before I open it up and start soldering /
>unsoldering? This must be common problem.
>
Connectors on the outside of the set can get loose and cause noise.

Inside the set, the heating and cooling of vacuum tubes may cause nearby solder connections to loosen. Before resoldering everything however, first try tightening all the solder lugs and other chassis components. Remove each tube one at a time, spray the socket with contact cleaner, and reseat the tube.

For that matter, it probably wouldn't hurt to re-align the system. Just to make sure it's still in specs.

Regards.

5728. U.S. Postal Service and Postal Money Orders

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-29 00:00:00 UTC
From: wetartie@ix.netcom.com
Message-ID: <N.122998.010107.97@rvl-md14-30.ix.netcom.com>
Source record: 92200

Thought I'd share a lesson I just learned (the hard way) regarding the use of Priority Mail and U.S. Postal Money Orders as payment for radio equipment bought through the newsgroups.

Two weeks ago, I purchased a U.S. Postal Money Order at my local post office, and sent it via Priority Mail to a seller in Florida. While mailing it at the post office, I asked the clerk how long it would take to arrive, and was told "Priority Mail arrives in 2-3 days". Three weeks later, and the seller had not received the Priority Mail envelope. He checked his local post office, but they knew nothing about it. I went back to my local post office today, their receipt for the Postal Money Order and their receipt for the Priority Mail in hand. They asked if I had Certified or Insured it, which I had not. I was informed that I could institute a "trace" of the lost envelope, which would take about 30 days, and which was not likely to locate it. Or, I could institute a "trace" of the Postal Money Order (for a fee of $2.75), which would take about 30 days...this would determine if it had been cashed. If not, I can "fill out another form", and request replacement of the Postal Money Order...but it can be replaced ONLY after 90 days have passed from the original issue date.

1/2 hour later...three forms filled out completely...the aggravation of waiting in long lines...the postal clerk "disappearing" into the back room for 10 minutes to "check which form needs to be filled out", then apologizing and telling me "good luck; next time you should Certify or Insure anything important before sending it, so at least it can be traced when it's lost".

I suppose I learned some lessons here...apparently Priority Mail isn't very high "Priority" (even tho I wasted $3.00 sending it Priority Mail... 85 cents for a Postal Money Order...and another $2.75 for USPS to "trace" a Postal Money Order they lost. A 90 day wait for replacement, and second thoughts about sending anything important in the future via USPS.

Both FedEx and UPS will be getting more of my business from now on.

Opticians and suppliers for the optical trade also carry them, the latter
sometimes even have used ones. I paid about 120 bucks for a really decent
new 60 watt unit with metal tray (about 1 quart) and timer.

But do beware of suspiciously cheap "ultra cleaners" (note the missing
"sonic"). They 'work' with mains hum. :))

Cheers,
Ralf

Part 1) Military Surplus liquidation:

The following military surplus vacuum tubes are being liquidated to the highest bidder. These are all NOS (New Old Stock) tubes that were built to military specs, and were surplused by the Canadian armed forces. It is believed all these tubes were to be used in radar units.

1) NATO Stock # 590-00-543-1907
6AV5GA made by General Electric Beam Power Tetrode

2) NATO Stock # 5960-99-000-0100
CV100

3) NATO Stock # 5960-21-462-0240
JAN-CEQ-72 made by Continental Electric

4) NATO Stock # 5960-21-883-8023
Radar Display Picture Tube made by AEG p/n 4169B
16ï¿½ diameter and 24ï¿½ long, packed weight is 15.75 kg

Pictures of 2), 3), and 4) are available through email if needed. Feel free to make any offer you wish, these tubes will be going to a new home

regardless of price on January 15, 1999. Reasonable offers may be accepted prior to the liquidation date, otherwise the highest bidder will be the new owner. The purchaser is responsible for all shipping and

duty charges.

Part 2) Other tubes

Here are the numbers of tubes I have available at present.
NOS/Used

Seimens F2A 8/14
Seimens ZZ1040 15/15
Seimens ECC40 2/-
Seimens 108C1 3/2
Seimens E80F 4/7

Why not fix it yourself? Take it out of the cabinet, see what smoked (it should be obvious, most likely a resistor). Replace the part and find out what caused it to smoke - usually a shorted capacitor. Replace that part also. Antique Radio Supply (www.tubesandmore.com) probably has any part you need, including a power transformer. Good luck!

Yes you are right when someone who has something of the same item that causes an inflated value but again we have supply demand how mint it is and working condition also its like anything else when you are selling you always can go down in price hard to go up.I dont think we have the right to tell anybody what to ask for there items for sale but we do have a right to make an offer or offer trades or what ever all the other person can do is accept or reject or counter offer.I have asked prices for items(I play with Military Stuff)and had commets like I can get it cheaper at Dayton well that to me me is a dumb statement.But it would be better to say I cant spend that much and make an offer.Well Joel has good stuff and stands behind it again thats worth something and if he has something you would like I guess the best thing to do is contact him an make offers and try to buy it.PLease lets not price Police peoples items openly in this forum it would be better to take it up with seller by email or Tx.

Source record: 92071

The USPS name for "Priority Mail" has always been a misnomer, although they advertise it as such.

Priority Mail by definition by the USPS has always been a weight-driven rate. For example, over years ago anything that weighed over 16 oz thru 32 oz went at a flat rate. This flat rate was (and, still is) the Priority Mail rate. Thus, Priority Mail has always been the USPS name for the flat-rate First Class Mail postage rate. It really doesn't have anything to do with "Priority." However, a few years ago, the USPS decided it would advertise Priority Mail as an alternative to UPS Blue (2nd Day Air). However, it is not, and should not be construed as the same, because at present Priority Mail is not assigned a bar-coded tracking number. According to the USPS, they will implement a tracking system for Priority Mail sometime in the near future.

Thus, everyone should really look at Priority Mail as nothing other than a flate-rate version of good old First Class Mail.

> B.A.

The bottom line is that the prices of boatanchors are going up and will continue to go up and all the whining and gnashing of teeth will not change this. The days of going to a hamfest and getting a 75-A4 for $100 are long gone. My advice is to hang on to what you have, because if you sell it, it will cost you four times as much later to get another one just like it.

Nobody likes to find out that their hobby is getting expensive, but what separates the men from the boys is how they deal with it.

I have a Knight T - 60 transmitter that I have no use for. The condition is what I would consider good. The 6HF8 tube is bad, the others check good. I have not replaced the electrolytics (three). The 6DQ6B plate lead is soldered on (plate cap connector is missing) but should work fine. The chassis has a few corrosion spots on it along back edge. The case looks good, a few minor rust spots on back and one side some of the paint (in spots has chipped off. I will ship insured parcel post from Florida to anywhere in 48 states for $75. Art.

Can't take the kids to see their grandparents without
the back-shooters and snipers crawling out.
I finally got the chance to read the entire usenet thread.

Nice "joke" there, LJR- Smearing someone all over usenet.
Really funny....

Let me tell you what "unethical" is--
"Unethical" is making an accusation against someone
before thousands of people when you don't know the facts.
Even a murderer gets to tell his side before judgement,
and I didn't even get that consideration.

Of course I want more people to see my listings, but that's
not the only reason I gave this a try.
I sought both to help myself and to help the community
by finding an alternative to advertising on usenet.
If people weren't interested, they just wouldn't click on it.
You'll note I have ten auctions going and
no FA notices on usenet. I tried to pick
only words that would bring "radio-interested" people,
who usually are interested in more then one type item.
So I think I did try to be ethical, even if I was in error.
Being "wrong" about a new idea doesn't make me a crook or
scammer, but now I get to wear that label..

You can't un-accused someone anymore then you can
un-ring a bell. That's human nature. Accusation
automatic conveys guilt in most people's minds.
I'll just have to work harder
to prove I deal honestly.
Unfortunately, many people like to feel better
about themselves by damning others. They
will continue running their mouth.
Nice chirstmas gift. Thanks.

I wrote Ebay about this practice before I left to
take the kids to grandma's for xmas. They just wrote back
and said they'd prefer people not do it. So it's a
moot point now.

Tell ya what. I'm going to do just exactly what I think is
right and proper at any given time and, certain as sunshine,
some people are going to whine and moan about it. So be it.
I'll ignore them. If I think FA listings are proper
that's what I'll do, etc.

Those that know me, know what kind of man I am.
Those that condemn me without knowing me
have shown what kind of people they are.
I don't need to say any more about them.

Regards,
David Stinson AB5S

To the anon-coward "nc183d@aol.com," George KB5WWO, and other Price-cops:

You had your chance to study hard in high school so you could have received an academic scholarship to the best of universities, earned your degree, worked diligently, and saved up enough disposable income so as to afford any equipment you might desire. Instead, you publicly complain about someone's "asking price" (rather than emailing the seller a counter-offer) leading us to conclude some not-so-complimentary thoughts regarding your work ethic, lack of saving-ability, and/or your lack of bargaining prowess.

Let me emphasize that any price you see is an asking price; the seller is expecting a lower counter-offer. There is no need to whine in public that you can't afford his asking price - it makes you look foolish.

72.5,
Jeff KH6OO / 7

(For Sale: Outdoor community warning siren [also known as an "air-raid" or "civil defense" siren], Federal model SD-10, 10 HP motor, 240 volts, 54 amps, dual-tone, 110 dB @ 100 feet rating, pick-up from Minden NV [300+ lbs], $900. > DOES ANYONE ELSE think that the RADIOFINDERS PRICES ARE A JOKE.

No, having been in the hi-fi business (2 stores) I've learned that it costs a lot more to do business than most people think.

I've got an HRO-600 that I bought for $1500 a bunch of years ago, used, which has stopped working.
The cheapest quote for repairs I got was $1K.
Would I then sell this fixed for less than $2.5K ? Of course not.

Let's say I have a store...
$2000 a month rent
$300 for utilities
$500 for misc
$2500 a month for me
That's $5300 a month just to open the door!!
How about a helper. $1500, how about borrowing $30K to get started...the bank wants interest and principal payments....another $1.5K a month
By the time I get finished, I'm spending $10K a month just for nothing. So I buy a radio for $500; I gotta get $1K for it at retail TWENTY TIMES THAT MONTH just to cover overhead.

Another way to look at it. My first S-38 was about $62 new (funny how you remember things like that). That was about 2/3rds of my salary in those days ($85/wk).
A used S-38 is still under $100, but it's a smaller percentage of my weekly pay now.

Look at the SX-73 (R-274) Hallicrafters. It was $975 NEW
It's about the same now...give or take.

What's the gripe?

Analyses like the one below really are an argument for a "fair" price; however, there *is* no such thing as a "fair" price. As long as people can get HRO-600s for less than $2500 then you will never sell yours (except to an uninformed buyer), regardless of how much you spent on it, and how much rent you pay, and etc. When the price of HRO-600s rises to the neighborhood of $2500 then you'll be able to sell yours. The market doesn't *care* how much you pay for rent and utilities and repairs and etc., except to the extent that as other sellers experience similar costs then more of them will also hold out for higher prices, which will drive up the market price (everything else being equal, which it never is!).

73,
Mike, KK6GM

Hi All
I found my AM station the other day, one of those times being in the right place at the right time. So the present restoration project needs to find a home. 1947 project using pr 304TLs in PP w/ B & W kw tank, plug in coils (HDVLs) & sockets. Chassis & panel complete with tank, sockets, fil transf, & meters. I have enuf HDVL coils to cover 160-10m. Some in parts but easily make a set. Have only 1 BVL coil (grid side) & that for 40m.
Price; $125. for all above. Cant ship. Someone in Md., Va, or Carolinas.

Also have enuf parts to make a complete power supply. Might have a modulation trans also that does 500watts.
Might trade for NOS or proven good 4-400s ++

I have to agree with you guys,these people are a joke.He had a CE 100V for a cheap price of $2000. At that cheap price I think I will buy 2 of them. People like that is just making the BA collectors disgusted with them. I don't see how any of these guys sell anything,I guess there are fools like them around. Collin gear is getting just as bad.

From: wabate@erols.com
Message-ID: <368bae51.31163840@news.erols.com>
Source record: 92160

I have a very nice Drake, TR-4C for sale with AC-4 power supply and MS-4 speaker. The transmitter and receiver have recently been aligned. There are three new finals in the transmitter. 80M output is 200 watts and 10M output is 140 watts.

The receiver exceeds the original sensitivity specs. The power supply has been recapped.

The front panel is excellent with only a few minor scratches that are hard to see. One knob is cracked but has been epoxied. The sides of the cabinet are just as good as the face. The speaker face is fine but the speaker cabinet has more noticable scratches. The S-meter is frosted somewhat but you can still read it.

Price is $350 plus split the shipping in conUS from 19001. This is a great rig in top condition. Email with any questions. On air tests can be arranged.

Bill Abate

Yeah, it's a free country and all that, but it galls me all the same. Joel wanted $1450 for a Drake 4-B station (TX4B, R4B w/all crystals, AC-4, MS-4) a while back. As 'mint' as I'm sure it was, that is excessive. The price creates the false impression of sudden, great scarcity and drives others to try to ask/wait/hold out for that much. Of all things, hams, and boatanchor-loving hams in particular, ought to be a bit more than well-off appliance operators (god forbid one should actually *operate* such a precious radio!)

It's a rare surprise to see a nice piece of craftsmanship for auction
on ebay (ack ptui) at a fair price.

Right now it's at $53, and the parts alone are worth that.

No, I ain't a shill. If you need a tuner or some kilowatt-class
tank circuit parts and don't mind using ebay (ack ptui), you might
take a look.

5792. Heathkit HW-5400 for sale as is

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-31 00:00:00 UTC
From: "Walter S. Delesandri" <walt@jove.acs.unt.edu>
Message-ID: <76gbk5$87j@hermes.acs.unt.edu>
Source record: 91971
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale:
Heathkit HW 5400 tranceiver that was never completed....it is
about 80% built, and the owner got through the firsts tests
in the book successfully....PA is finished and works, If you have
a beat up looking radio, this one has NICE panel and covers,
as well as a (nearly) self-contained 100+ W PA that is
finished nicely.

CAUTION!!!! It's NOT all there - at least one (finished) board is
missing.....I was going to try and finish it (with a junker) but
never got around to it with my 5000 other projects.

$100 shipped (it's HEAVY for a tiny unit....)
includes >one< of the two manuals I believe it came with.....
Would also trade for bug key or small but NICE tuner with
meters, perhaps nice 2M handheld (older) WITH tone encoder,
or what have you?

Thanks, Walt WB5LJW

Not to expand this discussion beyond the subject, but I carpool with 2 fairly serious Lionel train aficionados. Lionel trains have gone through the much the same collector and value cycle that the boatanchors are going through now. At several of the last train meets, they have noted (and is the topic of discussion) that the value(s) may be shortly or have already topped out. The rampant inflation of prices have virtually stopped. At the meets, dealers (ersatz or otherwise) tables go wanting for customers owing to the current "asking" prices. I suspect that boatanchors prices will also flatten out. Our market is not infinite and the "new breed" is, more often that not, simply not interested in equipment of yore; not the equipment nor the technology associated with it. Maybe in another 10 or 20 years, we (they, not us) will see 'A-4's and such sitting in piles with "Any Offer?" tags on them. Imagine the concept! Joel may ask his price while the sun shines.

1. Old GE Progress Line tube radios are full of them.
2. Several relays use this base, and the females are available from parts
houses which sell relays.
3. I believe they are still in the current Amphenol consumer connector
catalog, so check Allied, Newark, and Mouser.

Aye, there's the rub... People who "invested" the money years ago, for some reason, feel they should be able to get that back and then some. What most do not realize is that electronics equipment is rarely an investment. For some reason, keeping some old crap in the garage for twenty or thirty years somehow makes it valuable. Try getting anything at all for a $3500 IBM PC that was built in 1984.

5808. Trade Collins 312 B3 for LS-206A/U Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-31 00:00:00 UTC
From: Bill Fairbanks <BILLFAIRBANKS@worldnet.att.net>
Message-ID: <01be3510$d3cf9c60$929d4d0c@default>
Source record: 91987

Have a Collins speaker 312 B3 that I would consider trading
for a LS-206A/U Military speaker unit. The LS-206A/U was
used with the ANGRC26D transmitter and other mil comm
set ups. Needs to be in working order with a decent front panel.

The 312 B3 is in very good shape and works great! It has some
very small scratches but displays well. I don't think anybody
would be disappointed.

Contact me if seriously interested. Can email pics.

Bill Fairbanks

Actually, if it's an original IBM PC built in '84 it's worth more than you
think!

5811. halicrafters SX-43 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-12-31 00:00:00 UTC
From: mark beutler <mbeutler@tds.net>
Message-ID: <368C484B.9E5C8CFF@tds.net>
Source record: 91990

Could someone please tell me a little about this radio? It appears that it has FM reception as well as MW/SW. Does anybody know if it has SSB and how it performs? ie: selectivity, sensitivity, etc.

Any help would be appreciated.

I have a Knight Kit R-100A reciever, with a nice copy of the manual for sale. It doesn't have the S-meter option, but it is in good shape. I put photos on my web page. The URLs are:
http://www.wwc.edu/~frohro/Knight/R100A.jpg and
http://www.wwc.edu/~frohro/Knight/R100A_back.jpg
I'd like $75 plus shipping from 99324. If you don't think this is a fair price, make me an offer.

73,

Rob, KL7NA/W7

All,

I'm trying to find a source for the old 2 pin Mic connectors used on a lot of the old boatanchors. It manufacture and part number is Amphenol 80MC2M. If anyone knows where I can get some then please email me. Be sure to use the correct email address and thanks in advance.

Trade my Drake TR-4 with matching power supply/speaker
in very good unmodified original conditional for your
National NC-270 in equal condition. I am just not much
into ssb rigs. I primarily collect am tube gear. The
TR-4 works great.

>As long as people can get HRO-600s for less than $2500 then you
>will never sell yours (except to an uninformed buyer), regardless
>of how much you spent on it, and how much rent you pay, and etc.
Perhaps, but there is a vast difference in units, sometimes to the point that I think they really aren't the same item anymore. For example, a hamfest "needs work" (often a euphemism for decades of neglect or abuse) HRO-600 purchased from a stranger isn't the same product as a professionally restored to mint condition HRO-600 from a vendor who is willing to guarantee that it works on arrival + a warrantee period. In the latter case, one is buying more than just the bare HRO-600, but the research, labor and support guarantee as well. For those (not including me) with enough money to lavish on people & things they love, it may be a bargain even at a really high dollar-amount.
Happy New Year to all!

I do not think you should have used the HRO-600 as an example. From the sounds of all the replies it is obvious people do not realize what it is. It has to be one of the rarest, relatively modern, radios around. As far as prices, anyone can ask what they want. Obviously they must be getting it as they are in the business to move stuff and not sit on it. It only hurts them if their prices are such that they get no interested parties. I am not justifying the numbers one way or another, just saying that the negative comments are just as detrimental to the hobby, or more so, and also displays a lot of ignorance or jealousy. 73 & Happy New Year - Mike

Greetings
I have a Viking II available, but am looking for a local sale to avoid packing and shipping hassles. I'm in southern NJ, and asking 125 as a firm price.
A second advantage for a local sale is the opportunity to run the item before taking it home, and the chance that some other gear may go with it !!!
Best wishes, and holiday greetings
